Table of Contents	3
1 Structure of the Bachelor Programme in Economics Engineering (B.Sc.)	9
2 Key Skills	10
3 Module Handbook - a helpful guide throughout the studies	12
4 Actual Changes	15
5 Modules (Foundation)	17
5.1 All Subjects	17
TVWL1VWL- Economics	17
TVWL1BWL- Business Administration	18
TVWL1INFO- Introduction to Informatics	19
TVWL1OR- Introduction to Operations Research	20
TVWL1JURA1- Introduction to Civil Law	21
TVWL1JURA3- Constitutional and Administrative Law	22
TVWL1MATH- Mathematics	23
TVWL1STAT- Statistics	24
TVWL1NW1- Physics	25
TVWL1NW2- Chemistry	26
6 Modules (Specialization)	27
6.1 Economics	27
TVWL3VWL1- Applied Game Theory	27
TVWL3VWL4- Strategic Games	28
TVWL3VWL3- International Economics	29
TVWL3VWL6- Microeconomic Theory	30
TVWL3VWL8- Macroeconomic Theory	31
TVWL3VWL9- Public Finance	32
TVWL3VWL7- Econometrics and Economics	33
6.2 Business Administration	34
TVWL3BWLOOW1- Sustainable Construction	34
TVWL3BWLOOW2- Real Estate Management	35
TVWL3BWLISM1- eBusiness and Servicemanagement	36
TVWL3BWLISM2- Supply Chain Management	37
TVWL3BWLISM3- eFinance	38
TVWL3BWLISM4- CRM and Service Management	39
TVWL3BWLISM5- Specialization in Customer Relationship Management	40
TVWL3BWLFBV1- Essentials of Finance	41
TVWL3BWLFBV2- Insurance: Calculation and Control	42
TVWL3BWLFBV3- Risk and Insurance Management	43
TVWL3BWLFBV4- Insurance Markets and Management	44
TVWL3BWLFBV5- Topics in Finance I	45
TVWL3BWLFBV6- Topics in Finance II	46
TVWL3BWL MAR- Foundations of Marketing	47
TVWL3BWL UO1- Strategy and Organization	48
TVWL3BWL IIP- Industrial Production I	49
TVWL IIP2- Energy Economics	50
6.3 Informatics	51
TVWL3INFO1- Emphasis Informatics	51
TVWL3INFO2- Electives in Informatic	52
6.4 Operations Research	53
TVWL3OR5- Applications of Operations Research	53
TVWL3OR6- Methodical Foundations of OR	54
TVWL3OR7- Stochastic Methods and Simulation	55

6.5	Statistics	56
	TVWL3STAT- Statistical Applications of Financial Risk Management	56
6.6	Natural and Engineering Sciences	57
	TVWL3INGMB13- Introduction to Technical Logistics	57
	TVWL3INGMB10- Production Engineering I	58
	TVWL3INGMB4- Production Engineering II	59
	TVWL3INGMB16- Combustion Engines	60
	TVWL3INGMB17- Engine Development	61
	TVWL3INGMB21- Product Lifecycle Management	62
	TVWL3INGETIT1- Electrical Power Engineering	63
	TVWL3INGBGU1- Fundamentals of Spatial and Infrastructural Development	64
	TVWL3INGBGU2- Foundations of Guided Systems	65
	TVWL3INGINTER1- Understanding and Prediction of Disasters I	66
	TVWL3INGINTER4- Understanding and Prediction of Disasters II	67
	TVWL3INGINTER3- Safety Science I	68
	TVWL3INGINTER2- Safety Science II	69
6.7	Law	70
	TVWL3JURA2- Commercial Law	70
	TVWL3JURA4- Intellectual Property Law	71
	TVWL3JURA5- Private Business Law	72
	TVWL3JURA6- Public Business Law	73
6.8	Sociology	74
	TVWL3SOZ- Sociology/Empirical Social Research	74
	TVWL3SOZ2- Qualitative Social Research	75
6.9	General Modules	76
	TVWL3SEM- Seminar Module	76
	TVWL3EXPRAK- Internship	78
	TVWL3THESIS- Bachelor Thesis	80
7	Courses	81
7.1	Foundation	81
	25512- Economics I: Microeconomics	81
	25014- Economics II: Macroeconomics	82
	25016- Economics III: Introduction in Econometrics	83
	25002/25003- Financial Accounting and Cost Accounting	84
	25023- Business Administration and Management Science A	85
	25024/25025- Business Administration and Management Science B	86
	25026/25027- Business Administration and Management Science C	87
	25030- Introduction to Programming with Java	89
	25074- Foundations of Informatics I	90
	25076- Foundations of Informatics II	91

1 Structure of the Bachelor Programme in Economics Engineering (B.Sc.)

The bachelor programme in Economics Engineering (B.Sc.) has 6 terms and consists of 180 credits (CP) including internship and bachelor thesis. Terms 1 to 3 (and parts of term 4) of the programme are methodologically oriented and provide the student with the foundations of economic, business and natural science. Terms 4 to 6 aim at the specialization and application of this knowledge.

Figure 1 shows the structure of the subjects and CPs allocated to the subjects. According to the European Credit Transfer System, one credit corresponds to a workload of 30 hours.

Economics Engineering (B.Sc.)									
Semester	Core Programme								
	Compulsory							Elective	
Subject	BA	EC	INFO	OR	LAW	MATH	STAT	PHYS	CHEM

4	EC	EC	BA	Seminar + KS	EC	BA	LAW o. SOCIO	INFO	OR	ENG/NS
5	9 CP	9 CP	9 CP	6 + 3 CP	9 CP	9 CP	9 CP	9 CP	9 CP	9 CP
6	Bachelor Thesis 12 CP									
182 CP (Core Programme + Specialization Programme + Bachelorarbeit)										

Abbildung 1: Structure of the Bachelor Programme (Recommendation)

In the specialization studies of the bachelor programme the student has to choose two elective modules of the following disciplines: Informatics, operations research, business science, economics, engineering/natural science, law or sociology. In principle, both elective modules are also available in one discipline. Thereby it is only allowed to choose either one module in law or in sociology. Furthermore, the student has to attend two seminars with a minimum of six CP within the seminar module. In addition to the key skills gained in the seminars (3 CP), the student has to acquire additional key skills totalling at least 3 credits.

It is left to the student's individual curriculum (taking into account the examination and module regulations), in which terms the chosen modules will be started and completed. However, it is highly recommended to follow the proposed structure and schedule of the first 4 terms and to complete all courses and seminars before beginning the bachelor thesis.

2 Key Skills

The bachelor programme *Economics Engineering (B.Sc.)* at the Faculty of Economics and Business Engineering distinguishes itself by an exceptionally high level of interdisciplinarity. With the combination of business science, economics, informatics, operations research, mathematics as well as engineering and natural science, the integration of knowledge of different disciplines is an inherent element of the programme. As a result, interdisciplinary and connected thinking is encouraged in a natural way. Furthermore, tutor programs with more than 20 semester periods per week contribute significantly to the development of key skills in the bachelor programme. The integrative taught key skills, which are acquired throughout the entire programme, can be classified into the following fields:

Soft skills

1. Team work, social communication and creativity techniques
2. Presentations and presentation techniques
3. Logical and systematical arguing and writing

Enabling skills

1. Decision making in business context
2. Project management competences
3. Fundamentals of business science
4. English as a foreign language

Orientalional knowledge

1. Acquisition of interdisciplinary knowledge
2. Institutional knowledge about economic and legal systems
3. Knowledge about international organisations
4. Media, technology and innovation

The integrative acquisition of key skills especially takes place in several compulsory courses during the bachelor programme, namely

1. Basic program in economics and business science
2. Seminar module
3. Mentoring of the bachelor thesis
4. Internship
5. Business science, economics and informatics modules

Figure 2 shows the classification of key skills within the bachelor programme at a glance.

Besides the integrated key skills, the additive acquisition of key skills, which are totalling at least three credits within the seminar module, is scheduled. A list of recommended courses and seminars will be published online for the additive acquisition. This list is coordinated with the House of Competence.

Art der Schlüsselqualifikation	Bachelorstudium						
	Grundprogramm			Vertiefungsprogramm			
	REWE BWL A	BWL B, C VWL I, II	Tutoren- programm	BWL, VWL, INFO	Seminar	Bachelor- arbeit	Betriebs- praktikum

Medien, Technik und Innovation		x		x			

(x)*.....ist nicht zwingend SQ-vermittelnd; hängt von der Art der Aktivität ab (z.B. Auslandspraktikum, thematische Ausrichtung der Bachelorarbeit)

Abbildung 2: Key Skills

3 Module Handbook - a helpful guide throughout the studies

The programme exists of several **subjects** (e.g. business administration, economics, operations research). Every subject is split into **modules** and every module itself exists of one or more interrelated **courses**. The extent of every module is indicated by credit points (CP), which will be credited after the successful completion of the module. Some of the modules are **obligatory**. According to the interdisciplinary character of the programme, a great variety of **individual specialization and deepening possibilities** exists for a large number of modules. This enables the student to customize content and time schedule of the programme according to personal needs, interest and job perspective. The **module handbook** describes the modules belonging to the programme. It describes:

- the structure of the modules
- the extent (in CP),
- the dependencies of the modules,
- the learning outcomes,
- the assessment and examinations.

The module handbook serves as a necessary orientation and as a helpful guide throughout the studies. The module handbook does not replace the **course catalogue**, which provides important information concerning each semester and variable course details (e.g. time and location of the course).

Begin and completion of a module

Every module and every course is allowed to be credited only once. The decision whether the course is assigned to one module or the other (e.g. if a course is selectable in two or more modules) is made by the student at the time of signing in for the corresponding exam. The module is **succeeded**, if the general exam of the module and/or if all of its relevant partial exams have been passed (grade min 4.0). In order to that the minimum requirement of credits of this module have been met.

General exams and partial exams

The module exam can be taken in a general exam or several partial exams. If the module exam is offered as a **general exam**, the entire content of the module will be reviewed in a single exam. If the module exam exists of **partial exams**, the content of each course will be reviewed in corresponding partial exams. The registration for the examinations takes place online via the self-service function for students. The following functions can be accessed on <https://studium.kit.edu/meinsemester/Seiten/pruefungsanmeldung.aspx>:

- Sign in and sign off exams
- Retrieve examination results
- Print transcript of records

For further and more detailed information also see https://zvwgate.zvw.uni-karlsruhe.de/download/leitfaden_studierende.pdf

Repeating exams

Principally, a failed exam can repeated only once. If the **repeat examination** (including an eventually provided verbal repeat examination) will be failed as well, the **examination claim** is lost. Requests for a second repetition of an exam require the approval of the examination committee. A request for a second repetition has to be made without delay after loosing the examination claim. A counseling interview is mandatory. For further information see <http://www.wiwi.kit.edu/serviceHinweise.php>.

Bonus accomplishments and additional accomplishments

Bonus accomplishments can be achieved on the basis of entire modules or within modules, if there are alternatives at choice. Bonus accomplishments can improve the module grade and overall grade by taking into account only the best possible combination of all courses when calculating the grades. The student has to declare a Bonus accomplishment as such at the time of registration for the exams. Exams, which have been registered as Bonus accomplishments, are subject to examination regulations. Therefore, a failed exam has to be repeated. Failing the repeat examination implies the loss of the examination claim.

Additional accomplishments are voluntarily taken exams, which have no impact on the overall grade of the student

and can take place on the level of single courses or on entire modules. It is also mandatory to declare an additional accomplishment as such at the time of registration for an exam. Up to 2 modules with a minimum of 9 CP may appear additionally in the certificate. After the approval of the examination committee, it is also possible to include modules in the certificate, which are not defined in the module handbook. Single additional courses will be recorded in the transcript of records. Courses and modules, which have been declared as bonus accomplishments, can be changed to additional accomplishments.

Further information

More detailed information about the legal and general conditions of the programme can be found in the examination regulation of the programme (in the appendix).

Used abbreviations

LP/CP	Credit Points/ECTS	Leistungspunkte/ECTS

4 Actual Changes

Important changes are pointed out in this section in order to provide a better orientation. Although this process was done with great care, other/minor changes may exist.

Microeconomic Theory [TVWL3VWL6] (S. 30)

Anmerkungen

The lecture *Advanced Topics in Economic Theory* [25527] was formerly named *Advanced Microeconomic Theory*.

Supply Chain Management [TVWL3BWLISM2] (S. 37)

Anmerkungen

The current seminar courses for this semester, which are complementary to this module, are listed on following webpage: the <http://www.im.uni-karlsruhe.de/lehre>

The course *Management of Business Networks (Introduction)* was added to the module.

The course *Quantitative Methods for Supply Chain Risk Management* was added to the module.

The course *Tactical and Operational Supply Chain Management* [25488] was added to the module.

The course *Logistics - Organisation, Design, and Control of Logistic Systems* was formerly named *Logistics*.

Insurance Markets and Management [TVWL3BWLFBV4] (S. 44)

Anmerkungen

The course *Insurance Marketing* [26323] is offered irregularly. For further information, see: <http://insurance.fbv.uni-karlsruhe.de>

The course *Insurance Contract Law* [26360] will not be held any more after winter term 2009/10. There will be no more exams for this course after the exam period of summer term 2010.

The courses *International Risk Transfer* and *Current Issues in the Insurance Industry* have been added to the module.

This module was formerly named *Insurance Management*.

Strategy and Organization [TVWL3BWLUE01] (S. 48)

Anmerkungen

Introduction to Technical Logistics [TVWL3INGMB13] (S. 57)

Anmerkungen

The course *Technical Logistics I* was formerly known as *Fundamentals of Technical Logistics* and will be held in the winter term and will have 5 credit points.

The course *Material Flow in Logistic Systems* was formerly known as *Materialflow*.

The course *International Production and Logistics* will not be offered any more. Final examinations take place in september 2010.

All courses with two lecture hours per week have 4 CP.

Product Lifecycle Management [TVWL3INGMB21] (S. 62)

Anmerkungen

The course *Efficient Creativity - Processes and Methods within the Automotive Industry* was added to the module.

Electrical Power Engineering [TVWL3INGETIT1] (S. 63)

Anmerkungen

The course *Power Network Analysis* was formerly known as *Electric Power System Engineering I*.

Safety Science I [TVWLINGINTER3] (S. 68)

Anmerkungen

In agreement with the coordinator of the module other suitable courses than the ones displayed can be taken.

From the winter term 2010/2011 on, the lecture *Safety Engineering* has 3 credit points.

Safety Science II [TVWLINGINTER2] (S. 69)

Anmerkungen

From the winter term 2010/2011 on, the lecture *Safety Engineering* has 3 credit points.

International Production and Logistics [21692] (S. 141)**Anmerkungen**

The lecture will not be offered any more. Final examinations take place in september 2010. From the winter term 2010/11 on, a successor lecture will be held.

Advanced Topics in Economic Theory [25527] (S. 201)**Anmerkungen**

The lecture will be offered in the summer term 2010 for the first time.
Up to now, the lecture was named *Advanced Microeconomic Theory*.

Insurance Contract Law [26360] (S. 242)**Anmerkungen**

Block course. To attend the course please register at the secretariat of the chair of insurance science.
The course will not be held any more after winter term 2009/10, the exam will not be offered after the exam period of summer term 2010.

Power Network Analysis [23371/23373] (S. 273)**Anmerkungen**

The course was formerly known as *Electric Power System Engineering I*.

Systems for Electrical Energy [23391/23393] (S. 274)**Anmerkungen**

From the summer term 2010 on, the course will be held in the summer term and reduced to 4.5 CP.

5 Modules (Foundation)

5.1 All Subjects

Module: Economics

Module key: [TVWL1VWL]

Subject: Economics

Module coordination: Clemens Puppe

Credit points (CP): 15

Learning Control / Examinations

The assessment mix of each course of this module is defined for each course separately. The final mark for the module is the average of the marks for each course weighted by the credits of the course.

Notice: The lecture *Economics I: Microeconomics* [25012] is part of the preliminary examination concerning § 8(1) of the examination regulation. This examination must be passed until the end of the examination period of the second semester. Any Re-examinations has to be passed until the end of the examination period of the third semester. Otherwise the examination claim will be lost.

Prerequisites

None.

Conditions

None.

25014	Economics II: Macroeconomics (S. 82)	3/0/2	S	5	B. Wigger
25016	Economics III: Introduction in Econometrics (S. 83)	2/2	S	5	M. Höchstötter

Module: Business Administration

Module key: [TVWL1BWL]

Subject: Business Administration

Module coordination: Marliese Uhrig-Homburg, Martin E. Ruckes, Thomas Burdelski

Credit points (CP): 15

Learning Control / Examinations

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module. The examinations take place at the beginning of the recess period. Re-examinations are offered at every ordinary examination date. The assessment procedures of each course of this module is defined for each course separately. The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None.

Conditions

It is strongly recommended to attend the courses in the following sequence:

1st term: *Financial Accounting and Cost Accounting* [25002/25003] and *Business Administration and Management Science A* [25023]

2nd term: *Business Administration and Management Science B* [25024/25025]

3rd term: *Business Administration and Management Science C* [25026/25027]

Learning Outcomes

The student

- has core skills in business administration in particular with respect to decision making and model based view of corporations
- masters the fundamentals of managerial and financial accounting as well as business administration
- is able to analyse and assess the central tasks, functions and decisions in modern corporations

This module sets the base for advanced courses in the field of business administration and management science.

Content

This module provides the fundamentals of managerial and financial accounting as well as business administration and management science. Then, the module focuses on the fields of marketing, production economics, information engineering and management, management and organization, investment and finance and the german specific term controlling.

Courses in module *Business Administration* [TVWL1BWL]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25002/25003	Financial Accounting and Cost Accounting (S. 84)	2/2	W	4	T. Burdelski
25023	Business Administration and Management Science A (S. 85)	2	W	3	T. Burdelski
25024/25025	Business Administration and Management Science B (S. 86)	2/0/2	S	4	W. Gaul, T. Lützkendorf, A. Geyer-Schulz, C. Weinhardt, T. Burdelski
25026/25027	Business Administration and Management Science C (S. 87)	2/0/2	W	4	H. Lindstädt, M. Ruckes, M. Uhrig-Homburg, T. Burdelski

Module: Introduction to Informatics**Module key: [TVWL1INFO]****Subject:** Informatics**Module coordination:** Hartmut Schmeck, Rudi Studer, Detlef Seese**Credit points (CP):** 15**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2), 1 and 3 of the examination regulation) of the single courses of this module.

The examinations are offered every semester. Re-examinations are offered at every ordinary examination date.

- Introduction to Programming with Java
Compulsory tests in the computer lab
Written exam resp. computer-based exam (120 min)
The successful completion of the compulsory tests in the computer lab is prerequisites for admission to the written resp. computer-based exam.
Those admission to the exam is only valid for the current main exam (in winter term) and the following exam (in summer term)
- Foundations of Informatics I
Written exam in the first week of the recess period (60 min)
- Foundations of Informatics II
Written exam in the first week of the recess period (90 min)
It is possible to gain 0,3-0.4 grading points to the written exam by successful participation in the exercises (achieving a minimum number of points received for solutions to the exercises), or by successful completion of a bonus exam (both according to Section 4 (2), 3 of the examination regulation).

When every singled examination is passed, the overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None.

Conditions

It is strongly recommended to attend the courses in the following sequence: *Introduction to Programming with Java* [25030], *Foundations of Informatics I* [25074] *Foundations of Informatics II* [25076]

Learning Outcomes

The student

- knows the main principles, methods and systems of computer science,
- can use this knowledge for applications in advanced computer science courses and other areas for situation-adequate problem solving,
- is capable of finding strategic and creative responses in the search for solutions to well defined, concrete, and abstract problems.

The student can deepen the learned concepts, methods, and systems of computer science in advanced computer science lectures.

Content**Courses in module *Introduction to Informatics* [TVWL1INFO]**

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25030	Introduction to Programming with Java (S. 89)	3/1/2	W	5	D. Seese
25074	Foundations of Informatics I (S. 90)	2/2	S	5	R. Studer, S. Rudolph
25076	Foundations of Informatics II (S. 91)	3/1	W	5	H. Schmeck

Module: Introduction to Operations Research

Module key: [TVWL1OR]

Subject: Operations Research

Module coordination: Stefan Nickel, Oliver Stein, Karl-Heinz Waldmann

Credit points (CP): 9

Learning Control / Examinations

The assessment of the module is carried out by a written examination (120 minutes) according to Section 4(2), 1 of the examination regulation.

In each term (usually in March and July), one examination is held for both courses.

The overall grade of the module is the grade of the written examination.

Prerequisites

Mathematics I und II. Programming knowledge for computing exercises.

Conditions

It is strongly recommended to attend the course *Introduction to Operations Research I* [25040] before attending the course *Introduction to Operations Research II* [25043].

Learning Outcomes

The student

- names and describes basic notions of the essential topics in Operations Research (Linear programming, graphs and networks, integer and combinatorial optimization, nonlinear programming, dynamic programming and stochastic models),
- knows the indispensable methods and models for quantitative analysis,
- models and classifies optimization problems and chooses the appropriate solution methods to solve optimization problems independently,
- validates, illustrates and interprets the obtained solutions.

Content

This module treats the following topics: linear programming, network models, integer programming, nonlinear programming, dynamic programming, queuing theory, heuristic models.

This module forms the basis of a series of advanced lectures with a focus on both theoretical and practical aspects of Operations Research.

Courses in module *Introduction to Operations Research* [TVWL1OR]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25040	Introduction to Operations Research I (S. 92)	2/2/2	S	4.5	S. Nickel, O. Stein, K. Waldmann
25043	Introduction to Operations Research II (S. 93)	2/2/2	W	4.5	S. Nickel, O. Stein, K. Waldmann

Module: Introduction to Civil Law**Module key: [TVWL1JURA1]****Subject:** Law**Module coordination:** Thomas Dreier**Credit points (CP):** 4**Learning Control / Examinations**

The assessment of this module consists of a written examination (90 min) according to § 4(2), 1 of the examination regulation. The grade of the module is the grade of the written examination.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student

Content

The module generally introduces into law. What is law, why are legal rules valid, and what is the role of law in conjunction with social behaviour, technological and market developments? What is the relationship between law and justice? Moreover, the distinction between civil law, public law and criminal law will be highlighted. The basics of jurisdiction, international conflicts and alternative dispute settlement will be discussed. The main focus of the course is on the fundamental notions of civil law as defined and regulated in the German Civil Code (Bürgerliches Gesetzbuch, BGB), such as subjects and objects of law, legally binding declarations, agency, the formation of contracts, standard terms and conditions, consumer protection, performance of contractual promises. The course ends with an outlook to the law of contracts and property law.

Courses in module *Introduction to Civil Law* [TVWL1JURA1]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
24012	Civil Law for Beginners (S. 94)	4/0	W	4	T. Dreier, P. Sester

Module: Constitutional and Administrative Law**Module key: [TVWL1JURA3]****Subject:** Law**Module coordination:** Indra Spiecker genannt Döhmann**Credit points (CP):** 6**Learning Control / Examinations**

The assessment of this module consists of a written examination (90 min) according to § 4(2), 1 of the examination regulation for the courses *Public Law I* and *II*.

The grade of the module is the grade for the written examination.

Prerequisites

None.

Conditions

The course *Public Law I* [24016] has to be attend before the course *Public Law II* [24520].

Learning Outcomes

The lecture covers the core principles of public law. Students shall become acquainted with the basics of constitutional law, the fundamental rights which route governmental actions and the entire legal system, as well as possibilities of actions and instruments (especially law, administrative act, public-private contract) of the public authority. Furthermore the distinction between public and private law will be clarified. Moreover, possibilities of legal protection regarding administrative behavior will be addressed. Students shall learn to classify problems in public law and to solve (simple) administrative and constitutional cases.

Content

The course covers core material of constitutional and administrative law. It begins with the differentiation between public and private law. In the constitutional law part, the course will concentrate on the rule of law and individual rights, especially those protecting communication and entrepreneurship. The administrative law part will explain the different legal instruments of the administration how to act (rule, order, contract, etc.) and their propositions. Also, court proceedings to sue the administrative will be discussed. Students will learn the technique how to solve (simple) administrative and constitutional cases

Courses in module *Constitutional and Administrative Law* [TVWL1JURA3]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
24016	Public Law I - Basic Principles (S. 95)	2/0	W	3	I. Spiecker genannt Döhmann
24520	Public Law II - Public Economic Law (S. 96)	2/0	S	3	I. Spiecker genannt Döhmann

Module: Mathematics**Module key: [TVWL1MATH]****Subject:** Mathematics**Module coordination:** Günter Last**Credit points (CP):** 21**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2), 1 and 3 of the examination regulation) of the single courses of this module.

The overall grade of the module is the average of the grades for each course truncated after the first decimal.

The assessment procedures of each course of this module is defined for each course separately.

Prerequisites

The admission to the examinations carried out regardless of the evidence of the other examinations in the module.

Conditions

It is strongly recommended to attend the courses in the following sequence: *Mathematics I* [01350], *Mathematics II* [01830] *Mathematics III* [01352]

Learning Outcomes**Content****Courses in module *Mathematics* [TVWL1MATH]**

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)

01352	Mathematics III (S. 99)	4/2/2	W	7	G. Last, Folkers, Klar

Module: Statistics

Module key: [TVWL1STAT]

Subject: Statistics

Module coordination: Svetlozar Rachev, Markus Höchstötter

Credit points (CP): 10

Learning Control / Examinations

The assessment of this module consists of two written examinations according to Section 4(2), 1 of the examination regulation (one for each of the courses Statistics I and II).

The overall grade of the module is the average of the grades of these two written examinations.

Prerequisites

To some extend knowledge of the content of the module Mathematics [WW1MATH/WI1MATH] is assumed. Therefore it is recommended to attend the course *Mathematics I* [01350] before attending the module *Statistics* [TVWL1STAT].

Conditions

It is recommended to attend the course *Statistics I* [25008/25009] before the course *Statistics II* [25020/25021].

Each course is complemented by an exercise, a tutorial and a computing laboratory. It is highly recommended to attend these too.

Notice: The lecture *Statistics I* [25008/25009] is part of the preliminary examination concerning Section 8(1) of the examination regulation. This examination must be passed until the end of the examination period of the second semester. Any Re-examinations has to be passed until the end of the examination period of the third semester. Otherwise the examination claim will be lost.

Learning Outcomes

Content

The module contains the fundamental methods and scopes of Statistics.

A. Descriptive Statistics: univariate und bivariate analysis

B. Probability Theory: probability space, conditional and product probabilities, transformation of probabilities, parameters of location and dispersion, most important discrete and continuous distributions, covariance and correlation, convolution and limit distributions

C. Theory of estimation and testing: sufficiency of statistics, point estimation (optimality, ML-method), interval estimations, theory of tests (optimality, most important examples of tests)

Courses in module *Statistics* [TVWL1STAT]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25008/25009	Statistics I (S. 100)	4/0/2	S	5	M. Höchstötter
25020/25021	Statistics II (S. 101)	4/0/2	W	5	M. Höchstötter

6 Modules (Specialization)

6.1 Economics

Module: Applied Game Theory

Module key: [TVWL3VWL1]

Subject: Economics

Module coordination: Siegfried Berninghaus

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. Every singled lecture is examined within a 80 min. written exam at the end of the of the recess period. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

In the lecture *Experimental Economics* [25373] there may be the possibility - depending on the lecturer - to improve the final mark of the passed exam by writing a term paper and presenting it in class.

Prerequisites

None.

Conditions

Good knowledge of mathematics and statistics is recommended.

One of the lectures *Game Theory I* [25525] or *Game Theory II* [25369] has to be completed. Overall there has to be absolved examinations at at least 9 Credits.

Learning Outcomes

The student

- analyzes economic interdependencies under use of experimental mehtods and evaluates theoretial concepts,
- applies theoretical algorithms to economic and managerial problems,
- is able to analyze complex strategic decision problems by means of game theoretical concepts,
- knows basic solutions concepts of simple strategic decisions and is able to apply them to concrete economic problems,
- understands economic and managerial decision problems and is able to solve them by applying suitable solution concepts,
- knows experimental methods in economics from experiment design to evaluation of data.

Content

Lectures discuss individual as well as group decisions under (un-)certainty. Tutorials apply theoretical concepts to case studies. Theoretical models are compared to empirical findings.

Courses in module *Applied Game Theory* [TVWL3VWL1]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25525	Game Theory I (S. 200)	2/2	S	4.5	S. Berninghaus
25369	Game Theory II (S. 190)	2/2	W	4.5	S. Berninghaus
25371	Industrial Organization (S. 191)	2/2	S	4.5	S. Berninghaus
25373	Experimental Economics (S. 192)	2/2	S	4,5	S. Berninghaus, Kroll

Module: Strategic Games

Module key: [TVWL3VWL4]

Subject: Economics

Module coordination: Siegfried Berninghaus

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. Every singled lecture is examined within a 80 min. written exam at the end of the of the recess period. Re-examinations are offerd at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None.

Conditions

It is recommended to attend the courses in the following sequence:

1. *Game Theory I* [25525]
2. *Game Theory II* [25369]

Learning Outcomes

The student

- structurizes complex strategic decision problems and applies efficient solution algorithms,
- has a broad overview over game and decision theory,
- applies tough methods to problems of political and managerial consulting,
- knows basic solution concepts of simple strategic decision situations and is able to apply them to concrete economic problems,
- knows and analyzes strategic decisions, knows advanced solution concepts and applies them,
- knows basic elements of decision theory under (un-)certainty as well as more advanced models and is able to analyze and solve these problems, understands decision behavior by cofronting it with experimental economics.

Content

The module consists of lectures in strategic decision making against other players or "nature". Building on normal and extensive form games different strategic and non-strategic decision situations are laid out. Then more complex situations (e.g., repeated bargaining, reputation building) are discussed.

Courses in module *Strategic Games* [TVWL3VWL4]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25525	Game Theory I (S. 200)	2/2	S	4.5	S. Berninghaus

25365	Economics of Uncertainty (S. 189)	2/2	S	4.5	K. Ehrhart

Module: International Economics**Module key: [TVWL3VWL3]****Subject:** Economics**Module coordination:** Jan Kowalski**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The exams are offered at the beginning of the recess period about the subject matter of the latest held lecture. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module separately.

The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Note the changes in course offering under “remarks”.

Prerequisites

Successful completion of the module *Economics* [WW1VWL].

Conditions

None.

Learning Outcomes

The students

- obtain comprehensive knowledge on open global economy
- become experts in dealing with the complex world-wide market, and are able to react to the challenges of the global economy

Content

Problems of the internationalisation of economic activities, European institutions and programs, as well as questions of the less developed countries and development policy.

Courses in module *International Economics* [TVWL3VWL3]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
26254	International Economic Policy (S. 234)	2/0	S	4	J. Kowalski

26252	International Economics (S. 233)	2/1	W	5	J. Kowalski

Module: Microeconomic Theory**Module key: [TVWL3VWL6]****Subject:** Economics**Module coordination:** Clemens Puppe**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

To improve the overall grade of the module, there might be taken optional term paper in the field of economics (ie, on the chairs Puppel, or at Berninghaus resp. at the IWW) within the module (according to Section 4(2), 3 of the examination regulation). The submission of the term paper is only admitted until the end of the following semester in which the last exam of the Economics-Module was absolved. It does not apply for term papers which are already taken in the Seminar Module. For more information, please visit the homepage of the Chair (<http://vwl1.ets.kit.edu/>).

The overall grade for the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module *Economics* [WW1VWL].

Conditions

None.

Learning Outcomes**Content**

As a branch of Economics, Public Finance is concerned with the theory and policy of the public sector and its interrelations with the private sector. It analyzes the economic role of the state from a normative as well as from a positive point of view. The normative view examines efficiency- and equity-oriented motives for government intervention and develops fiscal policy guidelines. The positive view explains the actual behavior of economic agents in public sector affairs. Special fields of Public Finance are public revenues, i.e. taxes and public debt, public expenditures for publicly provided goods, and welfare programs.

6.2 Business Administration

Module: Sustainable Construction

Module key: [TVWL3BWLOOW1]

Subject: Business Administration

Module coordination: Thomas Lützkendorf

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial exams (according to Section 4(2), 1 o. 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The final grade of the module is the average of the grades of each course weighted by the credits and truncated after the first decimal.

It is possible to include the grade of a seminar paper, dealing with a topic from the area of sustainable construction, into the final grade of the module (according to Section 4(2), 3 of the examination regulation). The seminar has a weight of 20 percent.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

The combination with the module *Real Estate Management* [TVWL3BWLOOW2] is recommended.

Furthermore a combination with courses in the area of

- Industrial production (energy flow in the economy, energy politics, emissions)
- Civil engineering and architecture (building physics, building construction)

is recommended.

Learning Outcomes

The student

- knows the basics of sustainable design, construction and operation of buildings with an emphasis on building ecology
- has knowledge of building ecology assessment procedures and tools for design and assessment
- is capable of applying this knowledge to assessing the ecological advantageousness of buildings as well as their contribution to a sustainable development.

Content

Sustainable design, construction and operation of buildings currently are predominant topics of the real estate sector, as well as "green buildings". Not only designers and civil engineers, but also other actors who are concerned with project development, financing and insurance of buildings or portfolio management are interested in these topics.

On the one hand the courses included in this module cover the basics of energy-efficient, resource-saving and health-supporting design and construction of buildings. On the other hand fundamental assessment procedures for analysing and communicating the ecological advantageousness of technical solutions are discussed. With the basics of green building certification systems the lectures provide presently strongly demanded knowledge.

Additionally, videos and simulation tools are used for providing a better understanding of the content of teaching.

Courses in module *Sustainable Construction* [TVWL3BWLOOW1]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
26404w	Design, Construction and Assessment of Green Buildings I (S. 281)	2/1	W	4,5	T. Lützkendorf
26404	Sustainability Assessment of Construction Works (S. 245)	2/1	S	4,5	T. Lützkendorf

Module: Real Estate Management**Module key: [TVWL3BWLOOW2]****Subject:** Business Administration**Module coordination:** Thomas Lützkendorf**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2), 1 o. 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades of each course weighted by the credits and truncated after the first decimal.

It is possible to include the grade of a seminar paper, dealing with a topic from the area of sustainable construction, into the final grade of the module (according to Section 4(2), 3 of the examination regulation). The seminar has a weight of 20 percent.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

The combination with the module *Design Constructions and Assessment of Green Buildings* [TVWL3BWLOOW1] is recommended.

Furthermore a combination with courses in the area of

- Finance
- Insurance
- Civil engineering and architecture (building physics, building construction, facility management)

is recommended.

Learning Outcomes

The student

- possesses an overview concerning the different facets and interrelationships within the real estate business, the important decision points in real estate lifecycle and the different views and interests of the actors concerned, and
- is capable of applying basic economic methods and procedures to problems within the real estate area.

Content

The real estate business offers graduates very interesting jobs and excellent work- and advancement possibilities. This module provides an insight into the macroeconomic importance of this industry, discusses problems concerned to the administration of real estate and housing companies and provides basic knowledge for making decisions both along the lifecycle of a single building and the management of real estate portfolios. Innovative operating and financing models are illustrated, as well as the current development when looking at real estate as an asset-class.

This module is also suitable for students who want to discuss macroeconomic, business-management or financial problems in a real estate context.

Courses in module *Real Estate Management* [TVWL3BWLOOW2]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
26400w	Real Estate Management I (S. 280)	2/2	W	4,5	T. Lützkendorf
26400	Real Estate Management II (S. 244)	2/2	S	4,5	T. Lützkendorf

Module: eBusiness and Servicemanagement

Module key: [TVWL3BWLISM1]

Subject: Business Administration

Module coordination: Christof Weinhardt

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial exams (according to Section 4(2), 1 and 3 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

Keine.

Learning Outcomes

The students

- understand the strategic and operative design of information and information products,
- analyze the role of information on markets,
- evaluate case studies regarding information products,
- develop solutions in teams.

Content

This module gives an overview of the mutual dependencies of strategic management and information systems. The central role of information is exemplified by the structuring concept of the *information life cycle*. The single phases of this life cycle from generation over allocation until dissemination and use of the information are analyzed from a business and microeconomic perspective, applying classical and new theories. The state of the art of economic theory on aspects of the information life cycle are presented. The lecture is complemented by exercise courses.

The courses "Management of Business Networks", "eFinance: Information engineering and management in finance" and "eServices" constitute three different application domains in which the basic principles of the Internet Economy are deepened. In the course "Management of Business Networks" the focus is set on the strategic aspects of management and information systems. It is held in English and teaches parts of the syllabus with the support of a case study elaborated with Prof Kersten from Concordia University, Montreal, Canada. If it is possible to organize, depending on the start of term in Canada, the case study will be worked on by the students via internet in collaboration with Canadian students. The results will jointly be presented in a telephone conference.

The course "eFinance: information engineering and management for securities trading" provides theoretically profound and also practical-oriented background about the functioning of international financial markets. The focus is placed on the economic and technical design of markets as information processing systems.

In "eServices" the increasing impact of electronic services compared to the traditional services is outlined. The Information- und Communication Technologies enable the provision of services, which are mainly characterized by interactivity and individuality. This course provides basic knowledge about the development and management of ICT-based services.

The theoretic fundamentals of Information Engineering and Management can be enriched by a practical experience in Special Topics in Information Engineering and Management. Any practical Seminar at the IM can be chosen for the course Special Topics in Information Engineering and Management.

Courses in module eBusiness and Servicemanagement [TVWL3BWLISM1]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
26466	eServices (S. 249)	2/1	S	5	C. Weinhardt, G. Satzger
26452	Management of Business Networks (S. 247)	2/1	W	4.5	C. Weinhardt, J. Kraemer

Module: Supply Chain Management**Module key: [TVWL3BWLISM2]****Subject:** Business Administration**Module coordination:** Christof Weinhardt**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2), 1 and 3 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

It is recommended that exactly one out of the lectures

- *Management of Business Networks*
- *Management of Business Networks (Introduction)*

is taken.

Learning Outcomes

The module "Supply Chain Management" imparts knowledge for strategic and operative designing and control of supply chains spanning several enterprises. The students shall be able to analyze the coordination problems within supply chains, to judge them and to support them providing appropriate information systems. In order to be able to do this it is necessary to understand the coordination and planning mechanisms from the field of Operations Research and, on the other hand, to be familiar with methods from information management. Thus, the module gives an overview of methods and instruments of Supply Chain Management for the strategical, organizational and technical design of integrated supply chains.

Content

The module "Supply Chain Management" gives an overview of the mutual dependencies of information systems and of supply chains spanning several enterprises. The specifics of supply chains and their information needs set new requirements for the operational information management. In the core lecture "Management of Business Networks" the focus is set on the strategic aspects of management and information systems. The course is held in English and teaches parts of the syllabus with the support of a case study elaborated with Prof Kersten from Concordia University, Montreal, Canada. The course MBN introduction is consisting out of the first part of the regular MBN lecture, but as it has less credits will not include the analysis of the case study. The module is completed by an elective course addressing appropriate optimization methods for the Supply Chain Management and for modern logistic approaches.

Remarks

The current seminar courses for this semester, which are complementary to this module, are listed on following webpage: the <http://www.im.uni-karlsruhe.de/lehre>

The course *Management of Business Networks (Introduction)* was added to the module.

The course *Quantitative Methods for Supply Chain Risk Management* was added to the module.

The course *Tactical and Operational Supply Chain Management* [25488] was added to the module.

The course *Logistics - Organisation, Design, and Control of Logistic Systems* was formerly named *Logistics*.

Module: eFinance**Module key: [TVWL3BWLISM3]****Subject:** Business Administration**Module coordination:** Christof Weinhardt**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2), 1 and 3 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

The course *eFinance: Information Engineering and Management for Securities Trading* [26454] has to be attended.

Learning Outcomes

In the module "eFinance: Information engineering and management in finance" the students get an overview of modern approaches of information management in the finance sector. They learn to analyze specific financial problems from the point of view of information management and also to solve these problems by using the tools provided by information management. By doing so, they get to know finance products as information products and learn the state of the art of modern information processing in the finance sector.

Content

The module "eFinance: Information engineering and management in finance" addresses current problems in the finance sector. It is investigated the role of information and knowledge in the finance sector and how information systems can solve or extenuate them. Speakers from practice will contribute to lectures with their broad knowledge. Core courses of the module deal with the background of banks and insurance companies and the electronic commerce of stocks in global finance markets. In addition the course Derivatives offers an insight into future and forward contracts as well as the assesment of options. Exchanges and International Finance are also alternatives which provide a supplementary understanding for capital markets.

Information management topics are in the focus of the lecture "eFinance: information engineering and management for securities trading". For the functioning of the international finance markets, it is necessary that there is an efficient information flow. Also, the regulatory frameworks play an important role. In this context, the role and the functioning of (electronic) stock markets, online brokers and other finance intermediaries and their platforms are presented. Not only IT concepts of German finance intermediaries are presented, but also international system approaches will be compared. The lecture is supplemented by speakers from the practice (and excursions, if possible) coming from the Deutsche Börse and the Stuttgart Stock Exchange.

Remarks

The current seminar courses for this semester, which are complementary to this module, are listed on following webpage: the <http://www.im.uni-karlsruhe.de/lehre>

Module: CRM and Service Management**Module key: [TVWL3BWLISM4]****Subject:** Business Administration**Module coordination:** Andreas Geyer-Schulz**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. Thereby every lecture is examined by a written exam (according to Section 4(2), 1 of the examination regulation) and by successful completion of exercises (according to Section 4 (2), 3 of the examination regulation).

The grades of the individual lectures consists of the grade of the written exam (approximately 90 percent resp. 100 of 112 points) and of the exercise performance (approximately 10 percent resp. 12 of 112 points). In the case of passing the written exam (50 points) the points of the exercise performance will be added to the points of the written exam. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

None.

Learning Outcomes

The student

- understands service management as the managerial foundation of customer relationship management and the resulting implications for strategic management, the organisational structure, and the functional areas of the company,
- develops and designs service concepts and service systems on a conceptual level,
- works in teams on case studies and respects project dates, integrates international literature of the discipline,
- knows the current developments in CRM in science as well as in industry,
- knows the scientific methods (from business administration, statistics, informatics) which are most relevant for analytic CRM and he autonomously applies these methods to standard cases,
- designs, implements, and analyzes operative CRM processes in concrete application domains (e.g. campaign management, call center management, ...).

Content

In the module *CRM and Service Management* [TVWL3BWLISM4] we teach the principles of modern customer-oriented management and its support by system architectures and CRM software packages. Choosing customer relationship management as a company's strategy requires service management and a strict implementation of service management in all parts of the company. For operative CRM we present the design of customer-oriented, IT-supported business processes based on business process modelling and we explain these processes in concrete application scenarios (e.g. marketing campaign management, call center management, sales force management, field services, ...).

Analytic CRM is dedicated to improve the use of knowledge about customers in the broadest sense for decision-making (e.g. product-mix decisions, bonus programs based on customer loyalty, ...) and for the improvement of services. A requirement for this is the tight integration of operative systems with a data warehouse, the development of customer-oriented and flexible reporting systems, and – last but not least – the application of statistical methods (clustering, regression, stochastic models, ...).

Courses in module CRM and Service Management [TVWL3BWLISM4]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
26508	Customer Relationship Management (S. 253)	2/1	W	4,5	A. Geyer-Schulz

26520	Operative CRM (S. 254)	2/1	W	4,5	A. Geyer-Schulz

Remarks

The lecture *Customer Relationship Management* [26508] is given in English.

Module: Specialization in Customer Relationship Management [TVWL3BWLISM5]

Module key:

Subject: Business Administration

Module coordination: Andreas Geyer-Schulz

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial exams (according to Section 4(2), 1 and 3 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

This module has to be taken together with the module *Customer Relationship Management and Servicemanagement* [WW3BWLCRM1].

Or the course *Analytic CRM* [26522] or the course *Operative CRM* [26520] has to be taken.

Learning Outcomes

The student

- knows the scientific methods (from business administration, statistics, informatics) which are most relevant for analytic CRM and he autonomously applies these methods to standard cases,
- gains an overview of the market for CRM software,
- designs, implements, and analyzes operative CRM processes in concrete application domains (e.g. campaign management, call center management, ...),
- is aware of the problems of protecting the privacy of customers and the implications of privacy law.

Content

In this module, analysis methods and techniques for the management and improvement of customer relations are presented. Furthermore, modelling, implementation, introduction, change, analysis and valuation of operative CRM processes are treated.

Regarding the first part, we teach analysis methods and techniques suitable for the management and improvement of customer relations. For this goal we treat the principles of customer- and service-oriented management as the foundation of successful customer relationship management. In addition, we show how knowledge of the customer can be used for decision-making at an aggregate level (e.g. planning of assortments, analysis of customer loyalty, ...). A basic requirement for this is the integration and collection of data from operative processes in a suitably defined data-warehouse in which all relevant data is kept for future analysis. The process of transferring data from the operative systems into the data warehouse is known as the ETL process (Extraction / Translation / Loading). The process of modelling a data-warehouse as well as the so-called extraction, translation, and loading process for building and maintaining a data-warehouse are discussed in-depth. The data-warehouse serves as a base for flexible management reporting. In addition, various statistic methods (e.g. cluster analysis, regression analysis, stochastic models, ...) are presented which help in computing suitable key performance indicators or which support decision-making.

Regarding the operative part, we emphasize the design of operative CRM processes. This includes the modelling, implementation, introduction and change, as well as the analysis and evaluation of operative CRM processes. Petri nets and their extensions are the scientific foundation of process modelling. The link of Petri nets to process models used in industry as e.g. UML activity diagrams is presented. In addition, a framework for process innovation which aims at a radical improvement of key business processes is introduced. The following application areas of operative CRM processes are presented and discussed:

- Strategic marketing processes
- Operative marketing processes (campaign management, permission marketing, ...)
- Customer service processes (sales force management, field services, call center management, ...)

Courses in module *Specialization in Customer Relationship Management* [TVWL3BWLISM5]

Module: Essentials of Finance**Module key: [TVWL3BWLFBV1]****Subject:** Business Administration**Module coordination:** Marliese Uhrig-Homburg, Martin E. Ruckes**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The examinations are offered every semester. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

None.

Learning Outcomes

The student

- has fundamental skills in modern finance
- has fundamental skills to support investment decisions on stock, bond and derivative markets
- applies concrete models to assess investment decisions on financial markets as well as corporate investment and financing decisions.

Content

The module *Essentials of Finance* deals with fundamental issues in modern finance. The courses discuss fundamentals of the valuation of stocks. A further focus of this module is on modern portfolio theory and analytical methods of capital budgeting and corporate finance.

Courses in module *Essentials of Finance* [TVWL3BWLFBV1]

Learning Outcomes

The student

- has advanced skills in modern finance
- is able to apply these skills in practice in the fields of finance and accounting, financial markets and banking

Content

The module *Topics in Finance I* is based on the module *Essentials of Finance*. The courses deal with advanced issues concerning the fields of finance and accounting, financial markets and banking from a theoretical and practical point of view.

Courses in module *Topics in Finance I* [TVWL3BWLFBV5]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25210	Management Accounting (S. 181)	2/1	S	4.5	T. Lüdecke
25232	Financial Intermediation (S. 183)	3	W	4.5	M. Ruckes
26550	Derivatives (S. 258)	2/1	S	4.5	M. Uhrig-Homburg
25296	Exchanges (S. 185)	1	S	1.5	J. Franke

26454	eFinance: Information Engineering and Management for Securities Trading (S. 248)	2/1	W	4.5	C. Weinhardt, R. Riordan

Module: Topics in Finance II**Module key: [TVWL3BWLFBV6]****Subject:** Business Administration**Module coordination:** Marliese Uhrig-Homburg, Martin E. Ruckes**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The examinations are offered every semester. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

It is only possible to choose this module in combination with the module *Essentials in Finance* [TVWL3BWLFBV1].

In addition to that it is possible to choose the module *Topics in Finance I* [TVWL3BWLFBV5]. In this case only those courses are electable, that have not been chosen in the module *Topics in Finance I* [TVWL3BWLFBV5] yet.

Learning Outcomes

The student

- has advanced skills in modern finance
- is able to apply these skills in practice in the fields of finance and accounting, financial markets and banking

Module: Foundations of Marketing**Module key: [TVWL3BWLMAR]****Subject:** Business Administration**Module coordination:** Wolfgang Gaul, Bruno Neibecker**Credit points (CP):** 9**Learning Control / Examinations**

The assessment consists of a general written exam according to §4 Abs. 2, Nr. 1 of examination regulation. The written exam has a duration of 120 min. and contains topics from the main lecture [25150] as well as from the chosen lectures [25154], [25156], [25177]. The examination is offered every semester. Re-examinations are offered at every ordinary examination date and has to be absolved within one year.

The overall grade for the module is the average of the grades for each course weighted by the credits of the course.

It is recommended, to attend more lectures than required to fulfill 9 CP as it is possible to examine in these additional lectures and influence the final grade positively.

Prerequisites

Successful completion of the module *Business Administration* [TVWL1BWL].

Conditions

The course *Marketing and Consumer Behavior* [25150] has to be attended.

Remarks

Module: Industrial Production I**Module key: [TVWL3BWLIIIP]****Subject:** Business Administration**Module coordination:** Frank Schultmann**Credit points (CP):** 9**Learning Control / Examinations**

The module contains of “Fundamentals of Production Management” [25950] and one optional course. The examination will be in form of individual written exams acc. to §4(2), 1 ER. Exams are offered in every semester and can be re-examined at every ordinary examination date.

The overall modular grade is calculated by weighing the individual grades with the according credit points. The grade will be truncated after the first decimal. Additional results may be considered on request. Assessment procedures are described separately for each course of the module.

Prerequisites

Specific precondition for “Business Engineering” (B.Sc.) and “Economics Engineering” (B.Sc.): Successful passing of the module “Business Administration” [TVWL1BWL].

Conditions

The course “Fundamentals of Production Management” [25950] and one additional activity have to be chosen. All courses are specifically designed to be taken independently.

Bearing in mind the master programme, we recommend combining this module with “Industrial Production II” [WW4BWLIIIP2] and/or “Industrial Production III” [WW4BWLIIIP6].

Learning Outcomes

- Students shall be aware of the important role of industrial production and logistics for production management.
- Students shall use relevant concepts of production management and logistics in an adequate manner.
- Students shall be able to reflect on decision principles in firms and their circumstances in the light of the production management aspects studied.
- Students shall be proficient in describing essential tasks, difficulties and solutions to problems in production management and logistics
- Students shall be able to describe relevant approaches of modeling production and logistic systems.
- Students shall be aware of the important role of material and energy-flows for an economy.
- Students shall be proficient in using exemplary methods for solving selected problems.

Content

This module is designed to introduce students into the wide area of industrial production and logistics management. It focuses on strategic production management under the aspect of sustainability. The courses use interdisciplinary approaches of systems theory to describe the central tasks of industrial production management and logistics. Herein, attention is drawn upon strategic corporate planning, research and development as well as site selection. Students will obtain knowledge in solving internal and external transport and storage problems with respect to supply chain management and disposal logistics.

6.3 Informatics

Module: Emphasis Informatics

Module key: [TVWL3INFO1]

Subject: Informatics

Module coordination: Hartmut Schmeck, Andreas Oberweis, Detlef Seese, Wolffried Stucky, Rudi Studer, Stefan Tai

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as two partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module. For passing the module exam in every singled partial exam the respective minimum requirements has to be achieved.

- Partial exam I: *Advanced Programming - Java Network Programming* [25889] or alternatively *Advanced Programming - Application of Business Software* [25886]
- Partial exam II: all the rest

The examinations are offered every semester. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module seperately.

When every singled examination is passed, the overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None.

Conditions

Either the course *Advanced Programming - Java Network Programming* [25889] or the course *Advanced Programming - Application of Business Software* [25886] has to be attended.

Learning Outcomes

The student

- has the capability of dealing with the practical application of the Java programming language (which is the dominating programming language in many application areas) or alternatively the ability to configure, parametrize and deploy enterprise software to enable, support and automate business processes,
- is familiar with methods and systems of a core topic or core application area of computer science,
- can choose these methods and system situation adequately and can furthermore design and employ them for problem solving,
- is able to independently find strategic and creative answers in the finding of solutions to well defined, concrete, and abstract problems.

6.4 Operations Research

Module: Applications of Operations Research

Module key: [TVWL3OR5]

Subject: Operations Research

Module coordination: Stefan Nickel

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial exams (according to § 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module.

The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None.

Conditions

At least one of the courses *Facility Location and strategic Supply Chain Management* [25486] and *Tactical and operational Supply Chain Management* [25488] has to be taken.

Learning Outcomes

The student

- is familiar with basic concepts and terms of Supply Chain Management,
- knows the different areas of Supply Chain Management and their respective optimization problems,
- is acquainted with classical location problem models (in the plane, on networks and discrete) as well as fundamental methods for distribution and transport planning, inventory planning and management,
- is able to model practical problems mathematically and estimate their complexity as well as choose and adapt appropriate solution methods.

Content

Supply Chain Management is concerned with the planning and optimization of the entire, inter-company procurement, production and distribution process for several products taking place between different business partners (suppliers, logistics service providers, dealers). The main goal is to minimize the overall costs while taking into account several constraints including the satisfaction of customer demands.

This module considers several areas of Supply Chain Management. On the one hand, the determination of optimal locations within a supply chain is addressed. Strategic decisions concerning the location of facilities like production plants, distribution centers or warehouses are of high importance for the rentability of supply chains. Thoroughly carried out, location planning tasks allow an efficient flow of materials and lead to lower costs and increased customer service. On the other hand, the planning of material transport in the context of Supply Chain Management represents another focus of this module. By linking transport connections and different facilities, the material source (production plant) is connected with the material sink (customer). For given material flows or shipments, it is considered how to choose the optimal (in terms of minimal costs) distribution and transportation chain from the set of possible logistics chains, which asserts the compliance of delivery times and further constraints.

Furthermore, this module offers the possibility to learn about different aspects of the tactical and operational planning level in Supply Chain Management, including methods of scheduling as well as different approaches in procurement and distribution logistics. Finally, issues of warehousing and inventory management will be discussed.

Courses in module *Applications of Operations Research* [TVWL3OR5]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25486	Facility Location and Strategic Supply Chain Management (S. 195)	2/1	S	4.5	S. Nickel

25134	Global Optimization I (S. 173)	2/1	W	4.5	O. Stein
25662	Simulation I (S. 204)	2/1/2	W	4.5	K. Waldmann

Remarks

The planned lectures and courses for the next three years are announced online (<http://www.ior.kit.edu/>).

Module: Methodical Foundations of OR**Module key: [TVWL3OR6]****Subject:** Operations Research**Module coordination:** Oliver Stein**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None.

Conditions

At least one of the lectures *Nonlinear Optimization I* [25111] and *Global Optimization I* [25134] has to be examined.

Learning Outcomes

The student

- names and describes basic notions for optimization methods, in particular from nonlinear and from global optimization,
- knows the indispensable methods and models for quantitative analysis,
- models and classifies optimization problems and chooses the appropriate solution methods to solve also challenging optimization problems independently and, if necessary, with the aid of a computer,
- validates, illustrates and interprets the obtained solutions.

Content

The modul focuses on theoretical foundations as well as solution algorithms for optimization problems with continuous decision variables. The lectures on nonlinear programming deal with local solution concepts, whereas the lectures on global optimization treat possibilities for global solutions.

Courses in module *Methodical Foundations of OR* [TVWL3OR6]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
25111	Nonlinear Optimization I (S. 170)	2/1	S	4.5	O. Stein

25136	Global Optimization II (S. 174)	2/1	W	4.5	O. Stein
25486	Facility Location and Strategic Supply Chain Management (S. 195)	2/1	S	4.5	S. Nickel
25679	Markov Decision Models I (S. 206)	2/1/2	W	5	K. Waldmann

Remarks

The planned lectures and courses for the next three years are announced online (<http://www.ior.kit.edu>)

Module: Stochastic Methods and Simulation**Module key: [TVWL3OR7]****Subject:** Operations Research**Module coordination:** Karl-Heinz Waldmann**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial written exams (according to Section 4(2), 1 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student knows and understands stochastic relationships and has a competent knowledge in modelling, analyzing and optimizing stochastic systems in economics and engineering.

Content

Topics overview:

Stochastic Decision Models I: Markov Chains, Poisson Processes.

Simulation I: Generation of random numbers, Monte Carlo integration, Discrete event simulation, Discrete and continuous random variables, Statistical analysis of simulated data.

Simulation II: Variance reduction techniques, Simulation of stochastic processes, Case studies.

Courses in module *Stochastic Methods and Simulation* [TVWL3OR7]

25488	Tactical and Operational Supply Chain Management (S. 196)	2/1	W	4.5	S. Nickel

Remarks

The planned lectures and courses for the next three years are announced online (<http://www.ior.kit.edu/>)

6.5 Statistics

Module: Statistical Applications of Financial Risk Management Module key: [TVWL3STAT]

Subject: Statistics

Module coordination: Svetlozar Rachev

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial exams of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the module Statistics [TVWL1STAT]. The lecture *Economics III: Introduction in Econometrics* may not be taken as it is part of the core programme.

Conditions

The lecture *Statistics and Econometrics in Business and Economics* has to be taken.

The lecture *Economics III: Introduction in Econometrics* [25016] may not be taken as it is part of the core programme.

Learning Outcomes

Content

6.6 Natural and Engineering Sciences

Module: Introduction to Technical Logistics

Module key: [TVWL3INGMB13]

Subject: Natural Science/ Engineering Science

Module coordination: Kai Furmans

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

To improve the overall grade of the module up to one grading scale (0.3) there might be taken an optional term paper in the field of the IFL. The term paper may not be convalidated in the seminar module.

Prerequisites

None.

Conditions

One of the core courses *Material Flow in Logistic Systems* [21051] and *Technical Logistics I* [2117501] is obligatory.

Learning Outcomes

The student acquires

- well-founded knowledge and method knowledge in the main topics of technical logistics,
- expertise and understanding about the functionality of conveyor technology,
- ability for modeling logistic systems with adequate accuracy by using simple models,
- ability to evaluate logistic systems and to identify cause-and-effects-chains within logistic systems.

Content

The module *Introduction to Technical Logistics* provides first insights into main topics of logistics. Within the lectures, the interaction between several components of material handling systems will be clarified. The focus will be on technical characteristics of material handling technology and basics for sizing of material handling systems. To gain a deeper understanding, the course is accompanied by exercises and further improved by case studies.

Courses in module *Introduction to Technical Logistics* [TVWL3INGMB13]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
21051	Material Flow in Logistic Systems (S. 125)	3/1	W	6	K. Furmans
2117501	Technical Logistics I (S. 262)	2/1	W	5	M. Mittwollen
2118097	Warehouse and Distribution Systems (S. 269)	2	S	4	K. Furmans
21056	Airport Logistics (S. 126)	2	W	4	Richter
2118085	Automotive Logistics (S. 265)	2	S	4	K. Furmans
2118089	Industrial Application of Material Handling Systems in Sorting and Distribution Systems (S. 266)	2	S	4	Föller
21692	International Production and Logistics (S. 141)	2	S	3	Lanza
2118094	Information Systems and Supply Chain Management (S. 268)	2	S	4	Kilger
2117500	Energy efficient intralogistic systems (S. 261)	2	W	4	Schönung

Remarks

The course *Technical Logistics I* was formerly known as *Fundamentals of Technical Logistics* and will be held in the winter term and will have 5 credit points.

The course *Material Flow in Logistic Systems* was formerly known as *Materialflow*.

The course *International Production and Logistics* will not be offered any more. Final examinations take place in september 2010.

All courses with two lecture hours per week have 4 CP.

Module: Production Engineering I

Module key: [TVWL3INGMB10]

Subject: Natural Science/ Engineering Science

Module coordination: Volker Schulze

Credit points (CP): 9

Learning Control / Examinations

Module exams take the form of written examinations (as per §4(2), 1 SPO [study and examination regulations]) about the different lectures and seminars of the module. Exams can be taken each semester during the lecture-free period and can be retaken at every official examination date. Performance assessments will be completed for every lecture and seminar of the module. The overall grade will be created from the grades of the partial examinations weighted with the respective CPs. Optionally, the module grade can be improved by writing a seminar paper (as per §4(2), 3 SPO [study and examination regulations]) at wbk Institute of Production Science

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student

- knows and understands the content covered by the selected lectures and seminars of the module *Production Engineering I* (manufacturing engineering, organisation and planning, machine tools and robots),
- is able to use that knowledge in a targeted way for an efficient production engineering in the selected area.

Content

This module from the field of engineering science covers the basic aspects of production engineering, including one of the three subject areas manufacturing engineering, machine tool and handling technology and organisation and planning. For the module *Production Engineering I*, one subject area is required.

Courses in module *Production Engineering I* [TVWL3INGMB10]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)

2149901	Machine Tools and Industrial Handling II (S. 272)	2/1	W	4,5	Munzinger

Module: Production Engineering II**Module key: [TVWL3INGMB4]****Subject:** Natural Science/ Engineering Science**Module coordination:** Volker Schulze**Credit points (CP):** 18**Learning Control / Examinations**

Module exams take the form of written examinations (as per §4(2), 1 SPO [study and examination regulations]) about the different lectures and seminars of the module. Exams can be taken each semester during the lecture-free period and can be retaken at every official examination date. Performance assessments will be completed for every lecture and seminar of the module. The overall grade will be created from the grades of the partial examinations weighted with the respective CPs. Optionally, the module grade can be improved by writing a seminar paper (as per §4(2), 3 SPO [study and examination regulations]) at wbk Institute of Production Science.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student

- knows and understands the content covered by the selected lectures and seminars of the module *Production Engineering II* (manufacturing engineering, organisation and planning, machine tools and robots),
- is able to use that knowledge in a targeted way for an efficient production engineering in the selected areas.

Content

This module from the field of engineering science covers the basic aspects of production engineering, including two of the three subject areas manufacturing engineering, machine tool and handling technology and organisation and planning. For the *Production Engineering II* module two subject areas are required.

Courses in module *Production Engineering II* [TVWL3INGMB4]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
21657	Manufacturing Engineering (S. 139)	4/1	W	9	V. Schulze
21660	Integrated Production Planning (S. 140)	4/1	S	9	Lanza
2149900	Machine Tools and Industrial Handling I (S. 271)	2/1	W	4,5	Munzinger
2149901	Machine Tools and Industrial Handling II (S. 272)	2/1	W	4,5	Munzinger

Module: Combustion Engines

Module key: [TVWL3INGMB16]

Subject: Natural Science/ Engineering Science

Module coordination: Heiko Kubach

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the weighted average of the grades for each course and truncated after the first decimal.

The weighting factors are:

- *Combustion Engines A* [21101]: 6
- *Combustion Engines B* [21135]: 4
- all the rest: 3

Prerequisites

Knowledge in the area of thermodynamics is helpful.

Conditions

The course *Combustion Engines A* [21101] is obligatory.

Remarks

The course *Efficient Creativity - Processes and Methods within the Automotive Industry* was added to the module.

Module: Electrical Power Engineering**Module key: [TVWL3INGETIT1]****Subject:** Natural Science/ Engineering Science**Module coordination:** Bernd Hoferer, Thomas Leibfried**Credit points (CP):** 18**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2), 1 or 2 of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The examinations take place at the beginning of the recess period. Re-examinations are offered at every ordinary examination date. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the weighted average of the grades for each course and truncated after the first decimal.

Prerequisites

None.

Conditions

The courses *Systems for Electrical Energy* [23391/23393] and *Power Network Analysis* [23371/23373] are obligatory.

Learning Outcomes

The student

- has basic and some advanced knowledge of electrical power engineering,
- is capable to analyse and develop electrical power engineering systems.

Content

The module deals with basic knowledge about the structure and operation of electrical power networks and their needed facilities. Further lectures give an insight into specific topics, such as Automation in electric power engineering or the procedures for generating electrical energy.

Courses in module *Electrical Power Engineering* [TVWL3INGETIT1]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
23391/23393	Systems for Electrical Energy (S. 274)	2/1	S	4,5	T. Leibfried

23382	Technique of Electrical Installation (S. 145)	2	S	3	Kühner
23396	Automation of Power Grids (S. 147)	2	S	3	Eichler

Remarks

The course *Power Network Analysis* was formerly known as *Electric Power System Engineering I*.

Module: Fundamentals of Spatial and Infrastructural Development [TVWL3INGBGU1]

Module key:

Subject: Natural Science/ Engineering Science

Module coordination: Ralf Roos

Credit points (CP): 9

Learning Control / Examinations

The assessment of the module is carried out as a general written examination (120 minutes) according to §4(2), 1 of the examination regulation.

The exam is offered in each semester as well as the re-examination. In case of failing or to improve the examination grade an additional oral examination (according to §4(2), 2 of the examination regulation) is offered in the same examination periode.

The overall grade of the module corresponds to the grade of the written examination or the average of the marks for the written and the oral assessment.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Learning the fundamental terminology and methodology of spatial and transportation planning, traffic engineering as well as highway engineering

Content

Basic tasks and contents of different planning levels, for example: Land use and conflicts, provision of services and infrastructure as well as their costs, planning on local, regional, national and European level.

Fundamentals of transportation planning (convention for analyses, surveys of travel behaviour), fundamentals of traffic engineering

Design Basics in Highway Engineering: Road network layout, driving dynamics, principles of highway design; earthworks, pavements and their dimensioning

Courses in module *Fundamentals of Spatial and Infrastructural Development* [TVWL3INGBGU1]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
19027	Basics in Transport Planning and Traffic Engineering (S. 112)	1/1	S	3	D. Zumkeller, Chlond
19026	Design Basics in Highway Engineering (S. 111)	1/1	S	3	R. Roos
19028	Spatial Planning and Planning Law (S. 113)	1/1	S	3	Engelke, Heberling

Module: Foundations of Guided Systems**Module key: [TVWL3INGBGU2]****Subject:** Natural Science/ Engineering Science**Module coordination:** Michael Weigel**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as a general written module exam according to Section 4 Abs. 2, Nr. 1 of the examination regulation. The module exam has a duration of 90 min.

The exam is offered each semester. The re-examination is offered upon prior agreement with the interested participants and not later than the next regular examination date.

The overall grade of the module is the grade for the exam.

Prerequisites

None.

Conditions

6.7 Law

Module: Commercial Law

Module key: [TVWL3JURA2]

Subject: Law

Module coordination: Peter Sester

Credit points (CP): 9

Learning Control / Examinations

The assessment of this module consists of a written examination according to § 4(2), 1 of the examination regulation for the courses Civil Law for Beginners, Advanced Civil Law, and Commercial and Corporation Law.

The grade of the module is the grade for the written examination.

Prerequisites

Successful completion of the modules *Introduction to Civil Law* [TVWL1JURA1] and *Constitutional and Administrative Law* [TVWL1JURA2]

Conditions

None.

Learning Outcomes

The student

- possesses in-depth knowledge of the general and specific law of obligations and of property law;
- is able to penetrate the interaction of the statutory provisions of the German Civil Code (different types of contracts and the respective rules on liability; performance; impairment of performance; the different ways by which property may be transferred and the *in rem* security rights) and of commercial and company law (especially in respect of the peculiarities of commercial transactions, commercial agency, the law of merchants as well as German law of business organizations);
- in the Private Law Exercises ("Privatrechtliche Übung") gains the skill to solve legal problems using legal methods.

Content

The focus is on special types of contract as well as on complex legal set-ups in the area of company law.

Courses in module *Commercial Law* [TVWL3JURA2]

ID	Course	Hours per week C/E/T	Term	CP	Responsible Lecturer(s)
24504	Advanced Civil Law (S. 156)	2/0	S	3	T. Dreier, P. Sester
24011	Commercial and Corporate Law (S. 149)	2/0	W	3	P. Sester
24506/24017	Exercises in Civil Law (S. 277)	2/0	W/S	3	P. Sester, T. Dreier

Module: Intellectual Property Law**Module key: [TVWL3JURA4]****Subject:** Law**Module coordination:** Thomas Dreier**Credit points (CP):** 9**Learning Control / Examinations**

The assessment mix of each course of this module is defined for each course separately. The final mark for the module is the average of the marks for each course weighted by the credits and truncated after the first decimal.

Prerequisites

Successful completion of the modules *Introduction to Civil Law* [TVWL1JURA1] and *Constitutional and Administrative Law* [TVWL1JURA2]

Conditions

None.

Learning Outcomes**Content****Courses in module *Intellectual Property Law* [TVWL3JURA4]**

24583	Computer Contract Law (S. 157)	2/0	S	3	M. Bartsch

Module: Private Business Law

Module key: [TVWL3JURA5]

Subject: Law

Module coordination: Peter Sester

Credit points (CP): 9

Learning Control / Examinations

The assessment mix of each course of this module is defined for each course separately. The final mark for the module is the average of the marks for each course weighted by the credits and truncated after the first decimal.

Prerequisites

For the courses

- *Civil Law for Advanced* [24650]
- *Law of Contracts* [24671],

basic knowledge in civil law as taught in the courses *Civil Law for Beginners* [24012], *Advanced Civil Law* [24504], and *Commercial and Corporate Law* [24011] is required.

Conditions

Successful completion of the modules *Introduction to Civil Law* [TVWL1JURA1] and *Constitutional and Administrative Law* [TVWL1JURA2]

Learning Outcomes

The student

- has gained in-depth knowledge of German company law, commercial law and civil law;
- is able to analyze, evaluate and solve complex legal and economic relations and problems;
- is well grounded in individual labour law, collective labour law and commercial constitutional law, evaluates and critically assesses clauses in labour contracts;
- recognizes the significance of the parties to collective labour agreements within the economic system and has differentiated knowledge of labour disputes law and the law governing the supply of temporary workers and of social law;
- possesses detailed knowledge of national earnings and corporate tax law and is able to deal with provisions of tax law in a scientific manner and assesses the effect of these provisions on corporate decision-making.

6.8 Sociology

Module: Sociology/Empirical Social Research

Module key: [TVWL3SOZ]

Subject: Sociology

Module coordination: Gerd Nollmann

Credit points (CP): 9

Learning Control / Examinations

The assessment is carried out as a general written exam (according to Section 4(2), 1 of the examination regulation). The specific theme of the written exam is arranged with the module coordinator personally. The single courses of the module are completed with an assessment as well. The assessment procedures are described for each course of the module separately.

The overall grade of the module corresponds to the grade of the written exam.

Prerequisites

Knowledge of Statistics 1 and Statistics 2 is required.

Conditions

None.

Learning Outcomes

The student

- Gains theoretical and methodical knowledge of social processes and structures
- Is able to apply acquired knowledge practically
- Is able to present work results in a precise and clear way

Content

This module offers students the possibility to get to know research problems and to answer these theoretically as well as empirically. For example: Who does earn how much in his job and why? How do subcultures emerge? Why are boys' grades in school always worse than those of girls? Do divorces have negative influences on the development of children? How does mass consumption influence the individual? Is there a world society emerging?

In addition, this module contains courses on sociological methods that are essential to answer the above questions scientifically.

Module: Qualitative Social Research**Module key: [TVWL3SOZ2]****Subject:** Sociology**Module coordination:** Gerd Nollmann, Pfadenhauer**Credit points (CP):** 9**Learning Control / Examinations**

The assessment is carried out as partial exams (according to Section 4(2) of the examination regulation) of the single courses of this module, whose sum of credits must meet the minimum requirement of credits of this module. The assessment procedures are described for each course of the module separately.

The overall grade of the module is the average of the grades for each course weighted by the credits and truncated after the first decimal.

Prerequisites

None.

Conditions

The lecture *Interpretative Social Research Methods* [n.n.] has to be completed successfully.

Learning Outcomes

The student

- possesses a basic overview of the well-established and some of the advanced explorative methods of data collection and interpretative methods of data evaluation,
- can address basic sociological questions to subjects of different types,
- and is capable of choosing and applying appropriate explorative-interpretative methods according to a research question.

Content

Qualitative Social Research is of major importance not only in (Social) Sciences but also in applied economic contexts. Within the framework of this module the student gets taught basic and advanced methods of non-standardised data collection, fixation and evaluation. Accordingly the module consists of three courses:

- the lecture 'Interpretative Social Research Methods' which ends with a written exam (4 LP).
- a course 'Special Sociology' of choice in which 2 or 4 credits have to be obtained (6 credits needed in course and project course combined).
- a project course focusing on explorative-interpretative methods in which 2 or 4 credits have to be obtained (6 credits needed in course and project course combined).

Courses in module *Qualitative Social Research* [TVWL3SOZ2]

6.9 General Modules

Module: Seminar Module

Module key: [TVWL3SEM]

Subject: nicht kategorisiert

Module coordination: Marliese Uhrig-Homburg, Studiendekan (Fak. f. Wirtschaftswissenschaften)

Credit points (CP): 9

Learning Control / Examinations

The modul examination consists of two seminars and of at least one key qualification (KQ) course (according to §4 (3), 3 of the examintaion regulation). A detailed description of every singled assessment is given in the specific course characerization.

The final mark for the module is the average of the marks for each of the two seminars weighted by the credits and truncated after the first decimal. Grades of the KQ courses are not included.

Prerequisites

All modules of the core programme should have been absolved.

Furthermore the course specific preconditions must be observed.

Conditions

- *Seminars:* Two seminars out of the course list, that have at least 3 CP each and are offered by a representative of the Faculty of Economics and Business Engineering, have to be chosen.
- Alternatively one of the two seminars can be absolved at a engineering department or at the Department of Mathematics. The seminar has to be offered by a representative of the respective department as well. The assessment has to meet the demands of the School of Economics and Business Engineering (active participation, term paper with a workload of at least 80 h, presentation). This alternative seminar **requires an official approval** and can be applied at the examination office of the School of Economics and Business Engineering. Seminars at the institutes wbk and IFL do not require these approval.
- *Key Qualification (KQ)-course(s):* One or more courses with at least 3 CP in total of additional key qualifications have to be chosen among the courses [HoC1-5]. More detailed information can be found at the course descriptions and on <http://www.hoc.kit.edu/sq-wahlbereiche>.

Learning Outcomes

The student

- investigates with a selected topic in a special subject,
- analyses and discusses topically issues in the course and within the final term paper,
- discusses, presents und defends subject-specific arguments within the given topic,
- plans and realizes the final term paper mostly autonomous.

Content

Competences which are gained in the seminar module especially prepare the student for composing the final thesis. Within the term paper and the presentation the student exercises himself in scientific working techniques supported by the supervisor.

Beside advancing skills in techniques of scientific working there are gained integrative key qualifications as well. A detailed description o these qualifications is given in the section "Key Qualifications" of the module handbook.

Furthermore, the module also includes additional key qualifications provided by the KQ-courses.

Courses in module *Seminar Module* [TVWL3SEM]

26131	Seminar Goethe's Faust and the 21st Century Economy (S. 231)	2	S	3	B. Wigger

Remarks

The listed seminar titles are placeholders. Currently offered seminars of each semester will be published on the websites of the institutes and in the course catalogue of the KIT. In general, the current seminar topics of each semester are already announced at the end of the previous semester. Furthermore for some seminars there is an application required.

Module: Internship

Module key: [TVWL3EXPRAK]

Subject: nicht kategorisiert

Module coordination: Der Vorsitzende des Prüfungsausschusses

Credit points (CP): 8

Learning Control / Examinations

The assessment is carried out by the evidence of completed full-time internships of at least eight weeks and a presentation of the internship in the form of a written report on the activities.

1. Information on evidence of completed full-time internships:

The internship is proofed by the certificate of the intern's office. The certificate has to be formally correct with official corporate letterhead and handwritten countersigned by a responsible employee of the company.

The certificate must at least contain the following information:

- * Company / Location
- * Duration: from ... to ...
- * Hours of work (weekly)
- * Working interruption, indicating the vacation and sick days
- * Department
- * Headwords to the activities

2. Information on the presentation:

The internship report should be at least one page (typewritten, not handwritten) for each Location. It must be countersigned by a representative of the intern's office.

Prerequisites

Internships, that were completed even before studying may be recognized, if the criteria for recognition are met. After recognition of the compulsory internship, there can be taken a semester off for a voluntary, student-related internship. The possibility is particularly interesting in view of the master programme, which requires internships of at least 20 weeks.

If the compulsory internship is absolved within the Bachelor Programme and if it takes at least 14 weeks, students may request tuition exemption, when at least 8 weeks of the internship takes place in the lecture time.

Conditions

Regarding to the election of the company, in which the internship is completed, there are no specific rules. Beside of banks, public administration or international organizations even large industrial companies be considered, because of the technical profile of the Bachelor Programme.

With a view to the future professional career, it is recommended to absolve the internship in a larger, possibly international company.

Learning Outcomes

Students

- engage in practical aspects of Economics Engineering and get to know the professional requirements,
- gain a general insight into the operations of a company,
- identify companies complexity and developing knowledge and skills, which facilitate the understanding of operational sequences,
- train key qualifications such as personal initiative (already in the application), team skills and the ability to integrate into occupational hierarchy.

Content

Primarily the internship should be done to gain economic and business work experiences. Certainly, the interns are free to integrate technical activities as well. A commercial internship provides an insight into business or administrative processes of business transactions. Therefore departments such as controlling, organizing, marketing and planning appear particularly suitable. It remains the companies and interns left, which stations and areas the intern will eventually go through. But the focus should always be in accordance with operational realities of the company.

Regarding the election of the company, in which the internship is absolved, there are no specific rules. Beside of banks, public administration or international organizations even large industrial companies be considered, because of the technical profile of the Bachelor Programme.

Remarks

Vacation days are not figured into the internship.

Only three sick leave days may incurred at all. Any additional sick days are not figured into the internship.

A relevant vocational education of at least two years is accepted as a performance equivalent to the internship.

It is recommended to do the internship before start of study.

Module: Bachelor Thesis**Module key: [TVWL3THESIS]****Subject:** nicht kategorisiert**Module coordination:** Der Vorsitzende des Prüfungsausschusses**Credit points (CP):** 12**Learning Control / Examinations**

The Bachelor Thesis is a written exam which shows that the student can autonomously investigate a scientific problem in Economics Engineering. The Bachelor Thesis is described in detail in § 11 of the examination regulation.

The review is carried out by at least one examiner of the School of Economics and Business Engineering, or, after approval by at least one examiner of another faculty. The examiner has to be involved in the degree programme. Involved in the degree programme are the persons that coordinate a module or a lecture of the degree programme.

The regular processing time takes three months. On a reasoned request of the student, the examination board can extend the processing time of a maximum of one month. If the Bachelor Thesis is not completed in time, this exam is "failed", unless the student is not being responsible (eg maternity leave).

With consent of the examiner the thesis can be written in English as well. Other languages require besides the consent of the examiner the approval of the examination board. The issue of the Bachelor Thesis may only be returned once and only within the first month of processing time. A new topic has to be released within four weeks.

The overall grade of the module is the grade of the Bachelor Thesis.

Prerequisites

Prerequisite for admission to the Bachelor thesis is that the student is usually in the 3rd Academic year (5th and 6th semester) and has at most one of the exams of the core program (according to § 17 paragraph 2 examination regulation) not been completed.

It is recommended to begin the Bachelor Thesis in the 5th or 6th Semester.

A written confirmation of the examiner about supervising the Bachelor's Thesis is required.

Conditions

Please pay regard to the institute specific rules for supervising a Bachelor Thesis.

The Bachelor Thesis has to contain the following declaration: "I hereby declare that I produced this thesis without external assistance, and that no other than the listed references have been used as sources of information. Passages taken literally or analogously from published or non published sources is marked as this." If this declaration is not given, the Bachelor Thesis will not be accepted.

Learning Outcomes**Content**

The Bachelor Thesis is the first major scientific work. The topic of the Bachelor Thesis will be chosen by the student themselves and adjusted with the examiner. The topic has to be related to Economics Engineering and has to refer to subject-specific or interdisciplinary problems.

7 Courses

7.1 Foundation

Course: Economics I: Microeconomics

Course key: [25512]

Lecturers: Siegfried Berninghaus

Credit points (CP): 5 **Hours per week:** 3/0/2

Term: Wintersemester **Level:** 1

Teaching language: Deutsch

Part of the modules: Economics [TVWL1VWL] (S. 17)

Learning Control / Examinations

The assessment consists of a written exam (120 min) following §4, Abs. 2, 1 of the examination regulation.

There may be offered a practice exam in the middle of the semester. The results of this exam may be used to improve the grade of the main exam. A detailed description of the examination modalities will be given by the respective lecturer.

The main exam takes place subsequent to the lecture. The re-examination is offered at the same examination period. Only repeating candidates are entitled for taking place the re-examination. For a detailed description on the exam regulations see the information of the respective chair.

Prerequisites

None.

Conditions

None.

Learning Outcomes

It is the main aim of this course to provide basic knowledge in economic modelling. Particularly, the student should be able to analyze market processes and the determinants of market results. Furthermore, she should be able to evaluate the effects of economic policy measures on market behavior and propose alternative but more effective policy measures.

In particular, the student should learn

- to apply simple microeconomic concepts,
- to analyze the structure of real world economic phenomena,
- to judge the possible effects of economic policy measures on the behavior of economic agents (in simple decision problems),
- to possibly suggest alternative policy measures,
- to analyze as a participant of a tutorial simple economic problems by solving written exercises and to present the results of the exercises on the blackboard,
- practicing to solve the home work in due time,
- to become familiar with the basic literature on microeconomics.

The student should gain basic knowledge in order to help in practical problems

- to analyze the structure of microeconomics relationships and possibly to present own problem solutions,

Content

The students learn the basic concepts in Microeconomics and some basics in game theory. The student will understand the working of markets in modern economies and the role of decision making. Furthermore, she should be able to understand simple game theoretic argumentation in different fields of Economics.

In the two main parts of the course problems of microeconomic decision making (household behavior, firm behavior) and problems of commodity allocation on markets (market equilibria and efficiency of markets) as well are discussed. In the final part of the course basics of imperfect competition (oligopolistic markets) and of game theory are presented.

- Frank, Robert H., Microeconomics and Behavior, 5. Aufl., McGraw-Hill, New York, 2005

Complementary literature

- Offer for interested and top students: detailed top articles with proofs, algorithms, ... state-of-the-art surveys, industrial magazines and scientific journals, pointers to recent developments related to the course.
- Tutorials and perhaps simpler literature alternatives for students to fill in gaps in prerequisites (or to fresh up their memory). Alternatives with a different mode of explanation to help students understand ...

Course: Economics II: Macroeconomics**Course key: [25014]****Lecturers:** Berthold Wigger**Credit points (CP):** 5 **Hours per week:** 3/0/2**Term:** Sommersemester **Level:** 1**Teaching language:** Deutsch**Part of the modules:** Economics [TVWL1VWL] (S. [17](#))**Learning Control / Examinations**

The assessment consists of a written exam (120 min) according to Section 4(2), 1 of the examination regulation.

The assessment takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes**Content**

The lecture deals with the following topics:

Chapter 1: Macroeconomic targets

Chapter 2: Gross domestic product: a classical model

Chapter 3: Economic growth

Chapter 4: Money and inflation

Chapter 5: The open economy

Chapter 6: IS-LM model and business cycles

Chapter 7: Mundell-Fleming Model

Chapter 8: Macroeconomic equilibrium

Chapter 9: Unemployment

Complementary literature

Course: Financial Accounting and Cost Accounting**Course key: [25002/25003]****Lecturers:** Thomas Burdelski**Credit points (CP):** 4 **Hours per week:** 2/2**Term:** Wintersemester **Level:** 1**Teaching language:** Deutsch**Part of the modules:** Business Administration [TVWL1BWL] (S. 18)**Learning Control / Examinations**

The assessment consists of a written exam (120 min) following §4, Abs. 2, 1 of the examination regulation.

The examination takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Business transactions are economic events that affect the financial position of a business entity. After this basic course students have to be familiar with the principles of Financial and Management Accounting especially with the four financial statements and the instruments of a cost accounting system.

Content

After an introduction to the objectives of accounting the student will learn the double- Entry- System, the basic method of accounting, and the difference between accounting and bookkeeping. We examine the typical business transactions for Trading Companies and Industrial Enterprises. Financial statements are the primary means of communicating important accounting information about a business to those who have an interest in the business. Four major financial statements are used to communicate accounting information: the income statement, the statement of retained earnings, the balance sheet and the statement of cash flows, here in the context with german laws (HGB). In the second part of the course the cost accounting instruments will be analyzed: cost type accounting, cost center accounting, and unit of output costing. Aspects of modern systems in Management Accounting conclude this basic course.

The assessment takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

After this basic course students have to be familiar with the fundamentals of General Business Administration and the principles of Management Sciences.

This is necessary to understand the following courses Business Administration and Management Science B und C.

Content

The agenda and the following topics are treated:

- Fundamentals of Business Administration and Management Science
- Legal forms of business organisations
- Targets of corporations and corporate policy
- Analytical and planning instruments
- Decision analysis and decision making in a corporation
- The income statement as a business card of business activities
- Tax payments for a company

Remarks

The course Rechnungswesen which is held concurrently is taken into account concerning specific problems.

Course: Business Administration and Management Science B Course key: [25024/25025]

Lecturers: Wolfgang Gaul, Thomas Lützkendorf, Andreas Geyer-Schulz, Christof Weinhardt, Thomas Burdelski

Credit points (CP): 4 **Hours per week:** 2/0/2

Term: Sommersemester **Level:** 1

Teaching language: Deutsch

Part of the modules: Business Administration [TVWL1BWL] (S. 18)

Learning Control / Examinations**Prerequisites**

None.

Conditions

None.

Learning Outcomes

The target of this course and the tutorials of this course are the basic points of marketing, production economics and information engineering and management.

After this basic course students have to be familiar with these three topics in Business Administration and Management Science.

Content**1. Marketing:**

Marketing is an organizational function to handle situations, activities, and processes for creating, communicating, and delivering value to customers in a best way. (Customer) relationship management comprises collecting, aggregating, and analyzing information (e.g., developments in the society, changing conditions of markets, alterations w.r.t. buying behavior) to benefit different target groups.

Main topics will deal with market research and optimized application of marketing mix instruments with emphasis on "marketing and the web", "innovation management", and "international marketing".

2. Production economics

In the part of production economics the student will learn basics in the field of production theory, procurement and resource acquisitions, production and operations management and industrial engineering.

Aspects of electrical engineering industry, technological foresights, construction industry and real estate markets will be treated.

3. Information engineering and management

In today's economy, information is a competitive factor that calls for an interdisciplinary investigation from economics and business administration, informatics and law. In this part of the lecture, selected topics from information engineering and management and their impact in market competition are presented

Topics include: Information in a company, Information processing: From an agent to business networks, social networks, service value networks, complex service auction, market engineering, physioeconomics, grid und cloud computing, dynamic pricing.

Basic literature

Further literature references are announced in the materials to the lecture.

Remarks

Key qualifications can be shown in an active participation through presentations of solutions and discussions in the tutorials which accompany the course. Each part of the course is taught by instructors specialised in the field of that part.

Course: Business Administration and Management Science C Course key: [25026/25027]

Lecturers: Hagen Lindstädt, Martin E. Ruckes, Marliese Uhrig-Homburg, Thomas Burdelski

Credit points (CP): 4 **Hours per week:** 2/0/2

Term: Wintersemester **Level:** 1

Teaching language: Deutsch

Part of the modules: Business Administration [TVWL1BWL] (S. 18)

Learning Control / Examinations

Prerequisites

None.

Conditions

None.

Learning Outcomes

The goal of this course and the tutorials of this course is to equip students with the fundamentals and basics in the fields of management and organization, investment und finance and the german specific term controlling. After this course students have to be familiar with these three topics in business administration and management science.

Content

1. Management and Organization

A) Foundations of Management

B) Foundations of Strategic Management

- Process of Strategic Management
- Strategic Analysis using the SWOT Framework
- Formulating Strategic Options
- Evaluation and Choice

C) Foundations of Organization

- Why do Organizations exist?
- Objectives, Measures and Conditions of Managing Organizations
- Level 1: Division of Labour and Design of Departments
- Level 2: Choosing the Hierarchical Structure
- Level 3: Coordination and Formalization

D) Agency-theoretic Foundations:

- Organization under Asymmetric Organization
- Three Types of Informational Asymmetries
- Type 1: Hidden Intention and Holdup
- Type 2: Hidden Characteristics and Adverse Selection
- Type 3: Hidden Action and Moral Hazard

2. Investment and Finance

This part of the course deals with the fundamentals of capital market theory und provides a modern introduction to the theory und practice of capital raising and capital budgeting.

These topics are covered:

- Valuation of financial und real investments
- Portfolio theory
- Pricing in financial markets
- Theory and practice of corporate finance
- Arbitrage

3. Controlling

Planning, control (e. g. monitoring), organization, leadership and information systems are the core elements of a business management system. These fields have to be coordinated with one another to achieve the corporate goals in an optimal way. This coordinating function is the main task of the german specific term controlling. Thus, controlling fulfils the coordinating task within the management system in an essential way.

These topics are covered:

- Fundamentals of controlling und its context
- Instruments of controlling for business planning and control/monitoring (selected operational instruments, benchmarking as a tactical instrument and portfolio analysis as a strategic instrument)
- Instruments of controlling for information systems (performance indicators und reporting)

Basic literature

Extensive bibliographic information will be given in the materials to the lecture.

Remarks

Key qualifications can be shown in an active participation through presentations of solutions and discussions in the tutorials which accompany the course. Each part of the course is taught by instructors specialised in the field of that part.

Course: Introduction to Programming with Java**Course key: [25030]****Lecturers:** Detlef Seese**Credit points (CP):** 5 **Hours per week:** 3/1/2**Term:** Wintersemester **Level:** 1**Teaching language:** Deutsch**Part of the modules:** Introduction to Informatics [TVWL1INFO] (S. [19](#))**Learning Control / Examinations**

The assessment consists of a written resp. computer-based exam (120 min) according to Section 4 (2),1 of the examination regulation.

The successful completion of the compulsory tests in the computer lab is prerequisites for admission to the written resp. computer-based exam.

The examination takes place every semester. Re-examinations are offered at every ordinary examination date.

Additional literature will be announced in the lecture.

Course: Foundations of Informatics II**Course key: [25076]****Lecturers:** Hartmut Schmeck**Credit points (CP):** 5 **Hours per week:** 3/1**Term:** Wintersemester **Level:** 1**Teaching language:** Deutsch**Part of the modules:** Introduction to Informatics [TVWL1INFO] (S. [19](#))**Learning Control / Examinations**

The assessment consists of a written exam (90 min.) according to Section 4(2), 1 of the examination regulation.

If the grade obtained in the written exam is in between 1.3 and 4.0, a successful completion of the assignments or of a bonus exam will improve the grade by one level.

The examination takes place every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

It is recommended to attend the course *Foundations of Informatics I* [25074] beforehand.

Active participation in the practical lessons is strongly recommended.

Conditions

None.

Learning Outcomes**Content****Complementary literature**

Will be announced in the lecture.

Course: Introduction to Operations Research I**Course key: [25040]****Lecturers:** Stefan Nickel, Oliver Stein, Karl-Heinz Waldmann**Credit points (CP):** 4.5 **Hours per week:** 2/2/2**Term:** Sommersemester **Level:** 2**Teaching language:** Deutsch**Part of the modules:** Introduction to Operations Research [TVWL1OR] (S. [20](#))**Learning Control / Examinations**

Content

Examples for typical OR problems.

Linear Programming: Basic notions, simplex method, duality, special versions of the simplex method (dual simplex method, three phase method), sensitivity analysis, parametric optimization, game theory.

Graphs and Networks: Basic notions of graph theory, shortest paths in networks, project scheduling, maximal and minimal cost flows in networks.

Media

Course: Civil Law for Beginners**Course key: [24012]****Lecturers:** Thomas Dreier, Peter Sester**Credit points (CP):** 4 **Hours per week:** 4/0**Term:** Wintersemester **Level:** 1**Teaching language:** Deutsch**Part of the modules:** Introduction to Civil Law [TVWL1JURA1] (S. 21)**Learning Control / Examinations**

The assessment consists of a written exam (90 min) according to Section 4, (2), 1 of the examination regulation.

Prerequisites

None.

Conditions

None.

Learning Outcomes

To begin with, the course provides students with a general introduction into law. It shall enable them to understand legal problems and solutions both with regard to lawmaking and to individual cases. Students shall grasp the differences between civil law, public law and criminal law. In particular, students shall learn the fundamental notions and constructions of Civil law as laid down in the German Civil Code (Bürgerliches Gesetzbuch, BGB), such as subjects and objects of law, legally binding declarations, the formation of contracts, standard terms and conditions, consumer protection, performance of contractual promises etc. Students shall be trained to understand legal problems and legal solutions. They shall be able to recognise the legal problems of a given factual situation and develop solutions to simple legal problems.

Content

The course starts with a general introduction into law. What is law, why are legal rules valid, and what is the role of law in conjunction with social behaviour, technological and market developments? What is the relationship between law and justice? Moreover, the distinction between civil law, public law and criminal law will be highlighted. The basics of jurisdiction, international conflicts and alternative dispute settlement will be discussed. The main focus of the course is on the fundamental notions of civil law as defined and regulated in the German Civil Code (Bürgerliches Gesetzbuch, BGB), such as subjects and objects of law, legally binding declarations, agency, the formation of contracts, standard terms and conditions, consumer protection, performance of contractual promises. The course ends with an outlook to the law of contracts and property law.

Course: Public Law I - Basic Principles**Course key: [24016]****Lecturers:** Indra Spiecker genannt Döhmann**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 2**Teaching language:** Deutsch**Part of the modules:** Constitutional and Administrative Law [TVWL1JURA3] (S. [22](#))**Learning Control / Examinations**

The assessment consists of a written exam concerning the courses *Public Law I* [24016] and *Public Law II* [24520] (according to Section 4(2), 1 of the examination regulation).

Prerequisites

None.

Conditions

None.

Learning Outcomes

The lecture covers the core principles of public law. Students shall become acquainted with the basics of constitutional law, the fundamental rights which route governmental actions and the entire legal system, as well as possibilities of actions and instruments (especially law, administrative act, public-private contract) of the public authority. Furthermore the distinction between public and private law will be clarified. Moreover, possibilities of legal protection regarding administrative behavior will be addressed. Students shall learn to classify problems in public law and to solve (simple) administrative and constitutional cases.

Content

The course covers core material of constitutional and administrative law. It begins with the differentiation between public and private law. In the constitutional law part, the course will concentrate on the rule of law and individual rights, especially those protecting communication and entrepreneurship. The administrative law part will explain the different legal instruments of the administration how to act (rule, order, contract, etc.) and their propositions. Also, court proceedings to sue the administrative will be discussed. Students will learn the technique how to solve (simple) administrative and constitutional cases

Remarks

From the winter term 2008 on, the *Public Law I* will be lectured during the winter termn and *Public Law II* will be lectured during the summer term. This means:

1. In the winter term 2008/2009, Public Law I was being lectured.
2. In the summer term 2009, Public Law II will be lectured.

Course: Public Law II - Public Economic Law**Course key: [24520]****Lecturers:** Indra Spiecker genannt Döhmann**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Sommersemester **Level:** 2**Teaching language:** Deutsch**Part of the modules:** Constitutional and Administrative Law [TVWL1JURA3] (S. 22)**Learning Control / Examinations**

The assessment consists of a written exam concerning the courses *Public Law I* [24016] and *Public Law II* [24520] according to Section 4(2), 1 of the examination regulation.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Public economic law is of significant importance to supervise the German economy. In order to understand the functionality of mandatory interventions into market mechanisms in a thoroughly normed legal system, appropriate legal knowledge is required. This knowledge is to be provided in the lecture. In doing so, substantive law ought to be dealt with in a deepened way, while responsible authorities and institutions as well as possibilities of legal protection in the area of public commercial law will be taught at a glance. The lecture's primary aim is to exercise handling the corresponding legal norms. It proceeds the lecture *public law I*.

Content

In a first step legal basics of the economic system (such as financial system and freedom of property and profession) will be presented. In this context, interaction between the Basic Constitutional Law and presettings of European Community law will be elaborated on as well. Thereafter, regulatory instruments of the administrative law will be analysed extensively. As particular matters, we will deal with industrial code, further trade law (handicrafts code; law of gastronomy), basic principles of telecommunication law, state aid law and public procurement law. A last part is devoted to the institutional design of the economy's regulation.

Remarks

In winter term 2008 on, the *Public Law I* will be lectured during the winter term and *Public Law II* will be lectured during the summer term. This means:

1. In the winter term 2008/2009, Public Law I will be lectured.
2. In the summer term 2009, Public Law II will be lectured.

Course: Mathematics I**Course key: [01350]****Lecturers:** Günter Last, Folkers, Klar**Credit points (CP):** 7 **Hours per week:** 4/2/2**Term:** Wintersemester **Level:** 1**Teaching language:** Deutsch**Part of the modules:** Mathematics [TVWL1MATH] (S. [23](#))**Learning Control / Examinations**

The assessment of *Mathematics I* consists of two written partial exams (both according to Section 4 (2), 1 of the examination regulation):

1. Midterm exam after half of the lecture time (60 min) without utilities
2. Final exam at the beginning of the following recess period (60 min) without utilities

A re-examination is offered at the beginning of the lecture period of the following summer term. Both re-examinations taking place at the same day.

For the re-examinations both types of candidates (candidates who failed the midterm or the final exam, as well as those candidates who do not yet have passed their first attempt) are admitted.

Oral re-examinations (according to Section 8 (2) of the examination regulation) take place as individual examinations (ca. 20 min).

Mid-term exam as well as final exam has to be passed separately. The overall grade of *Mathematics 1* consists of the grade of the midterm exam (50 percent) and the final exam (50 percent).

Prerequisites

The assessment consists of a written exam according to Section 4 (2), 1 of the examination regulation.

The exam takes place at the end of the lecture period or at the beginning of the recess period. The re-examination takes place in the following semester.

Prerequisites

It is recommended to attend the course *Statistics I* [25008/25009] before the course *Statistics II* [25020/25021].

Conditions

None.

Learning Outcomes

probability theory (continued), Introduction to estimation and testing theory

Content

B. Probability Theory:

- transformation of probabilities,
- parameters of location and dispersion,
- most important discrete and continuous distributions,
- covariance and correlation,
- convolution and limit distributions

C. Theory of estimation and testing:

- sufficiency of statistics,
- point estimation (optimality, ML-method),
- interval estimations,
- theory of tests (optimality, most important examples of tests)

Course: Social structures of modern societies**Course key: [11005]****Lecturers:** Gerd Nollmann**Credit points (CP):** 4 **Hours per week:** 2**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Sociology/Empirical Social Research [TVWL3SOZ] (S. [74](#))**Learning Control / Examinations**

The assessment consists of a written test according to Section 4 (2), 3 of the examination regulation. The test will be graded. The test takes place in the last lecture. Generally re-examinations are offered six weeks later.

Prerequisites

None.

Conditions

The lecture is obligatory in the module and has to be completed.

Learning Outcomes

The student:

- Gains knowledge on social structures of modern societies
- Describes and explains current societal processes
- Gets to know selected research, problems and data.

Content

The lecture begins with definitions of social structures and their relation to the culture of human behaviour. Furthermore, important research, current debates, and controversies will be presented as well as continuity and change of German social structures in comparative fashion.

Important topics will be modernisation, individualisation, class structures, education and job market, social mobility, life courses and cohorts, distributions of income and wealth, family, marriage market, fertility.

The lecture stresses knowledge about data sources, official statistics, and relevant results of survey research.

Course: Design Basics in Highway Engineering**Course key: [19026]****Lecturers:** Ralf Roos**Credit points (CP):** 3 **Hours per week:** 1/1**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Fundamentals of Spatial and Infrastructural Development [TVWL3INGBGU1] (S. [64](#))**Learning Control / Examinations**

See module description.

Prerequisites

None.

Conditions

See corresponding module information.

Learning Outcomes

Provision of first insights into methodologies and techniques in the fields of highway design and road construction.

Content

- Highway design
- Road network layout
- Driving dynamics
- Fundamental principles of highway design in location, elevation and cross section
- Road construction
- Earthworks (requirements and test methods)
- Pavements (structure, construction methods and requirements)
- Pavement design according to the German guideline RStO

Media

Course: Basics in Transport Planning and Traffic Engineering**Course key: [19027]****Lecturers:** Dirk Zumkeller, Chlond**Credit points (CP):** 3 **Hours per week:** 1/1**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Fundamentals of Spatial and Infrastructural Development [TVWL3INGBGU1] (S. [64](#))**Learning Control / Examinations**

See module description.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Provision of first insights into methodologies and techniques in the fields of transport planning and traffic engineering.

Content

The course is forming the fundamentals in the field as well the necessary technical knowledge. It is separated into two parts.

In the transport planning part the following basics are considered:

- content of the transport field
- definitions and terminology
- spatial representation
- transport relations in survey areas
- representation of spatial relationships in matrices
- information sources / data for transport demand modelling
- aggregated planning models (assignment)

In the second part the first basics of traffic engineering are considered:

- trajectories of vehicles on sections
- the fundamental diagram
- capacities and traffic loads on roads
- capacity considerations of unsignalized intersections
- fundamentals of traffic signaling and control

Course: Spatial Planning and Planning Law**Course key: [19028]****Lecturers:** Engelke, Heberling**Credit points (CP):** 3 **Hours per week:** 1/1**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Fundamentals of Spatial and Infrastructural Development [TVWL3INGBGU1] (S. [64](#))**Learning Control / Examinations**

The assessment of the module is a written examination (40 minutes) according to Section 4(2), 1 of the examination regulation. The exam takes place every semester as well as the reexamination. In case of failing or to improve the examination grade an additional oral examination (according to Section 4(2), 2 of the examination regulation) is offered in the same examination periode. The grade of the module corresponds to the grade of the written examination or the average of the marks for the written and the oral assessment.

.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The educational aim of the lecture is to give a first view on spatial planning and its main tasks. At the end of the semester the participants should be able to work on modest issues of spatial planning on the local level. This is due to assess quantitative aspects like temporal processes and display spatial data.

Content

- Tasks and strategies of spatial planning
- Spaces, uses and conflicts of local planning
- Spatial planning on the local level: Properties and buildings including the public technical and social infrastructure
- Planning on municipality level
- Sustainable settlement structure and land use management
- Historic view on urbanism and regional development
- Planning on different levels: Regional plans, structure plans and zoning plans
- Spatial planning and the European Dimension
- Real estate economy
- Exercise: Urban Planning in Karlsruhe Nordstadt

Course: Material Flow in Logistic Systems**Course key: [21051]****Lecturers:** Kai Furmans**Credit points (CP):** 6 **Hours per week:** 3/1**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))**Learning Control / Examinations**

The assessment consists of a written exam according to Section 4 (2), 1 of the examination regulation. The grade of the exam may be improved by passing case studies.

Prerequisites

None.

Conditions

None.

Learning Outcomes

This course provides the basics of material handling systems. The student will learn how to model material handling systems and how to evaluate them according to quantitative aspects.

Content

- Material handling equipment: conveyor system, diverts, merges
- Modelling of material handling systems by graphs and matrixes
- Queueing theory
- Simulation
- Analysis of the current situation
- Planning of the target state by using material and information flow

Complementary literature

Arnold, Dieter; Furmans, Kai: Materialfluss in Logistiksystemen, Springer, 2005 (VDI)

Remarks

The course was formerly known as *Materialflow*.

Course: Airport Logistics**Course key: [21056]****Lecturers:** Richter**Credit points (CP):** 4 **Hours per week:** 2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))**Learning Control / Examinations**

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Giving an inside view of the conveyor and material handling technical activities on airports is the aim of this course. Furthermore an overview of air traffic and the legal situation is given.

Content

Development of air traffic:

- Legal basics
- Infrastructure (among other things person, luggage and freight conveyance)
- Supply and disposal activities
- Logistic process networks
- Information logistics

Remarks

The course takes place as a block course.

Course: Safety Engineering**Course key: [21061]****Lecturers:** Kany**Credit points (CP):** 4 **Hours per week:** 2**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Safety Science I [TVWLINGINTER3] (S. 68), Safety Science II [TVWLINGINTER2] (S. 69)**Learning Control / Examinations**

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

None.

Conditions

None.

Learning Outcomes**Content**

The course provides basic knowledge of safety engineering. In particular the basics of health at the working place, job safety in Germany, national and European safety rules and the basics of safe machine design are covered. The implementation of these aspects will be illustrated by examples of material handling and storage technology. This course focuses on: basics of safety at work, safety regulations, basic safety principles of machine design, protection devices, system security with risk analysis, electronics in safety engineering, safety engineering for storage and material handling technique, electrical dangers and ergonomics. So, mainly, the technical measures of risk reduction in specific technical circumstances are covered.

Course: Combustion Engines A**Course key: [21101]****Lecturers:** Spicher**Credit points (CP):** 8 **Hours per week:** 4/2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Combustion Engines [TVWL3INGMB16] (S. [60](#)), Engine Development [TVWL3INGMB17] (S. [61](#))**Learning Control / Examinations**

The assessment consists of a written exam (120 min) according to §4 (2), 1 of the examination regulation. The grade of the exam is included in the overall grade of the module with a weighting factor of 6.

Prerequisites

It is recommended to have basic knowledge of thermodynamics.

Conditions

None.

Learning Outcomes**Content**

Course: Manufacturing Engineering**Course key: [21657]****Lecturers:** Volker Schulze**Credit points (CP):** 9 **Hours per week:** 4/1**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Production Engineering I [TVWL3INGMB10] (S. 58), Production Engineering II [TVWL3INGMB4] (S. 59)**Learning Control / Examinations**

The assessment consists of a written exam (180 min) taking place at the beginning of the recess period (according to Section 4(2), 1) of the examination regulation).

The examination takes place every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student

- is able to **name** the different manufacturing methods and to **explain** their functions
- is able to **classify** the manufacturing methods by their general structure and functionality according to specific main groups
- is able to **perform** a process selection based on the methods he/she has **learned about** and their characteristics
- is able to **identify** the **correlation** between different methods
- is able to **evaluate** the different methods against specific applications on the basis of technical and economical aspects

Content

The objective of the lecture is to look at manufacturing engineering within the wider context of production engineering, to provide an overview over the different manufacturing methods and to impart detailed process knowledge of the common methods. The lecture covers the basic principles of manufacturing engineering and deals with the manufacturing methods according to their classification into main groups on the basis of technical and economical aspects. The lecture is completed with topics such as process chains in manufacturing.

The following topics will be covered:

- Introduction
- Quality control
- Primary processing (casting, plastics engineering, sintering, generative methods),
- Forming (sheet-metal forming, massive forming, plastics engineering),
- Cutting (machining with geometrically defined and geometrically undefined cutting edges, separating, abrading)
- Joining
- Coating
- Heat treatment and surface treatment
- Process chains in manufacturing
- Work preparation

Media

Slides and lecture notes for the manufacturing engineering lecture will be made available through Ilias.

Course: Integrated Production Planning**Course key: [21660]****Lecturers:** Lanza**Credit points (CP):** 9 **Hours per week:** 4/1**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Production Engineering I [TVWL3INGMB10] (S. 58), Production Engineering II [TVWL3INGMB4] (S. 59)**Learning Control / Examinations**

Performance is assessed in the form of one written examination (180 min) during the lecture-free period (as per §4(2), 1 SPO [study and examination regulations]). The examination will take place once every semester and can be retaken at every official examination date.

Prerequisites

It is recommended to attend the course *Manufacturing Technology* [21657] beforehand.

Conditions

None.

Learning Outcomes

The student

- has knowledge of the content covered by this lecture and understands the challenges and the fields of action of integrated production planning,
- is able to apply the methods of integrated production planning he/she has learned about to new problems,
- is able to analyse and evaluate the suitability of the methods, procedures and techniques he/she has learned about for a specific problem.

Content

Planning factories within the context of value networks and integrated production systems (Toyota etc.) requires an integrated perspective for the consideration of all functions included in the “factory” system. This includes the planning of manufacturing systems including the product, the value network and factory production, and the examination of SOPs, the running of a factory and maintenance. Content and theory covered by this lecture are completed with many examples from industry and exercises based on real-life situations and conditions.

Main topics covered by the lecture:

1. The basic principles of production planning
2. Links between product planning and production planning
3. Integrating a production site into a production network
4. Steps and methods of factory planning
5. Approach to the integrated planning of manufacturing and assembly plants
6. Layout of production sites
7. Maintenance
8. Material flow
9. Digital factory
10. Process simulation for material flow optimisation
11. Start-up

Media

Lecture notes of the lecture *Integrated Production Planning*

Course: International Production and Logistics**Course key: [21692]****Lecturers:** Lanza**Credit points (CP):** 3 **Hours per week:** 2**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))**Learning Control / Examinations**

The assessment will consist of a written exam (120 min) taking place in the recess period (according to §4 (2), 1 of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

It is the aim of the course to show opportunities and basic requirements of an enterprise acting abroad. The focus lies on production and operation activities.

Content

Within the course, foreign trade theories, legal and economical backgrounds as well as opportunities and threats of international production will be considered. The structure of international logistics networks and approaches to model, design and analyse such networks will be discussed. Based on examples from practice and science, challenges of international logistics will be shown.

Remarks

The lecture will not be offered any more. Final examinations take place in september 2010. From the winter term 2010/11 on, a successor lecture will be held.

Course: Radiation Protection and Nuclear Emergency Protection**Course key: [21930]****Lecturers:** N.N.**Credit points (CP):** 4 **Hours per week:** 2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Safety Science I [TVWLINGINTER3] (S. 68), Safety Science II [TVWLINGINTER2] (S. 69)**Learning Control / Examinations**

The assessment consists of an oral exam (20 min) taking place in the recess period (according to Section 4(2), 2 of the examination regulation). The examination takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

Basic knowledge of physics/nuclear physics of the secondary school is assumed (atomic structure, electrons, etc.)

Conditions

None.

Learning Outcomes**Content****Remarks**

Block course.

For further information, see <http://www.ikr.uni-karlsruhe.de/377.php>

Course: Energy Generation**Course key: [23356]****Lecturers:** Bernd Hoferer**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Electrical Power Engineering [TVWL3INGETIT1] (S. 63)**Learning Control / Examinations**

The assessment consists of an oral exam (20 min) taking place at the beginning of the recess period (according to Section 4 (2), 2 of the examination regulation). The exam takes place in every winter semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The goal is to relay theoretical fundamentals.

The lecture covers the entire topic of power generation from conversion of primary energy resources in coal fired power plants and nuclear power plants to utilisation of renewable energy. The lecture gives a review of the physical fundamentals, technical/economical aspects and potential for development of power generation both conventional generation and renewable generation.

Content

- Energy resources
- Energy consumption
- Types and use of power plants
- Conversion of primary energy in power plants
- Thermodynamical fundamental terms
- Process in steam power plants
- Steam power plants components
- Flue gas cleaning
- Thermal power plants
- Nuclear power plants
- Hydroelectric power plants
- Wind energy converters
- Solar energy plants

Media

Material is available at the beginning of the lecture.

Complementary literature

Schwab; Elektroenergiesysteme; 1. Auflage 2006.

Course: Diagnostics on Power Network Equipment**Course key: [23365]****Lecturers:** Thomas Leibfried**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Electrical Power Engineering [TVWL3INGETIT1] (S. 63)**Learning Control / Examinations**

The assessment consists of a written exam taking place at the beginning of the recess period (according to Section 4 (2), 2 of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The goal is to relay further and deeper theoretical fundamentals in the field of electric power technology and power transmission. In the first part the lecture deals with the terms monitoring and diagnostics. Subsequently, the three diagnosis techniques dielectric analysis, partial discharge measurement and frequency response analysis are presented and mathematically discussed. Finally, the diagnostic methods of power transformers and generators are described.

Content

In its first part, this lecture introduces the terms monitoring and diagnostics. Doing this, the age distribution of the power network equipment in the German power grid is analyzed and the required investment within the next 10 years is estimated. Using this estimation, the necessity of condition monitoring of electric power system equipment is derived.

The second chapter deals with the dielectric analysis. First of all, the characteristics of insulations materials are discussed and a model for the description of polarisation mechanisms in the frequency domain and the time domain is derived. This enables the condition monitoring of insulation systems by three methods: the relaxation current analysis, the dissipation factor measurement over a wide frequency range and the recovery voltage measurement.

The third chapter deals with the partial discharge measurement. At first, the phenomenon of partial discharges will be discussed. Then, techniques for the measurement of partial discharges are presented. Finally, systems and their functionality for the measurement of the apparent charge, which occurs in an insulation system is described.

The fourth chapter deals with the frequency response analysis. In the first step the theoretical basics of the frequency response analysis are described. Subsequently, the different methods of the frequency response measurement are discussed.

The fifth chapter deals with power transformer diagnostics. Steps by step the standard and the more advanced diagnostic methods are described. In the sixth and last chapter the methods for diagnostics on generators (rotating machinery) are described.

Media

Online material is available on: www.ieh.uni-karlsruhe.de and can be downloaded using a password.

Course: Technique of Electrical Installation**Course key: [23382]****Lecturers:** Kühner**Credit points (CP):** 3 **Hours per week:** 2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Electrical Power Engineering [TVWL3INGETIT1] (S. 63)**Learning Control / Examinations**

The assessment consists of an oral exam (20 min) taking place at the beginning of the recess period (according to Section 4 (2), 2 of the examination regulation). The exam takes place in every summer semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The goal is to relay practical fundamentals.

The lecture gives an overview about the classical and modern methods of electrical installations of and in buildings.

Furthermore the students get an insight to regulations and engineer standards.

Content

- Capture 1: Electrical Power Distribution and Networking
- Capture 2: Electrical Power Supply of Buildings
- Capture 3: Electrical Power Supply in Buildings
- Capture 4: Protective Equipments
- Capture 5: Electrical Energy Applications
- Capture 6: Electrical Automation and System Engineering of Buildings
- Capture 7: Powermanagement of Buildings

Media

Online material is available on: http://www.ieh.unikarlsruhe.de/elektrische_installationstechnik.php

Course: Power Transformations**Course key: [23390]****Lecturers:** Schäfer**Credit points (CP):** 3 **Hours per week:** 2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Electrical Power Engineering [TVWL3INGETIT1] (S. 63)**Learning Control / Examinations**

The assessment consists of an oral exam (20 min) taking place at the beginning of the recess period (according to Section 4 (2), 2 of the examination regulation). The exam takes place in every summer semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The goal is to relay theoretical fundamentals about Power Transformers and its applications.

Main topics are the physical fundamentals and their application in transformer precalculation and design. Based on that the different variations in design and the various applications are discussed. Finally future trends and research and development activities in the field of power transformers are presented.

Content

The lecture is divided into the following clauses

- Applications and design variations of power transformers
- Components and design of power transformers
- Working principle of power transformers and shunt reactors. Induction law and its application for the precalculation of transformers. The magnetic field in iron core, core designs, variations and air gaps in magnetic circuits. Magnetic materials and their properties, application in transformers and shunt reactors. Main and stray flux in transformers and calculation of the equivalent circuit. Stresses inside transformers during inrush and short circuits.
- Winding connections and vector groups of transformers, three phase power system, connected voltages and line to earth voltage, description of three phase systems, parallel connection of transformers.
- Precalculation of transformers.
- Losses in transformers and its origins in core and in the windings. Possible measures to influence loss generation. Cooling systems and its applications.
- High voltage DC transformers
- Factory testing of transformers. Performance of type tests, standard test and special tests.
- Overload capability of transformer. Controlled overloading and emergency overload.
- Service and monitoring.
- Future trends and research and development activities.

Media

The material is distributed during any lecture

Remarks

The course consists of seven lecture blocks and one factory visit. Date and time is announced on the blackboards.

Course: Automation of Power Grids**Course key: [23396]****Lecturers:** Eichler**Credit points (CP):** 3 **Hours per week:** 2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Electrical Power Engineering [TVWL3INGETIT1] (S. 63)**Learning Control / Examinations**

The assessment consists of an oral exam (20 min) taking place at the beginning of the recess period (according to Section 4 (2), 2 of the examination regulation). The exam takes place in every summer semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

Basic knowledge of power transmission and distribution; basic knowledge of IT

Conditions

None.

Learning Outcomes

Understand methods, equipment, standards, current and future technology, state-of-the-art and trends of power systems control from a global (i.e. worldwide) perspective

Digital design fundamental lecture. Focus of the lecture are formal, methodical and mathematic fundamentals for the design of digital systems. Based on these, technical implementation of digital systems is elaborated, especially the design of standard digital building blocks and more complex systems based on these.

Content

This lecture presents an introduction to the important theoretical fundamentals of digital system design, which is scheduled for the students in the first semester of Electrical Engineering. Since the lecture can not be based on student's knowledge of circuit technology, it focuses on abstract models for behaviours and structures. In addition the lecture will also relay the fundamentals, which are needed in other lectures.

At first the lecture delves into important conceptual information and shows that digital system design represents a special technical solution for the treatment of information. After this the concept of a system will be introduced and illustrated that complex systems require a hierarchical partitioning in order to be able to understand and design them. Based on this it can be concluded then that system design can be understood as a repeated transformation from descriptions of behaviour to descriptions of structure.

The terms message and signal are subject matter of a further chapter. Starting from time and amplitude continuous signals, simple time and value discrete binary signal representations will be introduced, as well as more complex signal forms derived from binary signals.

The representation of information by signals presupposes or implies an "agreement of allocation" between distinguishable elements of information representation and signal representation, the so-called codes. Therefore the lecture delivers the fundamental concepts of codes & coding and describes a few important classes & types of codes, which serve some of the following uses: analog/digital conversion for interfaces, error detection & error correction for numerical purposes, and optimal representation of information and/or signals. Code conversion and related topics finalize the consideration of this topic.

Formal and mathematical fundamentals will be treated in an extensive chapter. To begin the subject matter of the lecture is comprised of sets and quantities, the operations on these quantities, as well as the relations between set elements.

Afterwards several fundamentals of graph theory are introduced. It will be shown that logic algebra can serve as a basis for special Boolean algebra. Building upon the associated rules the concept of switching functions, their graphical representation and classification, the standard theories, and important basis systems for the representation of Boolean expressions will be derived and considered. Expansion theory, the computation with allocation blocks and terms, as well as measures for minimization are further topics of this chapter.

Having the formal basics available, applicable technical components and structures will be developed on the basis of binary switches, which allow for a direct conversion of formal relationships into solutions. Gates, circuit networks, synchronized sequential circuits, as well as specially derived functional units such as counters, registers, and digital memories lead to complex structures. The "All-purpose Computer" from J. von Neumann will be particularly dealt with.

To accompany the lecture material, assignments and the corresponding solutions will be given out and discussed during lecture hall exercises. Furthermore tutorials in small study groups will be held to deepen the understanding of the curriculum and methods taught. Furthermore computer exercises are offered in which digital circuits and their pattern of behaviour will be modelled and simulated with the help of the program LogicWorks.

Assessment will consist of written exams following §4, Abs. 2, 3 of the examination regulation.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Based on the lectures on civil law, the students are provided with an overview of the specifics of commercial transactions, commercial agency and the law of merchants. Moreover, the forms of organization available in German company law are outlined.

Content

The lecture begins with an introduction into the different terms of merchants of the German Commercial Code. Subsequently, the rules governing trade names, commercial registries and commercial agency are dealt with. This is followed by a presentation of the general rules of commercial transactions and of the specific commercial transactions. In company law, first of all, the basics of partnerships are explained. Thereafter, the focus will be on corporate law which is most important in practice.

Learning Outcomes

Increasing significance of information technology for data processing and interconnectedness of the society by means of telecommunication does not only enhance the social and economical relevance of data in general, it raises the question about legal rules for the protection of personalised data as well. The problem for those who are responsible for the application of law is that national rules in this area are in constant flux due to technological progress and Europeanisation of law. Additionally there is a vast number of sector-specific regulation (such as labour law). Bearing all this in mind, the lecture's main focus is the presentation of the basic principles of the German Federal Act on Data Protection (Bundesdatenschutzgesetz). In doing so, new concepts of data protection like self-data protection or system data protection will be analysed. A further focal point is the examination of evolution of sector-specific data protection law, considering as example regulation of data protection in connection with teleservice or mediaservice. Students should learn how to negotiate their ways in the interaction of different levels of legal norms and solve simple problems of data protection law.

Content

After illustrating contents and history of data protection law there will be presented backgrounds with respect to Community law and under constitutional law. Further on, the German Federal Act on Data Protection will be focussed. At this will be set forth basic principles of regulation (such as necessity), personalised data as an object of regulation, rights of those who are affected as well as the legitimacy of different procedures of data processing. Organisational regulations, particularly data security official will be approached as well. Further on, in a case study current concepts of data protection and the problem of video surveillance will be discussed. Finally, there are three units on sector-specific regulation of telecommunication and teleservice / mediaservice.

Conditions

None.

Learning Outcomes

As the traditional media (print, radio, TV) the "new media" (online-services and the Internet) is governed by public law, yet with a different extent of regulation and with apparent effects on private law. The main influences for the media law are constitutional law and European community law. The lectures aims at providing an overview of the common grounds and differences of the current media law regime and of the conceivable perspectives of media convergence. Current developments in politics and economics, which are relevant for public media law, will be used as examples in the lecture. Besides, it is planned to attend a court hearing of the Federal Constitutional Court (Bundesverfassungsgericht) and/or the Federal Court (Bundesgerichtshof).

Content

Initially, the lecture will deal with the constitutional basis of the media law regime. i.e. the responsibilities of the Federal and the State legislatures, freedom of speech, freedom of information, constitutional media rights (Art. 5 para. 1 Constitutional Law) and its limitations by general laws, the ban on censorship and the counterstatement law. In addition, the European community principles on broadcasting and media law will be part of the lecture. Next will be an overview of the individual media laws, namely the broadcasting law (especially Rundfunkstaatsvertrag) the press law of the States and the statute on the so-called "telemedia" services. Finally, the protection of minors in the media will be dealt with (Act on Protection of Minors and Treaty on the Protection of Minors in the Media).

Basic literature

To understand the legal framework it is necessary for the students to have the relevant statutes, for example "Telemediarecht, Telekommunikations- und Multimediarecht", beck-Texte im dtv, 7. Auflage 2007.

As an introduction it is recommended to read: Frank Fechner, Medienrecht, Verlag Mohr Siebeck, Verlag Mohr Siebeck, 8. Auflage 2007.

Written exam 100% (§4, Abs. 2, 1 of the SPO).

Prerequisites

None.

Conditions

none

Learning Outcomes

It is the aim of this course to provide students with knowledge in the area of copyright that builds upon, and goes beyond the knowledge the students have already acquired in the general lecture of "Industrial and intellectual property law". Students shall understand how the legal rules depend upon, and interact with, the economic background, legislative policy and information and communication technologies. Students shall learn about the rules of national, European and international copyright law and to apply these legal rules in practical cases.

Content

The course deals with the subject matter of copyright, the rights of authors, licensing, limitations and exceptions to copyright, term of protection, neighbouring rights, enforcement and collective administration of rights. The course does not merely focus on German copyright law, but likewise puts European and international copyright law into perspective. Students shall understand how the legal rules depend upon, and interact with, the economic background, legislative policy and information and communication technologies. Students shall learn about the rules of national, European and international copyright law and to apply these legal rules in practical cases.

Remarks

It is possible that this course will be taught in the summer instead of the winter semester.

Course: Environmental Law**Course key: [24140]****Lecturers:** Indra Spiecker genannt Döhmann**Credit points (CP):** 4 **Hours per week:** 2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Public Business Law [TVWL3JURA6] (S. [73](#))**Learning Control / Examinations**

The assessment consists of an 1h written exam following §4, Abs. 2, 1 of the SPO.

The assessment will be offered in every winter term and can be repeated at every regular examination date.

Prerequisites

None.

Knowledge of Law, esp. Public Law I or II are recommended.

Conditions

None.

Learning Outcomes

Environmental law is a field of law that influences management in many regards. Students shall develop a feeling for the many different aspects of environmental law and its instruments. Aside from so-called "classical" approaches such as law-and-order students will learn about other, economic influenced, instruments such as the gathering and the transfer of information or the market for certificates. On this basis, the course will center around immissions and waste management law. Additionally, water law, protection of soil law and nature protection law will be covered. Students shall be enabled to deal with easy cases in regard to environmental law.

Content

The lecture begins with an introduction into the special problems faced by environmental law. Different instruments, according to common goods theory, will be presented. In the main part of the lecture, immissions law, waste management law, water law, protection of soil law and nature protection law will be analyzed.

Media

Course: Employment Law I**Course key: [24167]****Lecturers:** Alexander Hoff**Credit points (CP):** 3 **Hours per week:** 2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Private Business Law [TVWL3JURA5] (S. [72](#))**Learning Control / Examinations**

The assessment consists of a written exam following §4, Abs. 2, 1 of the SPO.

Prerequisites

None.

Conditions

None.

Learning Outcomes

It is the aim of this lecture to provide a solid insight into individual-related labour law. The students will understand the importance of labour law as an integral part of social market economy. They will be able to review contractual provisions in employment contracts and to evaluate labour law conflicts.

Content

Students will be introduced to all labour law regulations concerning the beginning, enforcement and termination of an employment. The lecture provides an introduction into procedural matters. A labour court's trial will be attended.

Basic literature

tba at the beginning of the course.

Course: Tax Law I**Course key: [24168]****Lecturers:** Detlef Dietrich**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Private Business Law [TVWL3JURA5] (S. [72](#))**Learning Control / Examinations**

The assessment consists of a written exam following §4, Abs. 2, 1 of the SPO.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The target of the lecture is an introduction to national business tax law. The legal norms, spread on several individual tax laws, which are decisive for the taxation of the companies and their owners, will be treated. The focus is on basic fiscal knowledge realizable in practice as a component of modern business economics.

Content

Except for a basic knowledge of the existing German company types and the annual financial statements (balance sheet, statement of earnings), no fiscal previous knowledge is required. The lecture intends to give a current global overview about the most important elements of law. The focus is on trade or business companies in the most common forms such like sole traders, partnerships and corporations.

Course: Advanced Civil Law**Course key: [24504]****Lecturers:** Thomas Dreier, Peter Sester**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Sommersemester **Level:** 1**Teaching language:** Deutsch**Part of the modules:** Commercial Law [TVWL3JURA2] (S. 70)**Learning Control / Examinations**

Assessment will consist of written exams within *Privatrechtliche Übung* following §4, Abs. 2, 3 of the examination regulation.

Prerequisites

The course *Civil law for beginners* [24012] is required.

Conditions

None.

Learning Outcomes

Following what the students have learned in the course *Civil law for beginners* about the basic notions of law and, in particular, the general part of the German Civil Code (Bürgerliches Gesetzbuch, BGB), in this course the students shall acquire knowledge of contract and of property law. They will learn about the statutory regulation of place, time and modalities of the performance of contractual duties, as well as the statutory rules governing defaults of performing contractual promises (impossibility of performance; non-performance; delayed performance, defective performance). In addition the students will be presented with the different types of contracts and with both liability for fault and strict liability. As far as property law is concerned, the students shall understand the different types of transfer of ownership and of securities the German Civil Code provides for.

Content

Following what the students have learned in the course *Civil law for beginners* about the basic notions of law and, in particular, the general part of the German Civil Code (Bürgerliches Gesetzbuch, BGB), in this course the students shall acquire knowledge of contract and of property law. On the one hand, this includes the statutory rules on place, time and modalities of performance, and the statutory rules governing defaults of performing contractual promises (impossibility of performance; non-performance; delayed performance, defective performance). On the other hand, the statutory types of contracts will be discussed (in particular, sale, lease, contract for work and contract for services, lending and borrowing) as well as new types of combined contracts (e.g., leasing, factoring, computer contracts). Moreover, legal liability will be discussed both with regard to liability for fault and with regard to strict liability. As regards property law, possession and ownership will be discussed as well as the different forms of transfer of ownership and the most important of the security rights.

Course: Computer Contract Law**Course key: [24583]****Lecturers:** Michael Bartsch**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Intellectual Property Law [TVWL3JURA4] (S. [71](#))**Learning Control / Examinations**

The assessment consists of a written exam following §4, Abs. 2, 1 of the SPO.

Prerequisites

None.

Conditions

None.

Learning Outcomes

It is the aim of this course to provide students with knowledge in the area of contract formation and formulation in practice that builds upon the knowledge the students have already acquired concerning the legal protection of computer programs. Students shall understand how the legal rules depend upon, and interact with, the economic background and the technical features of the subject. The contract drafts shall be prepared by the students and will be corporately completed during the lecture. It is the aim of the course that students will be able to formulate contracts by themselves.

Content

The course deals with contracts from the following areas:

- Contracts of programming, licencing and maintaining software
- Contracts in the field of IT employment law
- IT projects and IT Outsourcing
- Internet Contracts

From these areas single contracts will be chosen and discussed (e.g. software maintenance, employment contract with a software engineer). Concerning the respective contract the technical features, the economic background and the subsumption in the national law of obligation (BGB-Schuldrecht) will be discussed. As a result different contractual clauses will be developed by the students. Afterwards typical contracts and conditions will be analysed with regard to their legitimacy as standard business terms (AGB). It is the aim to show the effects of the german law of standard business terms (AGB-Recht) and to point out that contracts are a means of drafting business concepts and market appearance.

Course: Telecommunications Law**Course key: [24632]****Lecturers:** Indra Spiecker genannt Döhmann**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Public Business Law [TVWL3JURA6] (S. [73](#))**Learning Control / Examinations**

The assessment consists of an written exam (following §4(2), 1 SPO).

Prerequisites

None.

Conditions

None.

Learning Outcomes

Telecommunications is the technical basis of the Information Engineering and Management. In which way for example UMTS is regulated, is of relevant importance for the supply of services in the world of the mobile contents services. The central defaults of the telecommunications regulation are in the telecommunications law (TKG). This was completely amended due to community-legal defaults 2004. The lecture procures for apprehending the basics of legal framework of the information society the essential knowledge in telecommunication law.

Content

The lecture offers an overview of the new TKG. The whole range of the regulation is treated: Of the material-legal instruments of the competition-creative economic regulation (market -, entrance -, payment regulation as well as special supervision of abuse) and the non-economic regulation (customer protection; Broadcasting; Assignment of frequencies, numbers and rights of way; secrecy of telecommunications; Data security and public security) up to the institutional arrangement of the regulation. To assist in the understanding the technical and economic bases are clarified as well as community and constitutional default sat at the beginning of the lecture.

Media

Content structure

Basic literature

Since the law material is to be partly compiled in the discourse with the studying, a current version of the TKG is to be bring along to the lecture.

Further literature will be announced in the lecture.

Course: Tax Law II**Course key: [24646]****Lecturers:** Detlef Dietrich**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Private Business Law [TVWL3JURA5] (S. [72](#))**Learning Control / Examinations**

The assessment consists of a written exam following §4, Abs. 2, 1 of the SPO.

Prerequisites

None.

Conditions

None.

Learning Outcomes

It is the target of the lecture to provide extended knowledge in business administration related theory of taxation in the field of economics and law, based on the general lecture "introduction to corporate tax law". The students obtain the basis for an economic examination of the fiscal prescriptions and are able to assess the impact on business decisions. The emphasis is on such tax law regulations which allow possibilities for action and decision to the taxpayer.

Content

The lecture requires basic knowledge of commercial law and company law as well as of earnings tax law. Basic and current questions of German corporate taxation are systematically prepared in topic blocs; foils, leaflets and supplementary references are distributed in the individual sessions. There is room for discussion. A recent text collection of the tax laws will be necessary.

[73](#))**Learning Control / Examinations**

The assessment consists of a written exam (following §4(2), 1 SPO).

Prerequisites

None.

Conditions

None.

Learning Outcomes

Due to the Europeanization of national law, the examination of European law is indispensable for everyone aiming to gain basic legal knowledge. Hardly any national activity can be imagined without the consideration of presetting of European Community law. By comparison, the influence of international law is of small importance. In light of this, the lecture predominantly deals with European law and imparts the knowledge of the EU law necessary for the students in order to comprehend how the national law is being covered by European Community law defaults. Afterwards, the student should be able to solve questions regarding European legislation in a problem-oriented manner. As the subject matter partly will be acquired in discourse with the students, it is necessary to acquire a corpus juris (e.g. Beck-Texte "Europarecht").

Content

The lecture predominantly deals with the European law: in the origin, this contains an analysis of history from the EEC to EC and EU, of participants (parliament, commission, council, European Court of Justice), of sources of law (regulations, directives, final judgements, opinions, recommendations) and legislative procedure. Further, the lecture focuses on the basic liberties of the EC, which enable a free flow of goods (for example of beer not matching the German purity law), persons (like the professional footballer Bosman), services (like entrepreneurial activities) and capital. In addition, the charter of fundamental rights of the EC and the rules of competition will be discussed, in each case in the light of a concrete legal case. Moreover, the fundamental rights of the European Convention on Human Rights (ECHR) are being introduced. Concluding, a short survey of international law, especially of the World Trade Organization (WTO), will be given.

Remarks

It is possible that this course will be taught in the summer instead of the winter semester.

Course: Applied Informatics II - IT Systems for e-Commerce**Course key: [25033]****Lecturers:** Stefan Tai**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 2**Teaching language:** Deutsch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. [51](#)), Electives in Informatic [TVWL3INFO2] (S. [52](#))**Learning Control / Examinations**

The assessment consists of a written examination (60 min) according to Section 4 (2),1 of the examination regulation. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

Knowledge of content of the courses *Foundations of Informatics I* [25074] and *Foundations of Informatics II* [25076] is expected.

Conditions

None.

Learning Outcomes

The student learns about IT methods and systems in support of modern electronic commerce. The student should be able to select, assess, design, and apply these methods and systems in a context-sensitive manner.

Content

The course introduces methods and systems in support of electronic commerce, including the topics:

- application architectures (incl. client server architectures)
- document description and exchange (incl. XML)
- enterprise middleware (incl. CORBA, Messaging Middleware, Java Enterprise Edition)
- Web services and SOA

Course: Private and Social Insurance**Course key: [25050]****Lecturers:** Wolf-Rüdiger Heilmann, Besserer**Credit points (CP):** 2.5 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Insurance Markets and Management [TVWL3BWLFBV4] (S. [44](#))**Learning Control / Examinations**

The assessment consists of a written exam (according to Section 4 (2), 1 of the examination regulation) .

The exam takes place at every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Getting to know basic terms and functioning of private and social insurance.

Content

Basic terms of insurance, i.e. characteristics, judicial and political background and functioning of private and social insurance as well as their economic and societal and political meaning.

Complementary literature

- F. Büchner, G. Winter. Grundriss der Individualversicherung. 1995.
- P. Koch. Versicherungswirtschaft. 2005.
- Jahrbücher des GDV. Die deutsche Versicherungswirtschaft.

Remarks

Block course. To attend the course please register at the secretariat of the chair of insurance science.

Course: Principles of Insurance Management**Course key: [25055]****Lecturers:** Ute Werner**Credit points (CP):** 4.5 **Hours per week:** 3/0**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Risk and Insurance Management [TVWL3BWLFBV3] (S. 43), Insurance Markets and Management [TVWL3BWLFBV4] (S. 44)**Learning Control / Examinations**

The assessment consists of an oral presentations (incl. elaboration) within the lecture (according to Section 4 (2), 3 of the examination regulation) and an oral exam at the end of the semester (according to Section 4 (2), 2 of the examination regulation). The overall grade consists of the valuation of the oral presentation incl. elaboration (50 percent) and the valuation of the oral exam (50 percent).

Course: Applied Informatics I - Modelling**Course key: [25070]****Lecturers:** Andreas Oberweis, Rudi Studer, Sudhir Agarwal**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 2**Teaching language:** Deutsch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. 51), Electives in Informatic [TVWL3INFO2] (S. 52)**Learning Control / Examinations**

The assessment consists of a written examination (60 min) in the first week after lecture period (according to Section 4 (2), 1 of the examination regulation).

Prerequisites

None.

Conditions

None.

Learning Outcomes

Basic knowledge about the strengths and weaknesses of various modeling approaches including their application areas.

Content

In the context of complex information systems, modelling is of central importance, e.g. – in the context of systems to be developed – for a better understanding of their functionality or in the context of existing systems for supporting maintenance and further development.

Modelling, in particular modelling of information systems, forms the core part of this lecture. The lecture is organized in two parts. The first part mainly covers the modelling of static aspects, the second part covers the modelling of dynamic aspects of information systems.

The lecture sets out with a definition of modelling and the advantages of modelling. After that, advanced aspects of UML, the Entity Relationship model (ER model) and description logics as a means of modelling static aspects will be explained. This will be complemented by the relational data model and the systematic design of databases based on ER models. For modelling dynamic aspects, different types of petri-nets as well as event driven process chains together with their respective analysis techniques will be introduced.

Course: Nonlinear Optimization I

Course key: [25111]

Lecturers: Oliver Stein

Credit points (CP): 4.5 **Hours per week:** 2/1

Term: Sommersemester **Level:** 4

Teaching language: Deutsch

Part of the modules: Methodical Foundations of OR [TVWL3OR6] (S. 54), Stochastic Methods and Simulation [TVWL3OR7] (S. 55)

Learning Control / Examinations

The assessment consists of a written exam (60 minutes) according to Section 4(2), 1 of the examination regulation.

The exam takes place in the semester of the lecture and in the following semester.

The examination can also be combined with the examination of *Nonlinear Optimization II* [25113]. In this case, the duration of the written examination takes 120 minutes.

In a combined examination of *Nonlinear Optimization I* [25111] and *Nonlinear Optimization II* [25113], upon attaining more than 50% of the exercise points, the grade of the passed examination is improved by a third of a grading step.

In a combined examination of *Nonlinear Optimization I* [25111] and *Nonlinear Optimization II* [25113], upon attaining more than 50% of the computer exercise points, the grade of the passed examination is improved by a third of a grading step.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student

- knows and understands fundamentals of nonlinear optimization,
- is able to choose, design and apply modern techniques of nonlinear optimization in practice.

Content

The lecture treats the minimization of smooth nonlinear functions under nonlinear constraints. For such problems, which occur very often in economics, engineering, and natural sciences, we derive optimality conditions that form the basis for numerical solution methods. The lecture is structured as follows:

- Introduction, examples, and terminology
- Existence results for optimal points
- First and second order optimality conditions for unconstrained problems
- Optimality conditions for unconstrained convex problems
- Numerical methods for unconstrained problems (line search, steepest descent method, variable metric methods, Newton method, Quasi Newton methods, CG method, trust region method)

Constrained problems are the contents of part II of the lecture.

The lecture is accompanied by computer exercises in which you can learn the programming language MATLAB and implement and test some of the methods for practically relevant examples.

Complementary literature

Remarks

Part I and II of the lecture are held consecutively in the *same* semester.

Course: Seminar in Continuous Optimization**Course key: [25131]****Lecturers:** Oliver Stein**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

The assessment is composed of a 15-20 page paper as well as a 40-60 minute oral presentation according to §4(2), 3 of the examination regulation.

The total grade is composed of the equally weighted grades of the written and oral assessments.

The seminar is appropriate for bachelor as well as for master students. Their differentiation results from different assessment criteria for the seminar paper and the seminar presentation.

Prerequisites

See corresponding module information.

Conditions

Attendance is compulsory.

Preferably at least one module offered by the institute should have been chosen before attending this seminar.

Learning Outcomes

The seminar aims at describing, evaluating, and discussing recent as well as classical topics in continuous optimization. The focus is on the treatment of optimization models and algorithms, also with respect to their practical application.

The student is introduced to the style of scientific work. By focussed treatment of a scientific topic the student learns the basics of scientific investigation and reasoning.

For further development of a scientific work style, master students are particularly expected to critically question the seminar topics.

With regard to the oral presentations the students become acquainted with presentation techniques and basics of scientific reasoning. Also rethoric abilities may be improved.

Content

The current seminar topics are announced under <http://kop.ior.kit.edu> at the end of the preceding semester.

Basic literature

References and relevant sources are announced at the beginning of the seminar.

Course: Global Optimization I**Course key: [25134]****Lecturers:** Oliver Stein**Credit points (CP):** 4.5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Applications of Operations Research [TVWL3OR5] (S. 53), Methodical Foundations of OR [TVWL3OR6] (S. 54)**Learning Control / Examinations**

The assessment of the lecture is a written examination (60 minutes) according to §4(2), 1 of the examination regulation.

The examination is held in the semester of the lecture and in the following semester.

The examination can also be combined with the examination of *Global Optimization II* [25136]. In this case, the duration of the written examination takes 120 minutes.

In a combined examination of *Global Optimization I* [25134] and *Global Optimization II* [25136], upon attaining more than 50% of the exercise points, the grade of the passed examination is improved by a third of a grading step.

In a combined examination of *Global Optimization I* [25134] and *Global Optimization II* [25136], upon attaining more than 50% of the computer exercise points, the grade of the passed examination is improved by a third of a grading step.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student

- knows and understands the fundamentals of deterministic global optimization,
- is able to choose, design and apply modern techniques of deterministic global optimization in practice.

Content

In many optimization problems from economics, engineering and natural sciences, numerical solution methods are only able to efficiently identify *local* optimizers, while it is much harder to find *globally* optimal points. This corresponds to the fact that by local search it is easy to find the summit of the closest mountain, but that the search for the summit of Mount Everest is rather elaborate.

Part I of the lecture treats methods for global optimization of convex functions under convex constraints. It is structured as follows:

- Introduction, examples, and terminology
- Existence results
- Optimality in convex optimization
- Duality, bounds, and constraint qualifications
- Numerical methods

Nonconvex optimization problems are treated in part II of the lecture.

The lecture is accompanied by computer exercises in which you can learn the programming language MATLAB and implement and test some of the methods for practically relevant examples.

Course: Marketing and Consumer Behavior**Course key: [25150]****Lecturers:** Wolfgang Gaul**Credit points (CP):** 4.5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Foundations of Marketing [TVWL3BWL MAR] (S. [47](#))**Learning Control / Examinations**

See module description.

Prerequisites

See corresponding module description.

Conditions

See corresponding module description.

Learning Outcomes**Content**

Starting from the S-O-R paradigm where S stands for “stimuli”, O for “organism”, and R for “reactions”, aspects of consumer behavior are explained and possibilities are provided how marketing activities can be used to create desired influences. S-R models describe how consumer reactions depend on stimuli. Cognitive processes and psychical states help to explain how the (unobservable) interior of the organism contributes to the interpretation of reactions. In this context the adequate combination of available marketing instruments (price, product, promotion, place) will be discussed.

(See description of the module)

Content

The students should learn the essential scientific and practical principles of Marketing, especially branding. Branding consists of any name, design, style, words or symbols, singly or in any combination that distinguish one product from another in the eyes of the consumer. Brand positioning, brand loyalty and brand equity are discussed as important elements of a management concept. The focus of the course is not limited to short-term ROI, but also long-term benefits of communication strategies facing company's responsibilities to all of its stakeholders, e.g. consumers, investors and public. The strategies and techniques in branding are broadened by several case studies. English as an international technical language in marketing is practiced with course readings and scientific papers. Content:

The course brand management starts with the development of the corporate objectives as the heart of the brand planning process followed by definitions of brand. Setting up on the psychological and social bases of consumer behavior, aspects of an integrated marketing communication are discussed. The students should acquire the particular value of branding strategies. The concept of brand personality is considered in two perspectives, from a practical point of view and the challenging position of the theoretical construct. Methods for the measurement of a consumer-based brand equity are compared with the financial valuation of the brand. The information provided by this equity measurements are related to the equity drivers in brand management. The marketers perspective will be accomplished with the analysis of several case studies. Within the limits of a knowledge based system for advertising evaluation many of the issues accomplished in the course are summarized. At the same time it is discussed as a tool to use marketing knowledge systematically.

The assessment consists of a written exam (60 min) taking place in the recess period (according to §4 (2), 1 of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

This course aims at providing students with the understanding of the purposes of alternative costing systems as well as the use of relevant information for decision making. The course will also examine techniques for the purpose of cost management and accounting for control.

Content

- Design of Cost Systems
- Cost Classifications, Cost Behavior, and Principles of Cost Allocation
- Activity-based Costing
- Product Costing
- Production Decisions
- Cost-based Pricing
- Cost Management
- Decisions under Risk
- Cost Accounting for Control

The assessment consists of a written exam (60 min.) according to Section 4 (2), 1 of the examination regulation.

The exam takes place at every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Students get an comprehensive insight into financing, capital investments of firms and the essentials of valuation.

Content

Analytical methods and theories in the field "Capital investments and financing" with the main focus on:

- Capital Structure
- Dividend policy
- Essentials of valuation
- Investment decisions
- Short term/ long term finance
- Working Capital Management

Complementary literature

- Ross, Westerfield, Jaffe, Jordan (2008): Modern Financial Management, McGraw-Hill International Edition

[45](#)), Topics in Finance II [TVWL3BWLFBV6] (S. [46](#))**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes

Students are introduced to the theoretical fundamentals of financial intermediation.

Content

- Arguments for the existence of financial intermediaries
- Bank loan analysis, relationship lending
- Competition in the banking sector
- Stability of the financial system
- The macroeconomic role of financial intermediation

Complementary literature

- Hartmann-Wendels/Pfingsten/Weber (2006): Bankbetriebslehre, 4. Auflage, Springer Verlag.

Course: Seminar in Finance**Course key: [25293]****Lecturers:** Marliese Uhrig-Homburg, Martin E. Ruckes**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes

The student gets in touch with scientific work. Through profound working on a specific scientific topic the student is meant to learn the foundations of scientific research and reasoning in particular in finance.

Through the presentations in this seminar the student becomes familiar with the fundamental techniques for presentations and foundations of scientific reasoning. In addition, the student earns rhetorical skills.

Content

Within this seminar different topics of current concern are treated. These topics have their foundations in the contents of certain lectures.

The topics of the seminar are published on the website of the involved finance chairs at the end of the foregoing semester.

Basic literature

Will be announced at the end of the foregoing semester.

Course: Exchanges**Course key: [25296]****Lecturers:** Jörg Franke**Credit points (CP):** 1.5 **Hours per week:** 1**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** eFinance [TVWL3BWLISM3] (S. 38), Topics in Finance I [TVWL3BWLFBV5] (S. 45), Topics in Finance II [TVWL3BWLFBV6] (S. 46)**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes

Students learn about current developments regarding organisation of exchanges and securities trading.

Content

- Organisation of exchanges: Changing Zeitgeist - Corporates instead of cooperative structures
- Market models: order driven vs. market maker - Liquidity provision for less frequently traded securities
- Trading systems: The end of an era? - No more need for running traders?
- Clearing: Diversity instead of uniformity - Safety for all?
- Settlement: Increasing importance - Does efficient settlement assure the “value added” of exchanges in the long run?

Complementary literature

Educational material will be offered within the lecture.

Course: Business Strategies of Banks**Course key: [25299]****Lecturers:** Wolfgang Müller**Credit points (CP):** 3 **Hours per week:** 2**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Topics in Finance I [TVWL3BWLFBV5] (S. 45), Topics in Finance II [TVWL3BWLFBV6] (S. 46)**Learning Control / Examinations****Prerequisites**

Learning Outcomes

Students are told the basics of commercial banking.

Content

The management of a bank is in charge of the determination and implementation of business policy - taking into account all relevant endogenous and exogenous factors - that assures the bank's success in the long run. In this context, there exists a large body of banking models and theories which are helpful in describing the success and risk of a bank. This course is meant to be the bridging of banking theory and practical implementation. In the course of the lectures students will learn to take on the bank management's perspective.

The first chapter deals with the development of the banking sector. Making use of appropriate assumptions, a banking policy is developed in the second chapter. The design of bank services (ch. 3) and the adequate marketing plan (ch. 4) are then built on this framework. The operational business of banks must be guided by appropriate risk and earnings management (ch. 5 and 6), which are part of the overall (global) bank management (ch. 7). Chapter eight, at last, deals with the requirements and demands of bank supervision as they have significant impact on a bank's corporate policy.

Course: Statistics and Econometrics in Business and Economics**Course key: [25325]****Lecturers:** Wolf-Dieter Heller**Credit points (CP):** 4.5 **Hours per week:** 2/2**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Econometrics and Economics [TVWL3VWL7] (S. 33), Statistical Applications of Financial Risk Management [TVWL3STAT] (S. 56)**Learning Control / Examinations****Prerequisites**

Basic knowledge in statistics is required.

Conditions

None

Learning Outcomes

statistically accurate use of financial market data, particularly time series analysis

Evaluation of various time series models and their applicability

Content

In Part 1 we will provide a thorough description of the quantitative part of investment theory paying attention to the mathematical, probabilistic and statistical methods now widely used in financial practice.

In Part 2 we shall study the methods of construction, identification and verification of the time-series models, which are among most powerful instruments of the financial econometrics. The emphasis will be on the financial and economic indicators forecasting the financial time-series.

Course: Economics of Uncertainty**Course key: [25365]****Lecturers:** Karl-Martin Ehrhart**Credit points (CP):** 4.5 **Hours per week:** 2/2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Strategic Games [TVWL3VWL4] (S. 28), Econometrics and Economics [TVWL3VWL7] (S. 33)**Learning Control / Examinations**

Written exam, possible further requirements.

Prerequisites

See corresponding module information.

Conditions

Knowledge in mathematics and statistics is required.

Learning Outcomes

The student will be made familiar with the basics in modern decision making under uncertainty so that she will be able to analyze concrete decision problems and to develop simple solution procedures. By being confronted with experimental results in decision making the student should also be able to evaluate the behavioral part of decision making.

Content

In the first part of the course we deal with problems of decision making under uncertainty and introduce models like expected utility theory, stochastic dominance, risk aversion, and prospect theory. We also consider the empirical validity of the different approaches.

In the second part the concepts learned in the first part are applied for example to search models and Bayesian games.

Media

overhead slides, possibly additional printed material.

The assessment consists of a written exam according to Section 4(2), 1 of the examination regulation. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

See corresponding module information.

Basic knowledge of mathematics and statistics is assumed.

Conditions

None.

Learning Outcomes

This course teaches advanced knowledge in strategic decision theory. Latest developments in game theory are discussed. The student learns to judge complex strategic problems and to offer adequate solutions.

Content

This lecture aims at amplifying the students' knowledge in game theory. Main topics are further concepts of non-cooperative game theory, cooperative game theory, evolutionary game theory and bargaining theory.

Media

Course: Industrial Organization**Course key: [25371]****Lecturers:** Siegfried Berninghaus**Credit points (CP):** 4.5 **Hours per week:** 2/2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Applied Game Theory [TVWL3VWL1] (S. [27](#))**Learning Control / Examinations**

The assessment consists of a written exam (80 min) according to Section 4(2), 1 of the examination regulation.

The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

See corresponding module information.

Conditions

None.

Learning Outcomes

The students will learn to understand the negative effects of imperfect competition and possible political implications thereof. In every chapter of the course game theoretic models will be introduced with the objective to reveal how the theory of industrial organization can explain real world economic phenomena. The theoretical analysis of economic interrelations will be supplemented by class room experiments and if possible by presentations from business experts.

Content

In the first part of the course different market structures like monopoly, oligopoly and perfect competition will be introduced and compared with each other. In the main part advanced concepts on topics like price discrimination, product differentiation, collusive behavior, as well as different theoretical models on market entry and R&D will be presented.

Course: Experimental Economics**Course key: [25373]****Lecturers:** Siegfried Berninghaus, Kroll**Credit points (CP):** 4,5 **Hours per week:** 2/2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Applied Game Theory [TVWL3VWL1] (S. 27)**Learning Control / Examinations**

The assessment consists of an 80 min written exam. The lecturer may offer the opportunity to reach up to 10 points by writing a seminar thesis and a presentation to an individually announced topic.

Prerequisites

See corresponding module information.

Conditions

None.

Learning Outcomes

The students should learn

- how to gain scientific experience and knowledge (philosophy of science),
- how Game Theory and Experimental Economics influenced each other in scientific research,
- about the methods as well as the strengths and weaknesses of Experimental Economics,
- some examples of experimental research, such as markets and market equilibria, coordination games, bargaining, decision making under risk,
- how to evaluate data.

Content

Experimental Economics have become a separate field in Economics. Nearly all fields of the economic discipline use economic experiments to verify theoretical results. Besides being used for empirical validation, this method is applied in political and strategic consulting. The lecture gives an introduction to experimental methods in economics and shows differences to experiments in natural sciences. Scientific studies are used to show exemplary applications.

Media

Classroom experiments or experiments in the computer laboratory will be conducted. To some extent, slides are made available online.

Course: Advanced Econometrics of Financial Markets**Course key: [25381]****Lecturers:** Svetlozar Rachev**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 4**Teaching language:** Englisch**Part of the modules:** Econometrics and Economics [TVWL3VWL7] (S. [33](#))**Learning Control / Examinations**

The assessment of this course consists of a written examination (following §4(2), 1 SPO) and of possible additional assignments during the course (following §4(2), 3 SPO).

Prerequisites

None.

Conditions

None.

Learning Outcomes

After successful completion of the course students will have attained both knowledge and competency to comprehend the theories behind portfolio management of major financial institutions. Hence students can adapt this understanding to the more specialised needs of the intermediary.

Content

Advanced Econometrics of Financial Markets covers: Forecasting stock return, market microstructure(non-synchronised trading, spread and modelling transactions), "event studies analysis", capital asset pricing model, multi-factor price models, intertemporal equilibrium models.

Media

transparencies, exercises.

Basic literature

Campbell, Lo, McKinlay: The Econometrics of Financial Markets. Princeton University Press.

Course: Facility Location and Strategic Supply Chain Management Course key: [25486]

Lecturers: Stefan Nickel

Credit points (CP): 4.5 **Hours per week:** 2/1

Term: Sommersemester **Level:** 4

Teaching language: Deutsch

Part of the modules: Supply Chain Management [TVWL3BWLISM2] (S. 37), Applications of Operations Research [TVWL3OR5] (S. 53), Methodical Foundations of OR [TVWL3OR6] (S. 54)

Learning Control / Examinations

The assessment consists of a written exam (120 min) according to Section 4 (2), 1 of the examination regulation.

The exam takes place in every semester.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The lecture covers basic quantitative methods in location planning in the context of strategic Supply Chain Planning. Besides the discussion of several criteria for the evaluation of the locations of facilities, the students are acquainted with classical location planning models (planar models, network models and discrete models) and advanced location planning models designed for Supply Chain Management (single-period and multi-period models). The exercises accompanying the lecture offer the possibility to apply the considered models to practical problems.

Content

Since the classical work "Theory of the Location of Industries" of Weber from 1909, the determination of an optimal location of a new facility with respect to existing customers is strongly connected to strategical logistics planning. Strategic decisions concerning the location of facilities as production plants, distribution centers or warehouses are of high importance for the rentability of supply chains. Thoroughly carried out, location planning allows an efficient flow of materials and leads to lower costs and increased customer service.

Subject of the course is an introduction to the most important terms and definitions in location planning as well as the presentation of basic quantitative location planning models. Furthermore, specialized location planning models for Supply Chain Management will be addressed as they are part in many commercial SCM tools for strategic planning tasks.

Complementary literature

- Thonemann: Operations Management - Konzepte, Methoden und Anwendungen, Pearson Studium, 2005

Remarks

The lecture is offered in every summer term.

The planned lectures and courses for the next three years are announced online.

Course: Tactical and Operational Supply Chain Management**Course key: [25488]****Lecturers:** Stefan Nickel**Credit points (CP):** 4.5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Supply Chain Management [TVWL3BWLISM2] (S. 37), Applications of Operations Research [TVWL3OR5] (S. 53), Stochastic Methods and Simulation [TVWL3OR7] (S. 55)**Learning Control / Examinations**

The assessment consists of a written exam (120 minutes) according to Section 4(2), 1 of the examination regulation.

The exam takes place in every the semester.

Prerequisites

Successful completion of the module *Introduction to Operations Research* [TVWL1OR].

Conditions

None.

Learning Outcomes

The main goal of the lecture is the presentation of fundamental techniques from procurement and distribution logistics. A further aspect is set on methods from inventory management and lot sizing. Students acquire the ability to efficiently utilize quantitative models from transportation planning (long-distance and distribution planning), inventory management and lot sizing in production. The introduced methods will be discussed in more detail and illustrated with case-studies in the accompanying exercises

Content

The planning of material transport is an essential element of Supply Chain Management. By linking transport connections across different facilities, the material source (production plant) is connected with the material sink (customer).

The general supply task can be formulated as follows (cf. Gudehus): For given material flows or shipments, choose the optimal (in terms of minimal costs) distribution and transportation chain from the set of possible logistics chains, which asserts the compliance of delivery times and further constraints. The main goal of the inventory management is the optimal determination of order quantities in terms of minimization of fixed and variable costs subject to resource constraints, supply availability and service level requirements. Similarly, the problem of lot sizing in production considers the determination of the optimal amount of products to be produced in a time slot.

The course includes an introduction to basic terms and definitions of Supply Chain Management and a presentation of fundamental quantitative planning models for distribution, vehicle routing, inventory management and lot sizing. Furthermore, case studies from practice will be discussed in detail.

Complementary literature

Remarks

The lecture is offered in every winter term.

The planned lectures and courses for the next three years are announced online.

Course: Software Laboratory: OR Models I**Course key: [25490]****Lecturers:** Stefan Nickel**Credit points (CP):** 4.5 **Hours per week:** 1/2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Applications of Operations Research [TVWL3OR5] (S. 53)**Learning Control / Examinations**

The assessment is a 120 minutes examination, including a written and a practical part (according to §4(2), 1 of the examination regulation).

The examination is held in the term of the software laboratory and the following term.

Prerequisites

Firm knowledge of the contents from the lecture *Introduction to Operations Research I* [25040] of the module *Operations Research* [WI1OR].

Conditions

None.

Learning Outcomes

The software laboratory has the goal to make the students familiar with the usage of computers in practical applications of Operations Research. An important benefit lies in the ability to assess and estimate general possibilities and fields of usage of modeling and implementation software for solving OR models in practice. As software-based planning modules are used in many companies, this course provides a reasonable preparation for students for practical planning activities.

Content

After an introduction to general concepts of modelling tools (implementation, data handling, result interpretation, . . .), the program XPress-MP IVE with its modelling language Mosel will be presented in detail.

Subsequently, a broad range of exercises will be discussed. The main goals of the exercises from literature and practical applications are to learn the process of modeling optimization problems as linear or mixed-integer programs, to efficiently utilize the presented tools for solving these optimization problems and to implement heuristic solution procedures for mixed-integer programs.

Remarks

The course is offered in every winter term.

The planned lectures and courses for the next three years are announced online.

Course: Seminar in Discrete Optimization**Course key: [25491]****Lecturers:** Stefan Nickel**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations**

The assessment consists of a written seminar thesis of 20-25 pages and a presentation of 40-60 minutes (according to §4(2), 3 of the examination regulation).

The final mark for the seminar is the weighted average of the marks for the assessed assignments (seminar thesis 50 %, presentation 50%).

The seminar can be attended both by Bachelor and Master students. A differentiation will be achieved by different valuation standards for the seminar thesis and presentation.

Prerequisites

Successful completion of the module *Introduction to Operations Research* [TVWL1OR].

Conditions

Attendance is compulsory.

If possible, at least one module of the institute should be taken before attending the seminar.

Learning Outcomes

The seminar aims at the presentation, critical evaluation and exemplary discussion of recent questions in discrete optimization. The focus lies on optimization models and algorithms, also with regard to their applicability in practical cases (especially in Supply Chain and Health Care Management).

The students get in touch with scientific working: The in-depth work with a special scientific topic makes the students familiar with scientific literature research and argumentation methods. As a further aspect of scientific work, especially for Master students the emphasis is put on a critical discussion of the seminar topic.

Regarding the seminar presentations, the students will be familiarized with basic presentational and rhetoric skills.

Content

The topic of the seminar will be announced at the end of the preceding term on the internet.

Basic literature

Literature and relevant sources will be announced at the beginning of the seminar.

Remarks

The seminar is offered in each term.

Course: Welfare Economics**Course key: [25517]****Lecturers:** Clemens Puppe**Credit points (CP):** 4.5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Microeconomic Theory [TVWL3VWL6] (S. 30)**Learning Control / Examinations**

The assessment consists of a written exam at the end of the semester (according to Section 4 (2), 1 or 2 of the examination regulation.

The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

The courses *Economics I: Microeconomics* [25012] and *Economics II: Macroeconomics* [25014] have to be completed beforehand.

Conditions

None.

Learning Outcomes**Content****Complementary literature**

Course: Game Theory I**Course key: [25525]****Lecturers:** Siegfried Berninghaus**Credit points (CP):** 4.5 **Hours per week:** 2/2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Applied Game Theory [TVWL3VWL1] (S. 27), Strategic Games [TVWL3VWL4] (S. 28), Microeconomic Theory [TVWL3VWL6] (S. 30)**Learning Control / Examinations**

The assessment consists of a written exam (80 minutes) according to Section 4(2),1 of the examination regulation.

The exam takes place in the recess period and can be resited at every ordinary examination date.

Prerequisites

Basic knowledge of mathematics and statistics is assumed.

See corresponding module information.

Conditions

None.

Learning Outcomes

This course conveys established knowledge in theory of strategic decision making. The students shall be able to analyze strategic problems systematically and to give advice for behavior in concrete economic situations.

Content

Main topic is non-cooperative game theory. Models, solution concepts and applications are discussed for simultaneous as well as sequential games. Different equilibrium concepts are introduced and a short introduction to cooperative game theory is given.

Course: Advanced Topics in Economic Theory**Course key: [25527]****Lecturers:** Clemens Puppe, Marten Hillebrand, Kay Mitusch**Credit points (CP):** 4.5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Microeconomic Theory [TVWL3VWL6] (S. 30)**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes**Content**

The focus of the course is the modern economic theory of (general) equilibrium.

The course is divided into three parts.

The first part introduces the microeconomic foundations of general equilibrium à la Debreu ("The Theory of Value", 1959) and Hildenbrand/Kirman ("Equilibrium Analysis", 1988).

The second part considers dynamic (stochastic) equilibrium models with a particular focus on the overlapping generations model which lie at the heart of modern macroeconomics.

The third part deals with asymmetric information and introduces the basic models based on Akerlof's "Market for Lemons."

The course is largely based on the textbook "Microeconomic Theory" (Chapters 1-5, 10, 13-20) by A.Mas-Colell, M.D.Whinston, and J.R.Green

Basic literature

The course is based on the excellent textbook "Microeconomic Theory" (Chapters 1-5, 10, 13-20) by A.Mas-Colell, M.D.Whinston, and J.R.Green

Remarks

The lecture will be offered in the summer term 2010 for the first time.

*Up to now, the lecture was named **Advanced Microeconomic Theory**.*

Course: Theory of Economic Growth**Course key: [25543]****Lecturers:** Marten Hillebrand**Credit points (CP):** 4.5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 4**Teaching language:** Englisch**Part of the modules:** Macroeconomic Theory [TVWL3VWL8] (S. David Romer, *Advanced Macroeconomics*, 3rd edition, McGraw-Hill (2006)

Lutz Arnold: Makroökonomik. Eine Einführung in die Theorie der Güter-, Arbeits- und Finanzmärkte (2003)

Course: Simulation I**Course key: [25662]****Lecturers:** Karl-Heinz Waldmann**Credit points (CP):** 4.5 **Hours per week:** 2/1/2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Applications of Operations Research [TVWL3OR5] (S. 53), Stochastic Methods and Simulation [TVWL3OR7] (S. 55)**Learning Control / Examinations**

The assessment consists of an 1h written exam according to Section 4(2), 1 of the examination regulation. Credit from the voluntary computer lab is accounted for in the overall grade raising the exam grade by 0.3 (according to Section 4(2), 3 of the examination regulation).

Prerequisites

Foundations in the following fields are required:

- Operations Research, as lectured in *Introduction to Operations Research I* [25040] and *Introduction to Operations Research II* [25043].
- Statistics, as lectured in *Statistics I* [25008/25009] and *Statistics II* [25020/25021].

Conditions

None.

Learning Outcomes

The lecture provides insights into the typical process in planning and conducting simulation studies.

Content

As the world is getting more complex it is often not possible to analytically provide key figures of interest without overly simplifying the problem. Thus efficient simulation techniques become more and more important. In the lecture important basic concepts are presented in terms of selected case studies.

Topics overview: Discrete event simulation, generation of random numbers, generating discrete and continuous random variables, statistical analysis of simulated data.

- K.-H. Waldmann / U. M. Stocker: *Stochastische Modelle - Eine anwendungsorientierte Einführung*; Springer (2004).

Remarks

The lecture is offered irregularly. The curriculum of the next two years is available online.

Course: Markov Decision Models I**Course key: [25679]****Lecturers:** Karl-Heinz Waldmann**Credit points (CP):** 5 **Hours per week:** 2/1/2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Methodical Foundations of OR [TVWL3OR6] (S. 54), Stochastic Methods and Simulation [TVWL3OR7] (S. 55)**Learning Control / Examinations**

The assessment consists of an 1h written exam following Section 4(2), 1 of the examination regulation. Credit from the voluntary computer lab is accounted for in the overall grade raising the exam grade by 0.3 (according to Section 4(2), 3 of the examination regulation).

Prerequisites

None.

Conditions

None.

Learning Outcomes

The lecture provides students with knowledge of modern techniques of stochastic modelling. Students are able to properly describe and analyze basic stochastic systems.

Content

Markov Chains, Poisson Processes, Markov Chains in Continuous Time, Queuing Systems

Media

Blackboard, Slides, Flash Animations, Simulation Software

Basic literature

Course: Efficient Algorithms**Course key: [25700]****Lecturers:** Hartmut Schmeck**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. [51](#)), Electives in Informatic [TVWL3INFO2] (S. [52](#))**Learning Control / Examinations**

The assessment consists of assignments or of a bonus exam (wrt §4 (2), 3 SPO), and a written exam (60 min.) in the week after the end of the lecturing periodwrt (§4 (2), 1 SPO).

If the mark obtained in the written exam is in between 1.3 and 4.0, a successful completion of the assignments or the bonus exam will improve the mark by one level (i.e. by 0.3 or 0.4).

Deviations from this type of assessment are announced at the beginning of this course.

Prerequisites

credits for the Informatics modules of years 1 and 2.

Conditions

None.

Learning Outcomes

The student will learn how to use methods and concepts of efficient algorithms and how to demonstrate adequate innovative capabilities with respect to the used methods.

This course emphasizes the teaching of advanced concepts for the design and application of algorithms, data structures, and computer infrastructures in relation to their applicability in the real world. Based on a fundamental understanding of the covered concepts and methods, students should know how to select appropriate concepts and methods for problem settings in their professional life, and, if necessary, to extend and apply them in an adequate form. The students should be enabled to find adequate arguments for justifying their chosen problem solutions.

Content

In a problem oriented way the course presents systematic approaches to the design and analysis of efficient algorithms using standard tasks of information processing as generic examples. Special emphasis is put on the influence of data structures and computer architectures on the performance and cost of algorithms. In particular, the course emphasizes the design and analysis of algorithms on parallel computers and in hardware, which is increasingly important considering the growing presence of multicore architectures.

Complementary literature

will be announced in class

Course: Algorithms for Internet Applications**Course key: [25702]****Lecturers:** Hartmut Schmeck**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 4**Teaching language:** Englisch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. 51), Electives in Informatic [TVWL3INFO2] (S. 52)**Learning Control / Examinations**

The assessment consists of a written exam (60 min) (according to Section 4(2), 1 of the examination regulation) and an additional written examination (called "bonus exam", 60 min) (according Section 4(2), 3 of the examination regulation) (the bonus exam may be split into several shorter written tests).

The grade of this course is the achieved grade in the written examination. If this grade is at least 4.0 and at most 1.3, a passed bonus exam will improve it by one grade level (i.e. by 0.3 or 0.4).

Prerequisites

None.

Conditions

None.

Learning Outcomes

The students will learn to master methods and concepts of essential algorithms within Internet applications and to develop capabilities for innovative improvements. The course aims at teaching advanced concepts for the design and application of algorithms with respect to the requirements in networked systems. Based on a fundamental understanding of taught concepts and methods the students should be able to select appropriate concepts and methods for problem settings in their future professional life, and - if necessary - customize and apply them in an adequate way. The students will be capable to find appropriate arguments for their chosen approach to a problem setting.

In particular, the student will - know the structure and elementary protocols of the Internet (TCP/IP) and standard routing algorithms (distance vector and link state routing), - know methods of information retrieval in the WWW, algorithms for searching information and be able to assess the performance of search engines, - know how to design and use cryptographic methods and protocols to guarantee and check confidentiality, data integrity and authenticity, - know algorithmic basics of electronic payment systems and of electronic money, - the architectures and methodologies of firewalls.

Content

Internet and World Wide Web are changing our world, this core course provides the necessary background and methods for the design of central applications of the Internet. After an introduction into Internet technology the following topics are addressed: information retrieval in the www, structure and functioning of search engines, foundations of secure communication, electronic payment systems and digital money, and - if time permits - security architectures (firewalls), data compression, distributed computing on the Internet.

Media

Course: Database Systems**Course key: [25720]****Lecturers:** Andreas Oberweis, Dr. D. Sommer**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Electives in Informatic [TVWL3INFO2] (S. 52)**Learning Control / Examinations**

The assessment consists of an 1h written exam in the first week after lecture period.

Prerequisites

Knowledge of course *Applied Informatics I - Modelling* [25070] is expected.

Conditions

None.

Learning Outcomes

Students

- are familiar with the concepts and principles of data base models, languages and systems and their applications,
- can design and model relational data bases on the basis of theoretical foundations,
- are able to ensure an error-free operation and the integrity of the data base and
- know how to handle enhanced data base problems occurring in the enterprises.

Content

Database systems (DBS) play an important role in today's companies. Internal and external data is stored and processed in databases in every company. The proper management and organization of data helps to solve many problems, enables simultaneous queries from multiple users and is the organizational and operational base for the entire working procedures and processes of the company. The lecture leads in the area of the database theory, covers the basics of database languages and database systems, considers basic concepts of object-oriented and XML databases, conveys the principles of multi-user control of databases and physical data organization. In addition, it gives an overview of business problems often encountered in practice such as:

- Correctness of data (operational, semantic integrity)
- Restore of a consistent database state
- Synchronization of parallel transactions (phantom problem).

Further literature will be given individually.

Course: Software Engineering**Course key: [25728]****Lecturers:** Andreas Oberweis, Detlef Seese**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. 51), Electives in Informatic [TVWL3INFO2] (S. 52)**Learning Control / Examinations**

The assessment consists of an 1h written exam in the first week after lecture period.

Prerequisites

Modul "Introduction to Informatics" [TVWL1INFO] is precondition

Conditions

None.

Learning Outcomes

Students

- are familiar with the concepts and principles of software engineering
- know important and common software development process models
- know methods for requirements analysis and know how to model and evaluate use case models
- know models for systems structuring and controlling as well as architecture principles of software systems.
- can model and evaluate component diagrams
- are familiar with basic concepts of software quality management and are able to apply software test and evaluation methods.

Content

The course deals with fundamental aspects of the systematically development of huge software systems. The course covers topics such as:

- software developing process models
- methods and tools for the development phases: requirements analysis, system specification, system design, programming and testing.

Media

Slides, access to internet resources.

Course: Knowledge Management**Course key: [25740]****Lecturers:** Rudi Studer**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. 51), Electives in Informatic [TVWL3INFO2] (S. 52)**Learning Control / Examinations**

Written Examination (60 min) according to §4, Abs. 2, 1 of the examination regulations or oral examination of 20 minutes according to §4, Abs. 2, 2 of the examination regulations. The exam takes place every semester and can be repeated at every regular examination date.

Prerequisites

Basics in logic, e.g. from lecture Foundations of Informatics 1.

Conditions

None.

Learning Outcomes

Making students sensitive to the problems of corporate knowledge management, knowledge about the central dimensions of influence as well as of relevant technologies for supporting knowledge management.

Content

In modern corporations, knowledge is an increasingly important aspect for fulfilling central tasks (amelioration of business processes, increasing innovation, increasing customer satisfaction, strategic planning and the like). Therefore, knowledge management has become a determining factor of success.

The lecture covers the different types of knowledge that play a role in knowledge management, the corresponding knowledge processes (generation, capture, access and usage of knowledge) as well as methodologies for the introduction of knowledge management solutions.

The lecture will further emphasize the following computer science techniques for knowledge management:

- Communities of Practice, Collaboration Tools, Skill Management
- ontology-based knowledge management
- Business Process oriented Knowledge Management
- Personal Knowledge Management
- Case Based Reasoning (CBR)

Media

Slides and scientific publications as reading material.

Course: Semantic Web Technologies I

Course key: [25748]

Lecturers: Rudi Studer, Sebastian Rudolph

Credit points (CP): 5 **Hours per week:** 2/1

Term: Wintersemester **Level:** 4

Teaching language: Deutsch

Part of the modules: Electives in Informatic [TVWL3INFO2] (S. 52)

Learning Control / Examinations

The assessment consists of an 1h written exam following §4, Abs. 2, 1 of the examination regulation or of an oral exam (20 min) following §4, Abs. 2, 2 of the examination regulation.

The exam takes place every semester and can be repeated at every regular examination date.

Prerequisites

Lectures on Informatics of the Bachelor on Information Management (Semester 1-4) or equivalent.

Conditions

None.

Learning Outcomes

- Basic knowledge about the main ideas and the realisation of Semantic Web Technologies

Content

"Semantic Web" denotes an extension of the World Wide Web by meta data and applications in order to make the meaning (semantics) of data on the web usable by intelligent systems, e.g. in e-commerce and internet portals. Central to this is the representation and processing of knowledge in form of ontologies. This lecture provides the foundations for knowledge representation and processing for the corresponding technologies and presents example applications. It covers the following topics:

- Extensible Markup Language (XML)
- Resource Description Framework (RDF) and RDF Schema
- Web Ontology Language (OWL)
- Rule Languages
- Applications

Media

Slides.

Course: Complexity Management**Course key: [25760]****Lecturers:** Detlef Seese**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 4**Teaching language:** Englisch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. 51), Electives in Informatic [TVWL3INFO2] (S. 52)**Learning Control / Examinations**

The assessment of this course consists of a written examination (60 min) (following §4(2), 1 SPO). The exam will be offered every semester and may be repeated at every ordinary exam date.

Questions are in English, answers are possible in German or in English.

In case that only a small number of candidates apply for the examination there will be offered an oral examination according to Section 4(2),1 of the examination regulation.

Prerequisites

A basic knowledge in informatics is suitable.

Conditions

None.

Learning Outcomes

Students will be enabled to acquire abilities, methods and instruments in the area of complexity management and learn to use them in an innovative way. The students should be enabled to find arguments for the solution of problems in this area. The basic goal of the lecture is to enable to understand the difficulties to manage complex systems and processes.

Content

Complexity is one of the biggest challenges of our time. Central questions are: - Why humans often fail in complex situations? - What is complexity? - What are reasons for complexity? - Which parameters are essential to control complexity? - How systems have to be designed to reduce their complexity and to enable management of complexity?

The lecture gives a survey on fundamental results and handles the following topics: - Understanding of the difficulties produced by complex systems and complex processes - Foundations: modelling complex systems, complexity theory, descriptive, structural and parametric complexity, dynamic systems, topology, dimension, non-linearity, chaos, randomness and emerging structures, human shortcomings, simulation - Complexity of products and production - Complexity of markets - How to improve complexity management? - Decision support by intelligent use of IT

Media

The slides of the lectures will be provided on the website of the lecture.

Course: Intelligent Systems in Finance**Course key: [25762]****Lecturers:** Detlef Seese**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** eFinance [TVWL3BWLISM3] (S. 38), Electives in Informatic [TVWL3INFO2] (S. 52)**Learning Control / Examinations**

The assessment is a written examination.

See the German part for special requirements to be admitted for the examination.

Prerequisites

None.

Conditions

None.

Learning Outcomes

- The students acquire abilities and knowledge of methods and systems from the area of machine learning and learn how to use them in the area of finance, which is the core area of application of this lecture.
- It is taught the ability to choose and change these methods and systems adequate to the situation and to use them for problem solving in the area of finance.
- The students get the ability to find strategic and creative answers in their search for solutions for precisely defined, concrete and abstract problems.
- At the same time the lecture aims to give foundational knowledge and methods in the context of their application in practise. On the basis of the basic understanding of concepts and methods of informatics the students should be able to comprehend quickly the new developments in the area and to use them correctly.

Content

A new generation of computing methods, commonly known as "intelligent systems", has recently been successfully applied to a variety of business and financial modelling tasks. In many application fields these novel methods outperform traditional statistical techniques. The lecture provides a comprehensive coverage of the area, including foundations and applications. In particular it deals with intelligent software agents, genetic algorithms, neural networks, support vector machines, fuzzy-logic, expert systems and intelligent hybrid systems. The presented applications focus on the finance area and are related to risk management (credit risk, operational risk), financial trading, portfolio management and economic modelling. The lecture is given in cooperation with the company msgGILLARDON. The lecture starts with an introduction of the central problems of application in this area, e.g. decision support for investors, Portfolioselection under constraints, information retrieval from business reports, automatic development of trading rules for the capital market, modelling of time series at the capital market, explanation of phenomena at capital markets by simulation, decision support in risk management (credit risk, operational risk). After this the basics of intelligent systems are discussed. Basic ideas and essential results for different stochastic heuristics for local search are discussed next, especially Hill Climbing, Simulated Annealing, Threshold Accepting and Tabu Search. After this different population-based approaches of evolutionary methods are presented, e.g. Genetic Algorithms, Evolutionary Strategies and Programming, Genetic Programming, Memetic Algorithms and Ant-Algorithms. It follows an introduction into Neural Networks, Support Vector Machines and Fuzzylogic. Softwareagents and agentbased stock market models are the next topic. The lecture ends with an overview on the complexity of algorithmic problems in the area of finance, giving in this way one of the key reasons for the necessity to use heuristics and intelligent systems. Essential examples and basic applications are choosen from the area of finance.

Course: Advanced Programming - Java Network Programming**Course key: [25780]****Lecturers:** Detlef Seese, Ratz**Credit points (CP):** 5 **Hours per week:** 2/1/2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. [51](#))**Learning Control / Examinations**

The assessment consists of a written exam (120 min) according to Section 4(2), 1 of the examination regulation.

The successful completion of the compulsory tests in the computer lab is prerequisite for admission to the written exam. Further information about attendance to the exercises and practical terms will be announced in the first lecture and at the lecture homepage.

The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

Successful completion of the course *Introduction to Programming with Java* [25030].

Conditions

None.

Learning Outcomes

Course: Advanced Programming - Application of Business Software Course key: [25886]

Lecturers: Andreas Oberweis, Stefan Klink

Credit points (CP): 5 **Hours per week:** 2/1/2

Term: Wintersemester **Level:** 3

Teaching language: Deutsch

Part of the modules: Emphasis Informatics [TVWL3INFO1] (S. 51)

Learning Control / Examinations

The assessment consists of a written examination of 2 hours (according to Section 4 (2), 1 of the examination regulation) and of assignments during the course (according to Section 4 (2), 3 of the examination regulation).

Successful participation to the computer lab is precondition for permission to the assessment. Further information will be given at the first lesson and via the homepage of the course.

The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

Knowledge of the course "Grundlagen der Informatik I und II" are helpfull.

Conditions

None.

Learning Outcomes

Students

- master basic concepts and principles of enterprise information systems,
- can model and implement operative workflows
- apply standard software for modelling business processes and for analysing them to given criteria
- master the installation, configuration, and parameterisation of enterprise information systems in business and
- assess economical aspects of such systems.

Content

Business information systems enable, support, and accelerate new forms of business processes and forms of organisation. They are the central infrastructure of the economy in the age of eBusiness. Thus, basic knowledge is given in lectures, in exercises and in the computer lab which deals with installation, configuration and parameterization of business information systems. The course communicates profound knowledge in following topics:

- Analysis of cooperation scenarios and business process scenarios
- Selection of modelling methods according to defined criteria
- Implementation of business process models and cooperation models with the help of standard software
- Identification and assessment of challenges during the installation of information systems
- Economical evaluation of business information systems.

Media

Slides, access to internet resources.

Further literature will be given during the course.

Course: Management and Strategy**Course key: [25900]****Lecturers:** Hagen Lindstädt**Credit points (CP):** 4 **Hours per week:** 2/0**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Strategy and Organization [TVWL3BWL01] (S. [48](#))**Learning Control / Examinations**

The assessment consists of a written exam (60 min) taking place at the beginning of the recess period (according to §4 (2), 1 of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The participants learn about central concepts of strategic management along the ideal-typical strategy process: internal and external strategic analysis, concept and sources of competitive advantages, their importance when establishing competitive and corporate strategies as well as strategy assessment and implementation. This aims in particular to provide a summary of the basic concepts and models of strategic management, i.e. to provide in particular an action-oriented integration.

Content

- Corporate management principles
- Strategic management principles
- Strategic analysis
- Competitive strategy: modelling and selection on a divisional level
- Strategies for oligopolies and networks: anticipation of dependencies
- Corporate strategy: modelling and evaluation on a corporate level
- Strategy implementation

Course: Managing Organizations**Course key: [25902]****Lecturers:** Hagen Lindstädt**Credit points (CP):** 4 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Strategy and Organization [TVWL3BWL01] (S. 48)**Learning Control / Examinations**

The assessment will consist of a written exam (60 min) taking place at the beginning of the recess period (according to Section 4 (2), 2 of the examination regulation). The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The course should enable the participants to assess the strengths and weaknesses of existing organisational structures and rules using systematic criteria. Here concepts and models for designing organisation structures, regulating organisational processes and managing organisational changes are presented and discussed using case studies. The course is structured to relate to actions and aims to give students a realistic view of the opportunities and limits of rational design approaches.

Content

- Principles of organisational management
- Managing organisational structures and processes: the selection of design parameters
- Ideal-typical organisational structures: choice and effect of parameter combinations
- Managing organisational changes

Media

Slides.

Course: Special Topics in Management: Management and IT**Course key: [25907]****Lecturers:** Hagen Lindstädt**Credit points (CP):** 2 **Hours per week:** 1/0**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Strategy and Organization [TVWL3BWL01] (S. [48](#))**Learning Control / Examinations**

The assessment consists of a written exam (30 min) at the beginning of the recess period (according to Section 4(2), 1 of the examination regulation).

The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The course discusses management questions and concepts that are clearly motivating from a current and practical perspective. Here the integration of IT and process issues into corporate management from the management's perspective is one of the subjects of particular interest. The event takes place in close cooperation with leading, practical managers.

Content

(Excerpt):

- A summary of current management concepts and questions.

Media

Slides.

Basic literature

The relevant excerpts and additional sources are made known during the course.

Course: Fundamentals of Production Management**Course key: [25950]****Lecturers:** Frank Schultmann**Credit points (CP):** 5.5 **Hours per week:** 2/2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Industrial Production I [TVWL3BWLIIIP] (S. 49)**Learning Control / Examinations**

The examination will be in form of a written exam acc. to §4(2), 1 ER. Exams are offered in every semester and can be re-examined at every ordinary examination date.

Prerequisites

None.

Conditions

This course is compulsory in module "Industrial Production I" [WW4BWLIIIP].

Learning Outcomes

- Students shall describe the tasks of strategic corporate planning.
- Students shall be able to use general approaches in order to solve these problems.

Content

This lecture focuses on strategic production management with respect to various economic aspects. Interdisciplinary approaches of systems theory will be used to describe the challenges of industrial production. This course will emphasize the importance of R&D as the central step in strategic corporate planning to ensure future long-term success.

In the field of site selection and planning for firms and factories, attention will be drawn upon individual aspects of existing and greenfield sites as well as existing distribution and supply centres. Students will obtain knowledge in solving internal and external transport and storage problems with respect to supply chain management and disposal logistics.

Medien und Pflichtliteratur: können aus der alten Fassung übernommen werden.

Media

Media will be provided on learning platform.

Basic literature

will be announced in the course

Course: Energy Policy**Course key: [25959]****Lecturers:** Martin Wietschel**Credit points (CP):** 3.5 **Hours per week:** 2/0**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Energy Economics [TVWLIIIP2] (S. 50)**Learning Control / Examinations**

The assessment consists of a written exam according to Section 4(2), 1 of the examination regulation.

The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

Keine.

Conditions

Keine.

Learning Outcomes**Content**

The course deals with material and energy policy of policy makers and includes the effects of such policies on the economy as well as the involvement of industrial and other stakeholders in the policy design. At the beginning the neoclassical environment policy is discussed. Afterwards the Sustainable Development concept is presented and strategies how to translate the concept in policy decision follows. In the next part of the course an overview about the different environmental instruments classes, evaluation criteria for these instruments and examples of environmental instruments like taxes or certificates will be discussed. The final part deals with implementation strategies of material and energy policy.

Basic literature

Will be announced in the lecture.

Course: Material and Energy Flows in the Economy**Course key: [25960]****Lecturers:** Michael Hiete**Credit points (CP):** 3.5 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Industrial Production I [TVWL3BWLIIIP] (S. [49](#))**Learning Control / Examinations**

The examination will be in form of a written exam acc. to §4(2), 1 ER. Exams are offered in every semester and can be re-examined at every ordinary examination date.

Prerequisites

Successful completion of module "Betriebswirtschaftslehre" [TVWL1BWL].

Conditions

None.

Learning Outcomes

Students shall be aware of issues concerning the material and energy flow in an economy and shall apply strategies to solve these issues.

Content

Internal and external management of material flows will be the focus of this lecture. Herein, the discussion will be about cost-effective and environmentally acceptable steps to avoid, abate and recycle emissions and waste as well as ways of efficient resources handling.

These topics will be analysed with tools such as eco-balancing and environmental-controlling accompanied by special IT-tools. Further approaches, decision supporting models and OR-algorithms are being introduced in case studies.

Basic literature

will be announced in the course

Remarks

This lecture will be called "Stoffstromorientierte Produktionswirtschaft" from Winter 2010/2011 onwards.

Course: Logistics and Supply Chain Management**Course key: [25996]****Lecturers:** Frank Schultmann**Credit points (CP):** 3.5 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Industrial Production I [TVWL3BWLIIIP] (S. [49](#))**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes

Students shall learn foundations and main characteristics of managerial logistics and supply chain management. Following an overview of basic managerial logistics functions, students will learn the interdependencies and trade-offs between these functions and concurring aims. Additionally, students will gain knowledge in designing and steering internal and external value-creating networks.

Content

This course covers following topics:

- Introduction into logistics
- Fields of activity
- Aims and costs of logistics
- Performance and performance figures
- Supply logistics
- Production logistics
- Distributing logistics
- Reverse logistics
- Definition and aims of Supply Chain Management
- Concepts of Supply Chain Management
- Modeling Supply Chains

Media

Media will be provided on learning platform.

Course: Introduction to Energy Economics**Course key: [26010]****Lecturers:** Wolf Fichtner**Credit points (CP):** 5.5 **Hours per week:** 2/2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Energy Economics [TVWLIIIP2] (S. [50](#))**Learning Control / Examinations**

The assessment consists of a written exam according to Section 4(2), 1 of the examination regulation.

Prerequisites

See module description.

Conditions

None.

Learning Outcomes**Content****Media**

Media will likely be provided on the e-learning platform ILIAS.

Course: Public Revenues**Course key: [26120]****Lecturers:** Berthold Wigger**Credit points (CP):** 4,5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Public Finance [TVWL3VWL9] (S. [32](#))**Learning Control / Examinations**

The assessment consists of an 1h written exam following Art. 4, para. 2, clause 1 of the examination regulation. The grade for this course equals the grade of the written exam.

Prerequisites

Basic knowledge of Public Finance is required.

Conditions

None.

Learning Outcomes**Content**

The *Public Revenues* lecture is concerned with the theory and policy of taxation and public dept. In the first chapter, fundamental concepts of taxation theory are introduced, whereas the second chapter deals with key elements of the German taxation system. The allocative and distributive effects of different taxation types are examined in chapter three and four. Chapter five integrates both allocative and distributive components in order to derive a theory of optimal taxation. The core of the sixth chapter is represented by international aspects of taxation. The debt part begins with a description of the extent and structure of public dept in chapter seven. In the following chapter, macroeconomic theories of national dept are evolved, while chapter nine is concerned with its long term consequences when employed as a regular instrument of budgeting. Finally, the tenth chapter deals with constitutional limits to public debt-incurring.

Course: Fiscal Policy**Course key: [26122]****Lecturers:** Berthold Wigger**Credit points (CP):** 4,5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Public Finance [TVWL3VWL9] (S. 32)**Learning Control / Examinations**

The assessment consists of an 1h written exam following Art. 4, para. 2, clause 1 of the examination regulation. The grade for this course equals the grade of the written exam.

Prerequisites

Basic knowledge of Public Finance is required.

Conditions

None.

Learning Outcomes**Content**

The lecture is concerned with the incentive structures for public agents. An overview of the subject is given in chapter one. The second chapter introduces basic concepts of public choice, while emphasizing the consistency characteristics of collective decision-making. Moreover, it analyzes which circumstances lead to so-called government failure. Chapter three examines selected public activities from a political economy perspective. Taxes and public debt as well as public pension schemes are scrutinized. The fourth chapter deals with decentralization of fiscal policy in federalized states. In this context, the fiscal constitutions of the Federal Republic of Germany and the European Union as applied forms of fiscal federalism are introduced.

Course: Seminar Public Finance**Course key: [26130]****Lecturers:** Berthold Wigger**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

See module description.

Conditions

Adequate for students in an advanced stage of their studies.

Learning Outcomes**Content**

Preparation, presentation, and discussion of recent research papers on varying Public Finance issues. The current seminar subject, including the exact topics to work on, will be announced under <http://fiwi.iww.kit.edu> and on the notice board prior to the start of semester.

Basic literature

Will be announced at the beginning of the seminar.

Course: Seminar Goethe's Faust and the 21st Century Economy**Course key: [26131]****Lecturers:** Berthold Wigger**Credit points (CP):** 3 **Hours per week:** 2**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations****Prerequisites**

See module description.

Conditions

Adequate for students in an advanced stage of their studies.

Learning Outcomes**Content**

The seminar deals with the following topics:

- References to the financial crisis,
- Creation of money,
- Goethe as tradesman,
- Money and magic (Binswanger),
- Goethe and Public Finance.

Detailed information, including the exact topics to work on, will be announced under <http://fiwi.iww.kit.edu> and on the notice board prior to the start of semester.

Basic literature

Will be announced at the beginning of the seminar.

Course: Competition in Networks**Course key: [26240]****Lecturers:** Kay Mitusch**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Specialization in Customer Relationship Management [TVWL3BWLISM5] (S. [40](#))**Learning Control / Examinations****Prerequisites**

Basics of microeconomics obtained within the undergraduate programme (B.Sc) of economics are required. Useful, but not necessary, are basic knowledge of industrial economics, principal agent theory, and contract theory.

Conditions

None.

Learning Outcomes

The lecture provides the students with the basic economic understanding of network industries like telecom, utilities, IT and transport sectors.

Students are prepared for a possible job in the network industries. The student should get a vivid idea of the special characteristics of network industries concerning planning, competition, competitive distortion and state intervention. He should be able to apply abstract concepts and formal methods to use in these fields.

Content

Network or infrastructure industries like telecommunication, transport, and utilities form the backbone of modern economies. The lecture provides an overview of the economic characteristics of network industries. The planning of networks is complicated by the multitude of aspects involved (like spatial differentiation and the like). The interactions of different companies – competition or cooperation or both – are characterized by complex interdependencies within the networks: network effects, economies of scale, effects of vertical integration, switching costs, standardization, compatibility etc. appear increasingly in these sectors and even tend to appear in combination. Additionally, government interventions can often be observed, partly driven by the aims of competition policy and partly driven by the aims industrial policy. All these issues are brought up, analyzed formally (in part) and illustrated by several examples in the lecture.

Basic literature

Will be announced in the lecture.

Remarks

Beginning in WT 2009/2010, the lecture *Competition in Networks* [26240] will always be held during the winter term.

Course: International Economics**Course key: [26252]****Lecturers:** Jan Kowalski**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** International Economics [TVWL3VWL3] (S. [29](#))**Learning Control / Examinations**

The assessment consists of a written exam (60 min) according to Section 4(2), 1 of the examination regulation. The exam takes place in every semester. Re-examinations are offered at every ordinary examination date.

None.

Learning Outcomes**Content**

Course: Seminar on Network Economics**Course key: [26263]****Lecturers:** Kay Mitusch**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations**

The assessment consists of a seminar paper of 15-20 pages, a presentation of results and active participation in the discussion during the seminar (according to §4(2), 3 ERSC)

The grading is carried out primarily in reference to the seminar paper, however, divergent performance in the presentation will be accounted for by a corresponding adjustment. In particular, there is the chance to improve grades through good participation during the seminar.

Prerequisites

See module description.

Conditions

Basic knowledge of network economics is required. The course *Competition in Networks* [26240] should be completed.

Learning Outcomes

The student

- can acquire a scientific article to an economic topic,
- deepens his/her knowledge in network economics,
- gets inspiration for a potential master thesis.

Content

The current theme of the seminar including the suggestion of topics for the seminar papers will be announced in KIM and on the notice board at the institute.

Learning Outcomes

Learning to identify, to analyse and to assess business risks; this serves as a basis for strategy and policy design regarding risks and opportunities of an enterprise. Introduction to optimization approaches that allow to consider area-specific objectives, risk-bearing capacity and risk acceptance.

Content

1. Concepts and practice of risk management, based on decision theory
2. Goals, strategies and measures for the identification, analysis, assessment and management of risks
3. Insurance as an instrument for loss-financing
4. Selected aspects of risk management: e.g. environmental protection, organizational failure and D&O-coverage, development of a risk management culture
5. Organisation of risk management
6. Approaches for determining optimal combinations of risk management measures considering their investment costs and outcomes.

The assessment consists of a written exam (according to Section 4 (2), 1 of the examination regulation) .

The exam takes place at every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

None.

Learning Outcomes

Becoming acquainted with the various possibilities of international risk transfer.

Content

How are the costs of potential major damages financed and covered on a global scale? Traditionally, direct insurers and, especially, reinsurers are conducting a global business, Lloyd's of London is a turntable for international risks, and global industrial enterprises are establishing captives for self insurance. In addition to this, capital markets and insurance markets are developing innovative approaches to cover risks, which were hard to insure in the past (e.g. weather risk). The lecture will elucidate the functioning and the background of these different possibilities of international risk transfer.

Course: Real Estate Management II**Course key: [26400]****Lecturers:** Thomas Lützkendorf**Credit points (CP):** 4,5 **Hours per week:** 2/2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Real Estate Management [TVWL3BWLOOW2] (S. 35)**Learning Control / Examinations**

The assessment consists of a written exam (60 min) or an oral exam (20 min.) according to Section 4 (2), 1 or 2 of the examination regulation.

The exam takes place twice at every summer-semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

A combination with the module *Design Construction and Assessment of Green Buildings I* [TVWL3BWLOOW1] is recommended. Furthermore it is recommended to choose courses of the following fields

- Finance and Banking
- Insurance
- Civil Engineering and Architecture (building physics, structural design, facility management)

Conditions

None.

Learning Outcomes

Application of economic methods to the fields of real estate economics and sustainable construction.

Content

The course Real Estate Management II gives special attention to topics in connection to the management of large real estate portfolios. This especially includes property valuation, market and object rating, maintenance and modernization, as well as real estate portfolio and risk management. The tutorial provides examples in order to practice the application of theoretical knowledge to practical problems.

Media

Presentation slides and supplementary material is provided partly as printout, partly online for download.

Remarks

The course is replenished by excursions and guest lectures by practitioners out of the real estate business.

Course: Sustainability Assessment of Construction Works**Course key: [26404]****Lecturers:** Thomas Lützkendorf**Credit points (CP):** 4,5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Sustainable Construction [TVWL3BWLOOW1] (S. [34](#))**Learning Control / Examinations**

The assessment consists of a written or an oral exam (20 min.) according to Section 4 (2), 1 or 2 of the examination regulation. The exam takes place at every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

A combination with the module *Real Estate Management* [TVWL3BWLOOW2] and with engineering science modules from the areas building physics and structural design is recommended.

Conditions

None.

Learning Outcomes

Knowledge in the area of economic and environmental assessment of construction works.

Content

The course identifies problems concerning the economical and environmental assessment of buildings along their lifecycle and discusses suitable procedures and tools supporting the decision making process. For example, the course addresses topics like operating costs, heat cost allocation, comparisons of heating costs, applied economical assessment methods, life cycle assessment as well as related design and assessment tools (e.g. element catalogues, databases, emblems, tools) and assessment procedures (e.g. carbon footprint, MIPS, KEA), which are currently available.

Complementary literature

See german version.

Course: Topics of Sustainable Management of Housing and Real Estate [26420]**Course key:****Lecturers:** Thomas Lützkendorf**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations**

The assessment of this course is (according to §4(2), 3 SPO) in form of an examination of the written seminar thesis and a presentation.

Prerequisites

None.

Conditions

None.

Learning Outcomes

- Students autonomously compile a paper treating of a marked-off subject within the area of real estate economics respectively sustainable construction, and present their results within the seminar.
- Therefore they master the principles of scientific writing, especially research, reasoning and citation, as well as handling information suspiciously.
- Through own and observed experiences they develop the ability to hold scientific presentations, including technical, formal, rhetorical and didactical aspects.

Content

The seminar deals with changing up-to-date topics concerning Real Estate Economics or Sustainable Construction. Current topics and schedules are announced at the beginning of term.

Media

A reader dealing with the basics of scientific writing is provided (in german language).

Course: Management of Business Networks**Course key: [26452]****Lecturers:** Christof Weinhardt, Jan Kraemer**Credit points (CP):** 4.5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 4**Teaching language:** Englisch**Part of the modules:** eBusiness and Servicemanagement [TVWL3BWLISM1] (S. 36), Supply Chain Management [TVWL3BWLISM2] (S. 37)**Learning Control / Examinations**

The total grade for this lecture will consist to 50% of the grade achieved in the written mid term examination, to 10% of the assignments during the exercises, and to 40% of a project work, which includes a term paper and a presentation.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student will become acquainted with the theoretical fundamentals of economic networks and how to manage them. Support of economic networks by information systems will be accomplished by several case studies, which will be worked on by groups autonomously. Basic knowledge of organisation theory, network analysis, strategic & operative management and logic systems will be communicated to the student. Furthermore, he will have a focused view on the mechanisms and supporting tools for interaction between companies, especially in negotiations and negotiation-supporting systems. In small groups, the student is trained in team-oriented and autonomous working techniques. Within this domain, the student will be trained to seek and read relevant technical literature in English, the language of science, and to adopt it to a specific problem.

Content

The significant and lasting impact of web-based business-to-business (B2B) networks has just recently become apparent. The exploratory phase during the first Internet hype bred a variety of approaches which were often bold in business nature, yet simple and unfounded in system architecture. Only very few survived and proved sustainable. Nowadays web-based B2B networks are increasingly reappearing and even promoted by major traditional companies and governments. However, this new wave of networks is more mature and more powerful in functionality than their predecessors. As such they provide not only auction systems but also facilities for electronic negotiation. This implies a shift from price-focused to relationship-oriented trading. But what motivates this shift? Why do firms enter business networks? How can these networks be best supported by IT? The course intends to resolve these questions. Firstly, an introduction in organization theory will be given. Secondly, the problems of networks will be addressed. Thirdly, an analysis of how IT can alleviate those problems will be undertaken.

Media

Powerpoint presentations, recorded lecture available on the internet, (if circumstances allow videoconferencing).

Basic literature

Course: eFinance: Information Engineering and Management for Securities Trading Course key: [26454]

Lecturers: Christof Weinhardt, Ryan Riordan

Credit points (CP): 4.5 **Hours per week:** 2/1

Term: Wintersemester **Level:** 4

Teaching language: Deutsch

Part of the modules: eBusiness and Servicemanagement [TVWL3BWLISM1] (S. 36), eFinance [TVWL3BWLISM3] (S. 38), Topics in Finance I [TVWL3BWLFBV5] (S. 45), Topics in Finance II [TVWL3BWLFBV6] (S. 46)

Learning Control / Examinations

70% of the mark is based on the written examination and 30% is based on assignments during the exercises.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The goal of the lecture is to make the students familiar with the theoretical as well as the practical aspects of electronic trading and exchanges and the IT systems used in the financial industry. While markets for products and services are discussed, the focus is on the trading of financial securities. Existing centralized equity exchanges face competition from new alternative trading systems make possible by today's information technology. This course will also examine the impact and implications of this dynamic. The focus is on the economic and technical design of markets as information processing systems.

Content

The theoretical part of the course examines the New Institutions Economics which provides a theoretically found explanation for the existence of markets and intermediaries. Building upon the foundations of the market micro structure, several key parameters and factors of electronic trading are examined. These insights gained along a structured securities trading process are complemented and verified by the analysis of prototypical trading systems developed at the institute as well as selected trading systems used by leading exchanges in the world. In the more practical-oriented second part of the lecture, speakers from practice will give talks about financial trading systems and link the theoretical findings to real-world systems and applications.

Media

Powerpoint presentations, recorded lecture available on the internet

Course: eServices**Course key: [26466]****Lecturers:** Christof Weinhardt, Gerhard Satzger**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Sommersemester **Level:** 3**Teaching language:** Englisch**Part of the modules:** eBusiness and Servicemanagement [TVWL3BWLISM1] (S. 36), Specialization in Customer Relationship Management [TVWL3BWLISM5] (S. 40)**Learning Control / Examinations**

The assessment consists of a written examination (60 min.) according to Section 4.2.1 of the examination regulation and by submitting written papers as part of the exercise (according to Section 4.2.3 of the examination regulation).

Prerequisites

None.

Conditions

None.

Learning Outcomes

This course conveys the fundamental knowledge to understand the importance of services in our economy and the impact of information and communication technology (ICT) on existing and emerging service industries. Combining theoretical models with multiple case studies and application scenarios, this course will enable students:

- to understand different service perspectives and apply the general concept of “value co-creation”
- to know and to be able to apply concepts, methods and tools used for the design, engineering and management of eServices
- to be familiar with current research topics
- to gain experience in group work and to improve their presentation skills
- to be exposed to English language in preparation for working in international environments

Content

The world is moving more and more towards “service-led” economies: in developed countries services already account for around 70% of gross value added. In order to design, engineer, and manage services, traditional “goods-oriented” models are often inappropriate. In addition, the rapid development of information and communication technology (ICT) pushes the economic importance of services that are rendered electronically (eServices) and, thus, drives competitive changes: increased interaction and individualization open up new dimensions of “value co-creation” between providers and customers; dynamic and scalable service value networks replace static value chains; digital services can be globally delivered and exchanged across today’s geographic boundaries;

Building on a systematic categorization of (e)Services and on the general notion of “value co-creation”, we cover concepts and foundations for engineering and managing IT-based services, allowing for further specialization in subsequent KSRI courses. Topics include service innovation, service economics, service modeling as well as the transformation and coordination of service value networks.

In addition, case studies, hands-on exercises and guest lectures will illustrate the applicability of the concepts. English language is used throughout the course to acquaint students with international environments.

Course: Seminar Service Science, Management & Engineering**Course key: [26470]****Lecturers:** Stefan Tai, Christof Weinhardt, Gerhard Satzger, Rudi Studer**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

See corresponding module information.

ConditionsLecture *eServices* [26466] is recommended.**Learning Outcomes**

Autonomously deal with a special topic in the Service Science, Management and Engineering field adhering to scientific standards.

Content

Each Semester, the seminar will cover topics from a different selected subfield of Service Science, Management & Engineering. Topics include service innovation, service economics, service computing, transformation and coordination of service value networks as well as collaboration for knowledge intensive services.

See the KSRI website for more information about this seminar: <http://www.ksri.kit.edu>**Basic literature**

The student will receive the necessary literature for his research topic.

Course: Special Topics in Information Engineering & Management **Course key: [26478]**

Lecturers: Christof Weinhardt

Credit points (CP): 4.5 **Hours per week:** 3

Term: Winter-/Sommersemester **Level:** 4

Teaching language: Deutsch

Part of the modules: eBusiness and Servicemanagement [TVWL3BWLISM1] (S. 36)

Learning Control / Examinations

The student is evaluated based on the written and practical work, a presentation of the results in front of an audience and his contribution to the discussion.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student should be able to do a literature review based on a predefined topic in the context of information engineering and management. The approach comprises the identification of relevant literature according to the topic and an analysis as well as an evaluation of the methods presented in the literature. The practical work components should enable the student to learn and independently use scientific methods employed e.g. in case studies or experiments.

The student learns to present his results in a paper and in front of an audience on an academic level. This process is helpful for further scientific work like the master or doctoral thesis.

Content

In this course the student should learn to apply the search methods to a predefined topic area. The topics are based on research questions in Information Engineering and Management across different industry sectors. This problem analysis requires a interdisciplinary examination. Experiments, case studies or software development can be part of the practical work that offers the students an opportunity to get a deeper insight into the field of Information Engineering and Management. The course also encompasses a documentation of the implemented work.

Media

- Power Point
- eLearning Plattform Ilias
- Software tools for development , if needed

Basic literature

The basic literature will be made available to the student according to the respective topic.

Remarks

All the practical seminars offered at the chair of Prof. Dr. Weinhardt can be chosen in the Special Topics in Information Engineering & Management course. The current topics of the practical seminars are available at the following homepage: www.iism.kit.edu/im/lehre

Course: Management of Business Networks (Introduction)**Course key: [26496]****Lecturers:** Christof Weinhardt, Jan Kraemer**Credit points (CP):** 3 **Hours per week:** ???**Term:** Wintersemester **Level:** 3**Teaching language:** Englisch**Part of the modules:** Supply Chain Management [TVWL3BWLISM2] (S. 37)**Learning Control / Examinations**

The assessment consists of a written examination (60 min) according to Section 4(2), 1 of the examination regulation and by submitting written papers as part of the exercise according to section 4(2), 3 of the examination regulation. Grading: Exam counts for 85 % , exercises for 15 %.

Remarks

This Version of the MBN Course does not include the case study in the second part of the lecture, so that it is worth less credits. The lecture was first offered in the winter term of 2009/10.

Course: Customer Relationship Management**Course key: [26508]****Lecturers:** Andreas Geyer-Schulz**Credit points (CP):** 4,5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 4**Teaching language:** Englisch**Part of the modules:** CRM and Service Management [TVWL3BWLISM4] (S. 39)**Learning Control / Examinations**

Assessment consists of a written exam of 1 hour length following §4 (2), 1 of the examination regulation and by submitting written papers as part of the exercise following §4 (2), 3 of the examination regulation.

The course is considered successfully taken, if at least 50 out of 100 points are acquired in the written exam. In this case, all additional points (up to 12) from exercise work will be added. The grades of this lecture are assigned following the table below:

Grade	Minimum points
1.0	104
1.3	98
1.7	92
2.0	86
2.3	80
2.7	74
3.0	68
3.3	62
3.7	56
4.0	50
4.7	40
5.0	0

Prerequisites

None.

Conditions

None.

Learning Outcomes

The students

- understand service management as an economic basis for Customer Relationship Management and learn the resulting consequences for the management, the organisation itself and their departments,
- design and develop service concepts and service systems at a conceptual level,
- work on case studies in the CRM-area in small groups with limit time,
- learn English as the technical language in the area of CRM and consult internationale literature from this field for the case studies.

Content

The course begins with an introduction into Service Management as the strategic concepts which also covers all CRM applications. The course is divided in the basics of Service Management as well as different topics within this concept like external and internal marketing, quality management and organizational requirements.

3.3	62
3.7	56
4.0	50
4.7	40
5.0	0

Prerequisites

None.

Conditions

The attendance of courses *Customer Relationship Management* [26508] and *Analytical CRM* [26522] is advised.

Learning Outcomes

The Student

- understands the theory of methods for process and data analyses and applies them for the design and implementation of operative CRM-processes in the complex context of companies,
- takes privacy problems into account,
- evaluates existing operative CRM-processes in companies and gives recommendation for their improvement. This requires the knowledge of example processes and the ability to transform them according to the given setting.
- uses literature for the solution of case studies, communicates with professionals and summarizes his recommendations and drafts in precise and coherent texts.

Content

The Student should be able to understand and implement methods and applications within the operative CRM. This includes, but is not limited to the analysis of business processes, as a basis for improvements in CRM, and applications like call centers.

2.7	74
3.0	68
3.3	62
3.7	56
4.0	50
4.7	40
5.0	0

Prerequisites

None.

Conditions

We expect knowledge about data models and the UML modelling language concerning information systems.

Learning Outcomes

The Student should

- understand the principal scientific methods from statistics and informatics used in analytical CRM and their application to enterprise decision problems and be able to independently apply these methods to standard cases,
- understand the components for creating and managing a data warehouse from operative system sources including the processes and steps involved and should be able to apply these methods to a simple example, and
- use his knowledge to conduct a standard CRM analysis on enterprise data for a business decision problem and deduce and justify a recommendation for appropriate action.

Content

The course Analytical CRM deals with methods and techniques for analysis concerning the management and improvement of customer relationships. Knowledge about customers is aggregated and used for enterprise decision problems like product line planning, customer loyalty, etc. A necessary precondition for these analyses is the transformation of data stemming from operative systems into a common data warehouse that assembles all necessary information. This requires transformation of data models and processes for creating and managing a data warehouse, like ETL processes, data quality and monitoring. The generation of customer oriented and flexible reports for different business purposes is covered. The course finally treats several different statistical analysis methods like clustering, regression etc. that are necessary for generating important indicators (like customer lifetime value, customer segmentation).

Course key:

Lecturers: Andreas Geyer-Schulz

Credit points (CP): 3 **Hours per week:** 2

Term: Winter-/Sommersemester **Level:** 3

Teaching language: Deutsch

Part of the modules: Seminar Module [TVWL3SEM] (S. 76)

Learning Control / Examinations

Prerequisites

See corresponding module description. Furthermore, knowledge from CRM is required. Therefore, the lecture *Customer Relationship Management* [26508] (or a similar one) has to be attended parallel or before the seminar.

Conditions

None.

Learning Outcomes

The student is able to

- to perform a literature search for a given topic, to identify, find, value and evaluate the relevant literature.
- to write his seminar thesis (and later on, the bachelors/masters thesis) with the text setting system LaTeX and include format requirements as used by scientific publishers.
- to do a presentation in an adequate scientific manner.
- to write down the results of his investigations in the form of scientific publications.

Content

This seminar serves as an introduction into the process of scientific work. Students write a review for a selected scientific article. A profound literature search is required to judge the article. The review is written with LaTeX by using formatting styles similar to those of scientific publishers.

The seminar treats questions of Customer Relationship Management.

Basic literature

A CRM-specific article is assigned to every student participating in this seminar. The chosen articles are published in the beginning of every term.

None.

Conditions

None.

Learning Outcomes

The objective of the Derivatives lecture is to become familiar with financial markets, especially derivatives markets. Traded securities and frequently used trading strategies will be introduced. Furthermore the pricing of derivatives will be derived and their use in risk management will be discussed.

Content

The lecture deals with the application areas and valuation of financial derivatives. After an overview of the most important derivatives and their relevance, forwards and futures are analysed. Then, an introduction to the Option Pricing Theory follows. The main emphasis is on option valuation in discrete and continuous time models. Finally, construction and usage of derivatives are discussed, e.g. in the context of risk management.

Conditions

None.

Learning Outcomes

The objective of this course is to become familiar with the basics of investment decisions on international markets and to manage foreign exchange risks.

Content

The main aspects of this course are the chances and the risks which are associated with international transactions. We carry out our analysis from two distinct perspectives: First the point of view of an international investor second that, of an international corporation. Several alternatives to the management of foreign exchange risks are shown. Due to the importance of foreign exchange risks, the first part of the course deals with currency markets. Furthermore current exchange rate theories are discussed.

The assessment consists of a written exam (75 min) according to Section 4(2), 1 of the examination regulation.

The examination takes place in every semester. Re-examinations are offered at every ordinary examination date.

By submitting the exercises (according to Section 4(2), 3 of the examination regulation) up to 4 bonus points can be acquired.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The objective of this course is to become familiar with the basics of investment decisions on stock, bond, and derivatives markets. For that basic economic concepts and models are discussed and applied on an introductory level. Interlinkages between markets, different decision-making concepts and models are demonstrated.

Content

The lecture deals with investment decisions under uncertainty, where the main emphasis is on investment decisions on stock markets. After a discussion of the basic questions of corporate valuation, the lecture focuses on portfolio theory. After that, risk and return in equilibrium are derived using the Capital Asset Pricing Model and the Arbitrage Pricing Theory, followed by an introduction into derivatives markets, especially forwards and futures. The lecture concludes with investments on bond markets.

Course: Energy efficient intralogistic systems**Course key: [2117500]****Lecturers:** Schöning**Credit points (CP):** 4 **Hours per week:** 2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))**Learning Control / Examinations**

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

None.

Conditions

Knowledge of Electrical Engineering and Technical Mechanics is recommended.

Learning Outcomes

The lecture provides basics for the analysis and the design of energy and resource efficient intralogistic systems for production and distribution.

Content

The main focuses of the course are:

- processes in Intralogistic systems
- evaluation of energy consumption of conveyors
- modeling of conveying systems
- methods for energy savings
- approaches for energy efficiency increasing of continuous and discontinuous conveyors
- dimensioning energy efficient drives
- new approaches for resource efficient conveying systems.

Course: Technical Logistics I**Course key: [2117501]****Lecturers:** Martin Mittwollen**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))**Learning Control / Examinations**

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

Technical understanding is recommended.

Conditions

None.

Learning Outcomes

In this course, processes and machines of technical logistics are explained. The fundamental structures and the mode of operation are handled intensively. References to industrially used machines are constantly manufactured. Guest lectures give an idea of implemented machines and plants.

Content

- Basics
- A model of material handling systems
- Elements for changing places and positions
- Processes of technical logistics
- Drives (energy transfer, transfer components, characteristic curves, control and regulation)
- Operating of material handling machines
- Construction and functionality of selected material flow elements (storage and retrieval machine, joins, branches, crane, automatically guided vehicle, etc.)

Course: Logistics - Organisation, Design, and Control of Logistic Systems Course key: [2118078]

Lecturers: Kai Furmans

Credit points (CP): 6 **Hours per week:** 3/1

Term: Sommersemester **Level:** 3

Teaching language: Deutsch

Part of the modules: Supply Chain Management [TVWL3BWLISM2] (S. 37)

Learning Control / Examinations

The assessment consists of a written exam according to Section 4 (2), 1 of the examination regulation. The grade of the exam may be improved by passing case studies.

Prerequisites

Required are lectures on "Linear Algebra" and "Stochastic".

Conditions

None.

Learning Outcomes

After successfully finishing this course, the student is able to plan simple material handling and logistic systems and is able to assign the right models to a certain task. He is able to evaluate the performance of the most important elements of material handling and logistic systems.

Content

Introduction

- historical overview
- lines of development

Structure of logistics systems

Distribution logistics

- location planning
- Vehicle Routing Planning
- distribution centers

Inventory management

- demand forecasting
- Inventory management policies
- Bullwhip effect

Production logistics

- layout planning
- material handling
- flow control

Supply Management

- information flow
- transportation organization
- controlling and development of a logistics system
- co-operation mechanisms
- Lean SCM
- SCOR model

Identification Technologies

Media

Blackboard, LCD projector, in exercises also PCs.

Complementary literature

Remarks

Formerly, the course was known as *Logistics*.

Course: Automotive Logistics**Course key: [2118085]****Lecturers:** Kai Furmans**Credit points (CP):** 4 **Hours per week:** 2**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))**Learning Control / Examinations**

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

None.

Conditions

None.

Learning Outcomes

It is the aim of the course to show the importance and impact of logistic questions in the automotive industry sector.

Content

A basic model of the automobile production and distribution is used to study the main elements of the automotive supply chain:

- Supply side logistics (Tasks due to disposition and physical accomplishment; methods; solution models)
- Car manufacturing with the specific questions of the interaction of body shell, paint shop and assembly (sequence planning; partial allocation for assembly)
- Car distribution and the connection to sale processes (physical accomplishment; planning and control)

Course: Industrial Application of Material Handling Systems in Sorting and Distribution Systems

Course key: [2118089]

Lecturers: Föller

Credit points (CP): 4 **Hours per week:** 2

Term: Sommersemester **Level:** 4

Teaching language: Deutsch

Part of the modules: Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))

Learning Control / Examinations

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The course provides basics of sorting techniques.

Content

- Operation characteristics, classification, configuration, dimensioning, cost consideration, sorting systems
- Relevant regulations, modern control and drive concepts

Course: Quantitative Methods for Supply Chain Risk Management Course key: [2118090]

Lecturers: Cardeneo

Credit points (CP): 6 **Hours per week:** 3/1

Term: Sommersemester **Level:** 4

Teaching language: Deutsch

Part of the modules: Supply Chain Management [TVWL3BWLISM2] (S. [37](#))

Learning Control / Examinations

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

Knowledge in Logistics and Operations Research are recommended (linear and mixed integer optimization, simple graph theory, and basic knowledge of statistics).

Conditions

None.

Learning Outcomes

The student

- identifies, analyzes and assigns risks of logistic systems
- plans location and transport decisions under uncertainty
- knows risk-relevant elements and knows adequate countermeasures for planning processes (regarding procurement, demand, infrastructure, continuity management)

Content

The planning and the operation of logistics systems are strongly connected with uncertainty: It is the unknown demand, varying transportation times, unexpected delays, irregularly production yield or volatile rates of exchange: Quantities, times, qualities and prices are uncertain values. Therefore it is necessary to deal with particular these uncertain values to avoid negative effects . In this lecture we mostly work with mathematical models and methods to control the various kinds of risks.

Basic literature

Will be announced in the lecture.

Course: Information Systems and Supply Chain Management**Course key: [2118094]****Lecturers:** Kilger**Credit points (CP):** 4 **Hours per week:** 2**Term:** Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))**Learning Control / Examinations**

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

Technical understanding is required. It is recommended to attend the lecture *Logistics - Organisation, Design, and Control of Logistic Systems*.

Conditions

None.

Learning Outcomes

Basic knowledge of information systems for logistics processes will be delivered and the students should be able to identify the requirements of a supply chain and choose an appropriate information system.

Content

1. Overview of logistics systems and processes
2. Basic concepts of information systems and information technology
3. Introduction to IS in logistics: Overview and applications
4. Detailed discussion of selected SAP modules for logistics support

Complementary literature

Stadtler, Kilger: Supply Chain Management and Advanced Planning, Springer, 4. Auflage 2008

Course: Warehouse and Distribution Systems**Course key: [2118097]****Lecturers:** Kai Furmans**Credit points (CP):** 4 **Hours per week:** 2**Term:** Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Introduction to Technical Logistics [TVWL3INGMB13] (S. [57](#))**Learning Control / Examinations**

The assessment consists of an oral exam according to §4 (2), 2 of the examination regulation. It may be a written exam (according to §4 (2), 1 of the examination regulation) in the case of large number of participants.

Prerequisites

None.

Conditions

None.

Learning Outcomes

This course provides basics to understand material and information processes in warehouse and distribution systems. The student will also learn to evaluate them quantitatively.

Content

- Control and organisation of distribution centers
- Analytical models for analysing and dimensioning of warehouse systems
- Distribution Center Reference Model (DCRM)
- Lean Distribution
- The processes from receiving to shipping
- Planning and controlling
- Distribution networks

Course: Efficient Creativity - Processes and Methods within the Automotive Industry

Course: Power Network Analysis**Course key: [23371/23373]****Lecturers:** Thomas Leibfried**Credit points (CP):** 6 **Hours per week:** 2/2**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Electrical Power Engineering [TVWL3INGETIT1] (S. 63)**Learning Control / Examinations**

The assessment consists of a written exam (120 min) taking place at the beginn of the recess period (according to Section 4 (2), 1 of the examination regulation). The exam takes place in every winter semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

This course is obligatory within the module and has to be attended.

Learning Outcomes

The goal is to relay theoretical fundamentals in the field of electric power technology and power transmission.

In the first part the lecture deals with the basics of High-Voltage technology. Then the basics of transmission and distribution of electric energy is presented as well as the load flow calculation and the short-circuit calculation methods.

Supporting the lecture, assignments to the curriculum are distributed. Their solution is presented and discussed during lecture hall exercises.

Content

In its first part, this lecture introduces the High-Voltage technology and its basics. Especially, the reasons for the necessity for the power transmission with high voltages are given. Basic electrical configurations and stresses occurring at multi dielectric systems are presented. Finally the first chapter deals with discharge phenomena.

The second chapter deals with the three phase system. Especially, the mathematical treatment of three phase systems and the introduction of component systems are contained in this chapter.

The third and very comprehensive chapter deals with the transmission and distribution of electric energy. Firstly, the laws of power transmission via transmission lines are presented. Then, the stability of electric power systems and possibilities to increase the power transmission capacity are discussed. Finally, the physics of energy distribution in the medium and low voltage grid is shown.

The fourth chapter deals with the Calculation of electric power networks and systems. Firstly, the preparatory steps for the calculation of the power network are shown. After discussing the basic network analysis methods, the load flow calculation are shown. Especially, the method of current iteration and the Newton Raphson method are presented and the algorithms of the individual methods are shown using an example.

The fifth chapter deals with methods for the calculation of the 3 phase short circuit. Thereby, it is distinguished between the short circuit nearby the generator and far from the generator.

In the sixth chapter the unsymmetrical faults in power networks and their calculation are discussed. Therefore, the symmetrical components are introduced as a first step. Then, the circuits in symmetrical components of all important power network equipment are presented. The chapter closes with the mathematical treatment of unsymmetrical short circuits using the symmetrical component method.

To accompany the lecture, a collection of problems can be downloaded. During lecture hall exercises their solutions will be discussed.

Media

Online material is available on: www.ieh.uni-karlsruhe.de and can be downloaded using a password.

Complementary literature

Will be announced in the lecture notes.

Remarks

The course was formerly known as *Electric Power System Engineering I*.

Course: Systems for Electrical Energy

Course key: [23391/23393]

Lecturers: Thomas Leibfried

Credit points (CP): 4,5 **Hours per week:** 2/1

Term: Sommersemester **Level:** 3

Teaching language: Deutsch

Part of the modules: Electrical Power Engineering [TVWL3INGETIT1] (S. 63)

Learning Control / Examinations

The assessment consists of a written exam (120 min) taking place at the beginning of the recess period (according to Section 4 (2), 1 of the examination regulation). The exam takes place in every summer semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

For a successful participation knowledge of the content of the course *Higher mathematics* and especially of complex computation is assumed.

Conditions

The course is an obligatory course within the module and has to be attended.

Learning Outcomes

The goal is to relay theoretical fundamentals in the field of electrical network analysis and in the field of electrical power networks.

In the first part the lecture deals with the calculation of transients in linear electrical networks using differential equations and the Laplace transform. In the second part of the lecture the electrical power network equipment is described.

Supporting the lecture, assignments to the curriculum are distributed. Their solution is presented and discussed during lecture hall exercises.

Content

In its first part, this lecture is a consequent continuation of the calculation of electrical networks as it is presented in the lecture "Linear electrical networks". In the second part of this lecture, the basics of electric power network equipment are presented. This is the basis for all further lectures of power system technology.

The first chapter gives an introduction in the single phase and three phase AC system.

The second chapter deals with or is a repetition of electromagnetic basics. In a first step magnetic circuits and their calculation is treated. Then are subjects like main flux and stray flux are introduced, as well as self induction main inductance and stray inductance. The induction law leads directly to the transformer and the calculation of inductances and finally to the calculation of forces caused by a current flowing in a conduction which is located within a magnetic field.

The third and very comprehensive chapter deals with the mathematical description of electrical networks. Hereby, it is distinguished between networks with concentrated elements and networks with distributed elements. The calculation of networks with concentrated elements leads to differential equations with constant coefficients. Their solution as well as a special case, the sinusoidal excitation of such networks, is comprehensively demonstrated using examples. Finally, the description of electrical networks by a system of first order differential equations is shown and their solution is presented. Circuits with distributed elements are transmission lines. The transmission line theory for sinusoidal voltages and currents as well as for impulse voltages and currents is shown.

The fourth chapter deals with the Laplace Transform as a tool for electrical network analysis. First, the Duhamel integral (convolution integral) is presented. Then the Laplace Transform is derived out of the convolution integral and in a further sub-chapter the solution of differential equations using the Laplace Transform is demonstrated.

The fifth chapter deals with methods for network analysis. It demonstrates the mesh analysis, the nodal analysis, the superposition theorem, Norton's theorem, Thevenin's theorem and the Tellegen-Theorem. These formal methods are demonstrated using two examples circuits. These circuits are transistor amplifier with and without a transformer. This allows the calculation of networks with voltage or current dependent sources.

In the sixth chapter the structure of the electric power network is shown and explained.

The seventh chapter deals with power network equipment. Thereby, their steady state behaviour in the power network as well as their electrical and mechanical basic design is presented. The chapter contains synchronous generators, power transformers, reactors, capacitors, transmission lines and switch gear. For all of this power network equipment its steady state electrical circuit is derived. This gives the basis for all further lectures in the field of power network engineering.

To accompany the lecture, a collection of problems can be downloaded. During lecture hall exercises their solutions will be discussed.

The course comprises of the interleaved lecture blocks and exercises. Current information can be found on the IEH webpage (www.ieh.uni-karlsruhe.de).

Media

Online material is available on: www.ieh.uni-karlsruhe.de and can be downloaded using a password.

Complementary literature

Will be announced in the lecture notes.

Remarks

From the summer term 2010 on, the course will be held in the summer term and reduced to 4.5 CP.

Course: Trademark and Unfair Competition Law**Course key: [24136/24609]****Lecturers:** Yvonne Matz, Peter Sester**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Intellectual Property Law [TVWL3JURA4] (S. [71](#))**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes

It is the aim of this course to provide students with knowledge in the area of trademark rights in the national as well as the European and International context. The course deals with the structure of trademark rights, especially with the procedures of registration and the claims, that result from the infringements of trademark rights, as well as with the right of other marks in the MarkenG.

Content

The course deals with the subject matter of trademark rights: what is a trademark, how can I get the registration of a trademark, what rights and claims do owner of trademarks have, which other marks do exist? The students shall learn about the rules of national, European an international trademark law.

Basic literature

- Berlitz, Wolfgang: Markenrecht, Verlag C.H.Beck, ISBN 3-406-53782-0, neueste Auflage.

Course: Exercises in Civil Law**Course key: [24506/24017]****Lecturers:** Peter Sester, Thomas Dreier**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Winter-/Sommersemester **Level:** 1**Teaching language:** Deutsch**Part of the modules:** Commercial Law [TVWL3JURA2] (S. 70)**Learning Control / Examinations**

Assessment will consist of five written exams following §4, Abs. 2, 3 of the SPO. At least two exams have to be passed, to pass the course. The final grade is calculated as the median of the two exams that have been passed with the best grades.

Prerequisites

Students must have attended the course *Civil Law for Beginners* [24012] or a comparable introduction into (German) civil law. It is highly recommended that students have likewise attended the courses *Advanced Civil Law* [24504] and *Commercial and Corporation Law* [24011].

Conditions

None.

Learning Outcomes

It is the aim of this course to enable students to solve legal cases by way of the appropriate legal technique (so-called Subsumtion). At the same time, the legal knowledge which students have acquired in the courses "Civil Law for Beginners", "Advanced Civil Law" and "Commercial and Corporation Law" will be repeated and deepened. This shall enable students to solve practical legal problems in a methodologically correct way.

Content

In 5 sessions the substantive law which students have been taught in the courses "Civil Law for Beginners", "Advanced Civil Law" and "Commercial and Corporation Law" will be repeated and the method for solving legal cases deepened. Moreover, 5 sessions are reserved to written exam problems which cover the totality of what students have learned so far. Additional sessions are reserved for the subsequent in-class discussion of the exam problems.

Course: Service Oriented Computing 1**Course key: [25770]****Lecturers:** Stefan Tai**Credit points (CP):** 5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Emphasis Informatics [TVWL3INFO1] (S. [51](#)), Electives in Informatic [TVWL3INFO2] (S. [52](#))**Learning Control / Examinations**

The assessment of this course is a written examination (60min.) in the first week after lecture period (nach §4(2), 1 SPO).

Prerequisites

Lecture A/2 [25033] is recommended.

Conditions

None.

Learning Outcomes

The course introduces concepts, methods, and techniques of “service-oriented computing”, including languages for (Web) service description, methods and tools for the development of services, and platforms (middleware, runtimes) for the Web-based deployment, delivery, and execution of services. The course provides a solid technical foundation that enables the student to address the increasingly relevant challenges of developing “service-oriented architectures (SOA)” in the industry.

Content

Web services represent the next-generation of Web technology, and are an evolution of conventional distributed middleware. They enable new and improved ways for enterprise computing, including application interoperability and integration, and business process management. Modern software systems are being designed as service-oriented architectures (SOA), introducing increased agility and flexibility at both the software systems and the business level. Web services and SOA thus have a profound impact on software development and the businesses that they support. The course “Service-oriented Computing” introduces the concepts, methods and technology that provide a solid foundation in this area. Topics include:

- Service description
- Service engineering, including development and implementation
- Service composition (aggregation), including process-based service orchestration
- Interoperability formats and protocols
- Service platforms and runtimes (middleware)

Media

Slides, access to internet resources.

Basic literature

Will be announced in the lecture.

Course: Seminar: Management and Organization**Course key: [25915/25916]****Lecturers:** Hagen Lindstädt**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations**

Term paper (50%) and presentation (50%).

Prerequisites

See corresponding module information.

Conditions

None.

Learning Outcomes

The aim of the seminar is to describe corporate and organisational management approaches, to assess them critically and clarify them using practical examples. The focus is on assessing the models with a view to their applicability and theoretical limits.

Content

The subjects are redefined each semester on the basis of current issues.

Media

Slides.

Course: Real Estate Management I**Course key: [26400w]****Lecturers:** Thomas Lützkendorf**Credit points (CP):** 4,5 **Hours per week:** 2/2**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Real Estate Management [TVWL3BWLOOW2] (S. 35)**Learning Control / Examinations**

The assessment consists of a written exam (60 min) or an oral exam (20 min.) according to Section 4 (2), 1 or 2 of the examination regulation.

The exam takes place twice at every winter-semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

A combination with the module *Design Construction and Assessment of Green Buildings I* [TVWL3BWLOOW1] is recommended. Furthermore it is recommended to choose courses of the following fields

- Finance and Banking
- Insurance
- Civil Engineering and Architecture (building physics, structural design, facility management)

Conditions

None.

Learning Outcomes

Application of economic methods to the fields of real estate economics and sustainable construction.

Content

The course Real Estate Management I deals with questions concerning the economy of a single building throughout its lifecycle. Among other topics this includes project development, location and market studies, german federal building codes as well as finance and assessment of economic efficiency.

The tutorial recesses the contents of the course by means of practical examples and, in addition to that, goes into the possible use of software tools.

Media

Presentation slides and supplementary material is provided partly as printout, partly online for download.

Remarks

The course is replenished by excursions and guest lectures by practitioners out of the real estate business.

Course: Design, Construction and Assessment of Green Buildings I Course key: [26404w]

Lecturers: Thomas Lützkendorf

Credit points (CP): 4,5 **Hours per week:** 2/1

Term: Wintersemester **Level:** 3

Teaching language: Deutsch

Part of the modules: Sustainable Construction [TVWL3BWLOOW1] (S. [34](#))

Learning Control / Examinations

The assessment consists of an oral exam (20 min.) according to Section 4 (2), 2 of the examination regulation.

The oral exam takes place at every semester. Re-examinations are offered at every ordinary examination date.

Prerequisites

None.

Conditions

A combination with the module *Real Estate Management* [TVWL3BWL001] and with engineering science modules in the area of building physics and structural design is recommended.

Learning Outcomes

Knowledge in the area of sustainable construction concerning whole buildings, building components, equipment and appliances as well as building material.

Content

Taking low-energy buildings as an example the course is an introduction to cheap, energy-efficient, resource-saving and health-supporting design, construction and operation of buildings. Questions of the implementation of the principles of a sustainable development within the building sector are discussed on the levels of the whole building, its components, building equipment as well as the materials. Besides technical interrelationships basics dimensioning and various approaches to ecological and economical assessment play a role during the lectures, as well as the different roles of people involved into the building process. Topics are the integration of economical and ecological aspects into the design process, strategies of energy supply, low-energy and passive buildings, active and passive use of solar energy, selection and assessment of construction details, selection and assessment of insulation materials, greened roofs plus health and comfort.

Media

For a better clearness videos and simulation tools will be presented during the lectures.

Will be announced in the respective course.

Course: Seminar in Enterprise Information Systems**Course key: [SemAIFB1]****Lecturers:** Rudi Studer, Andreas Oberweis, Wolffried Stucky, Thomas Wolf, Ralf Kneuper**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

The assessment of this course is according to §4(2), 3 SPO in form of an examination of the written seminar thesis and a presentation.

The final mark is based on the examination of the written seminar thesis but can be upgraded or downgraded according to the quality of the presentation.

The seminar is for bachelor as well as master students. The differentiation will be made by selection of different topics and different standards of evaluation.

Prerequisites

See corresponding module information.

Conditions

None.

Learning Outcomes

Students are able to

- do literature search based on a given topic: identify relevant literature, find, assess and evaluate this literature.
- write the seminar thesis (and later the Bachelor-/Masterthesis) with a minimal learning curve by using format requirements such as those recommended by well-known publishers.
- give presentations in a scientific context in front of an auditorium. These techniques are presented and learned during the seminar.
- present results of the research in written form generally found in scientific publications.

Content

The seminar intensifies and extends specific topics which are discussed within corresponding lectures. Knowledge of these lecture topics is an advantage but not a precondition.

Specific titles and the topics of offered seminars will be announced before the start of a semester in the internet at <http://www.aifb.uni-karlsruhe.de/Lehre>

Basic literature

Literature will be given individually in the specific seminar.

Course: Seminar Efficient Algorithms**Course key: [SemAIFB2]****Lecturers:** Hartmut Schmeck**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

See corresponding module information.

Conditions

None.

Learning Outcomes**Content****Basic literature**

Will be announced at the beginning of the semester.

Course: Seminar Complexity Management**Course key: [SemAIFB3]****Lecturers:** Detlef Seese**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations**

see German part

Prerequisites

See corresponding module information.

Conditions

None.

Learning Outcomes

see German part

Content

see German part

Basic literature

Will be announced in the lecture.

Remarks

The number of participants is limited. Please take notice about the inscription procedure at the institutes website. Specific titles and the topics of offered seminars will be announced before the start of a semester in the internet at <http://www.aifb.uni-karlsruhe.de/Lehre>.

Course: Seminar Knowledge Management**Course key: [SemAIFB4]****Lecturers:** Rudi Studer**Credit points (CP):** 3 **Hours per week:** 2**Term:** Wintersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

The success monitoring is done through a presentation about a research topic from the current topic of the seminar (45-60 minutes) followed by a discussion, a written summary of the main points (approx. 15 pages) and of active participation in discussions (in accordance with §4(2),3 SPO).

The total mark is composed of the graded and weighted success controls (50% lecture, 30% written paper, and 20% participation and discussion).

The seminar can be attended by both bachelor and master students. A differentiation is made by different topic assignment and evaluation standards for seminar paper and presentation.

Prerequisites

See module description.

Conditions

None.

Learning Outcomes

The students will learn to perform literature searches on current topics in computer science as well as preparing and presenting the contents of scientific publications.

During the work on the seminar topics the master students will deepen their skills to autonomously comprehend current scientific knowledge and to convey it to others through oral presentations and written summaries.

Through active participation in the seminar, students acquire skills in critical appraisal of research topics and in oral and written presentation of independently developed research content.

Content

Each year, the seminar will cover topics from a different selected subfield of knowledge management, e.g.:

- Ontology-based knowledge management,
- Information Retrieval and Text Mining,
- Data Mining,
- Personal Knowledge Management,
- Case Based Reasoning (CBR),
- Collaboration and Social Computing.

Media

Complementary literature

None.

Remarks

The number of students is limited. Students have to observe the designated registration process.

Course: Seminar in Insurance Management**Course key: [SemFBV1]****Lecturers:** Ute Werner**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

30 min. oral presentation incl. discussion, written report of 10 pages, and active engagement in discussion and working groups (according to §4(2), 3 SPO).

The grading consists of the weighted performance of the works performed (oral presentation 40%, written report 40%, active engagement 20%).

Prerequisites

See corresponding module information.

Conditions

The seminar is held within the courses of *Insurance Management* [TVWL3BWLFBV4] and [WW4BWLFBV6/7], respectively, but with special forms of working.

A course taken as a seminar cannot be chosen as a part of a course module (and vice versa).

The seminar is well-suitable in combination with the bachelor modules *Risk and Insurance Management* [TVWL3BWLFBV3] and *Insurance Management* [TVWL3BWLFBV4] as well as to the master modules *Insurance Management I* [WW4BWLFBV6] and *Insurance Management II* [WW4BWLFBV7]. These modules, though, are not required to be taken.

Learning Outcomes

See German version.

Content

The seminar is offered within the following courses:

- Insurance Marketing
- Insurance Production
- Service Management

For their contents refer to the information given at the referring pages.

Basic literature

Will be announced at the beginning of the lecture period.

Remarks

This course is offered irregularly. For further information, see: <http://insurance.fbv.uni-karlsruhe.de>

To attend the course please register at the secretariat of the chair of insurance science.

Course: Seminar in Operational Risk Management**Course key: [SemFBV2]****Lecturers:** Ute Werner**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

30 min. oral presentation incl. discussion, written report of 10 pages, and active engagement in discussion and working groups (according to §4(2), 3 SPO).

The grading consists of the weighted performance of the works performed (oral presentation 40%, written report 40%, active engagement 20%).

Prerequisites

See corresponding module information.

Conditions

The seminar is held within the courses of *Operational Risk Management I/II* [WW4BWLFBV8/9] but with special forms of working. A course taken as a seminar cannot be chosen as a part of a course module (and vice versa).

The seminar is well-suitable in combination with the bachelor module *Risk and Insurance Management* [TVWL3BWLFBV3] as well as to the master modules *Operational Risk Management I* [WW4BWLFBV8] and *Operational Risk Management II* [WW4BWLFBV9]. These modules, though, are not required to be taken.

Learning Outcomes

See German version.

Content

The seminar is offered within the following courses:

- Enterprise Risk Management
- Multidisciplinary Risk Research
- Risk Communication
- Risk Management of Microfinance and Private Households
- Project Work in Risk Research

For their contents refer to the information given at the referring pages.

Basic literature

Will be announced at the end of the recess period.

Remarks

This course is offered irregularly. For further information, see: <http://insurance.fbv.uni-karlsruhe.de>

To attend the course please register at the secretariat of the chair of insurance science.

Course: Seminar in Risk Theory and Actuarial Science**Course key: [SemFBV3]****Lecturers:** Christian Hipp, N.N.**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

See corresponding module information.

Conditions

Knowledge of statistics and actuary science is an advantage.

The seminar is a good addition to the Bachelor module *Calculation and Control* [TVWL3BWLFBV2] and to the Master modules *Applications of Actuarial Sciences I/II* [WW4BWLFBV4/5] and *Insurance Statistics* [WW4BWLFBV8]. However these modules are not a prerequisite for the participation in the seminar.

Learning Outcomes**Content****Basic literature**

Will be announced at the end of the recess period.

Course: Seminar Conveying Technology and Logistics**Course key: [SemIFL]****Lecturers:** Kai Furmans**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** ???**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations**

Participation during the information presentation. The performance review is based on the written paper and the two presentations. Active participation during the presentations is required.

Prerequisites

None.

Conditions

None.

Learning Outcomes

The student gets an opportunity to learn how to work academically. By delving into a scientific topic the student learns to do research and to argue specially in logistics and material handling. Through the presentation of his work the student will learn technical basics of presentation and basics of academic argumentation. Also rhetorical competence will be acquired.

Content

The topics of the seminar will be published under <http://www.ifl.uni-karlsruhe.de/seminare.php> one semester before. To participate it is necessary to sign in the semester before.

Course: Seminar in Ergonomics**Course key: [SemIIP]****Lecturers:** Peter Knauth, Dorothee Karl**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

See corresponding module information.

Conditions

None.

Learning Outcomes**Content****Basic literature**

Will be announced at the end of the recess period.

Course: Seminar in Industrial Production**Course key: [SemIIP2]****Lecturers:** Frank Schultmann, Magnus Fröhling, Michael Hiete**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

Assessment acc. to §4 (2), No.3 ER by assessing the written seminar thesis (approx. 20 pages), the oral presentation and active participation in public discussions. The final grade will be formed by weighing the individual assessment grades.

Prerequisites

Students should have completed the modules „Industrial Production I“ [TVWL3BWLIP], „Industrial Production II“ [WW4BWLIP2] and/or „Industrial Production III“ [WW3BWLIP6].

Conditions

None.

Learning Outcomes

Students shall gain insights into selected research projects of the Institute of Industrial Production (IIP).

- Students shall search for, identify, review and evaluate relevant literature.
- Students shall prepare their seminar thesis (and later on bachelor/master thesis) with a minimum expense in becoming acquainted with their topic and general layout.
- Students shall produce an oral presentation in a scientific context by using the outlined techniques of scientific presentation.
- Students shall learn to present their written results in an adequate form for scientific publishing.

Students in M.Sc. studies will have to put special emphasis on a critical discussion and evaluation of their topic, since they will have to look into actual scientific results in the field of industrial production.

Content

This seminar covers actual topics of industrial production, logistics, environmental science, project management and similar fields. We recommend a successful attendance of previous IIP modules (not compulsory!).

Actual topics covered in this seminar will be published before the start of semester.

Course: Seminar in Engineering Science**Course key: [SemING]****Lecturers:** Fachvertreter ingenieurwissenschaftlicher Fakultäten**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes**Content****Basic literature**

Will be announced in the respective seminar.

Complementary literature

Will be announced in the seminar.

Course: Seminar Information Engineering and Management**Course key: [SemiIW]****Lecturers:** Christof Weinhardt**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

The student is evaluated based on the written work, a presentation of the results in front of an audience and his contribution to the discussion

Prerequisites

See corresponding module information.

Conditions

Business Engineering/Economics Engineering: Preferably at least one module offered by the institute should have been chosen before attending this seminar.

Learning Outcomes

The student should be able to do a literature review based on a predefined topic in the context of information engineering and management. The approach comprises the identification of relevant literature according to the topic and an analysis as well as an evaluation of the methods presented in the literature. The student learns to present his results in a paper and in front of an audience on a academic level. This process gives him the knowledge and practice for further research work like a master thesis or a doctoral thesis

Content

In the seminar the student should learn to apply the research methods to a predefined topic area. The topics are based on research questions in Information Engineering and Management across different industry sectors. This problem analysis requires a interdisciplinary examination.

Media

- Powerpoint,
- eLearning Platform Ilias
- Software Tools, if necessary

Basic literature

The student will receive the necessary literature for his research topic.

Remarks

- Students from Bachelor and Master Course can visit the seminar. The research topic as well as the evaluation of the work and the presentation will have a different focus between Bachelor and Master Course.
- All the seminars offered at the chair of Prof. Dr. Weinhardt can be chosen. The current topics of the seminars are available at the following homepage: <http://www.im.uni-karlsruhe.de/lehre>.

Course: Seminar in System Dynamics and Innovation**Course key: [SemiIWW]****Lecturers:** Hariolf Grupp, N.N.**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

See corresponding module information.

ConditionsThe courses *Innovation* [26274] and *Applying Industrial Organization* [26287] should preferably be attended beforehand.**Learning Outcomes****Content****Basic literature**

Will be announced at the end of the recess period.

Course: Seminar in International Economy**Course key: [SemiIWW2]****Lecturers:** Jan Kowalski**Credit points (CP):** 3 **Hours per week:** 2/0**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes**Content**

Course: Seminar in Mathematics**Course key: [SemMath]****Lecturers:** Fachvertreter der Fakultät für Mathematik**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes**Content****Basic literature**

Will be announced in the respective seminar.

Complementary literature

Will be announced in the seminar.

Course: Seminar Stochastic Models**Course key: [SemWIOR1]****Lecturers:** Karl-Heinz Waldmann**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations**

The assessment of this course is in form of an examination of the written seminar thesis and a presentation. The final mark is the result of both the paper and its presentation.

Prerequisites

None.

Conditions

None.

Learning Outcomes

In case studies students comprehend stochastic relationships and gain deep knowledge of modelling, evaluation, and optimization of stochastic systems. In group presentations, students learn basic academic presentation and argument skills.

Content

The actual topic as well as the contemporary issues are available online.

Media

Power Point and related presentation techniques.

Basic literature

Will be presented with the actual topic.

Course: Seminar Economic Theory**Course key: [SemWIOR2]****Lecturers:** Clemens Puppe**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. [76](#))**Learning Control / Examinations****Prerequisites**

See corresponding module information.

At least one of the courses *Game Theory I* [25525] and *Welfare Economics* [25517] should have been attended beforehand.**Conditions**

None.

Learning Outcomes**Content****Basic literature**

Will be announced at the end of the recess period.

Course: Seminar in Experimental Economics**Course key: [SemWIOR3]****Lecturers:** Siegfried Berninghaus**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

Term paper and presentation

Prerequisites

See corresponding module information.

A course in the field of Game Theory should be attended beforehand.

Conditions

None.

Learning Outcomes

The seminar wants to deepen the methods of scientific work. Students shall learn to discuss critical the latest research results in Experimental Economics.

Students learn the technical basics of presentation and to argument scientifically. Also rethoric skills shall be amplified.

ContentThe seminar's topic will be announced before the beginning of each semester on the internet (http://www.wior.uni-karlsruhe.de/LS_Berninghaus/Studium/).**Media**

Slides.

Basic literature

Will be announced at the end of the recess period.

Course: Seminar in Game and Decision Theory**Course key: [SemWIOR4]****Lecturers:** Siegfried Berninghaus**Credit points (CP):** 3 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Seminar Module [TVWL3SEM] (S. 76)**Learning Control / Examinations**

Term paper and presentation

Prerequisites

Completion of all 1st and 2nd year modules of the Bachelor Program.

See corresponding module information.

Conditions

None.

Learning Outcomes

The seminar wants to deepen the methods of scientific work. Students shall learn to discuss critical the latest research results in game theory.

Procurement of SQs: Students learn the technical basics of presentation and to argument scientifically. Also rethoric skills shall be amplified.

ContentThe seminar's topic will be announced before the beginning of each semester on the internet (http://www.wior.uni-karlsruhe.de/LS_Berninghaus/Studium/).**Media**

Slides.

Basic literature

Will be announced at the end of the recess period.

Course: Projectseminar**Course key: [SozSem]****Lecturers:** Bernart, Kunz, Pfaff, Haupt, Grenz, Eisewicht**Credit points (CP):** 4 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Sociology/Empirical Social Research [TVWL3SOZ] (S. [74](#))**Learning Control / Examinations****Prerequisites**

None.

Conditions

None.

Learning Outcomes

The student:

- Is able to develop sociological analyses based on the topic of the seminar
- Is able to organize a small survey or to evaluate a given data set on the research problem

Content

In this class, students will conduct small empirical projects.

Course: Explorative-interpretative Project Seminar**Course key: [n.n.]****Lecturers:** Pfadenhauer, Kunz, Grenz, Eisewicht**Credit points (CP):** 2/4 **Hours per week:** 2/0**Term:** Winter-/Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Qualitative Social Research [TVWL3SOZ2] (S. [75](#))**Learning Control / Examinations**

The form of the assessment will be announced at the beginning of the course by the resp. lecturer. Usually at 2 Credit Points it will be an oral presentation, at 4 LP there has to be passed a term paper as well.

The modality of grading will be announced at the beginning of the course by the lecturer. Usually at 2 Credit Points the overall grade consists of the oral presentation and the active participation in the project - at 4 Credit Points it consists of the active participation and the term paper.

Prerequisites

Successful completion of the lecture *Interpretative Social Research Methods* [n.n.].

Knowledge of this lecture is required.

Conditions

The lecture is compulsory in the module and has to be attended.

Learning Outcomes

The student

- is, based on the lecture 'Interpretative Social Research Methods', capable of choosing and applying appropriate explorative-interpretative methods according to a research question and arranging them in a conceptual research design.
- uses this capability to concretise a scientific question and to collect, fixate and evaluate suitable data.

Content

See seminar announcement.

Media

Will be announced in the lecture.

Basic literature

Will be announced in the lecture.

Complementary literature

Will be announced in the lecture.

Course: Public Management**Course key: [n.n.]****Lecturers:** Berthold Wigger**Credit points (CP):** 4.5 **Hours per week:** 2/1**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Public Finance [TVWL3VWL9] (S. 32)**Learning Control / Examinations**

The assessment consists of an 1h written exam following Art. 4, para. 2, clause 1 of the examination regulation. The grade for this course equals the grade of the written exam.

Prerequisites

Basic knowledge of Public Finance is required.

Conditions

None.

Learning Outcomes**Content**

The lecture deals with the economic theory of public sector administration. In the first part, legal issues of public administration in the FRG as well as Weber's classical administration model are presented. Moreover, important elements of and actors in the public administration are characterized. The second part treats basic efficiency-related problems that typically emerge in bureaucracies and public enterprises. Examples are Niskanen's model of monopoly bureaucracy, so-called X-Inefficiency and natural monopolies. The last part introduces major issues of New Public Management (NPM), with a special focus on contract theory. The basic implications of institutional economics are followed by an outline of current reform attempts and their success in Germany.

Complementary literature

- Damkowski, W. and C. Precht (1995): *Public Management*; Kohlhammer.
- Richter, R. and E.G. Furubotn (2003): *Neue Institutionenökonomik*; 3rd ed., Mohr.
- Schedler, K. and I. Proeller (2003): *New Public Management*; 2nd ed., UTB.
- Wigger, B.U. (2006): *Grundzüge der Finanzwissenschaft*; 2nd ed., Springer.

Course: Interpretative Social Research Methods**Course key: [n.n.]****Lecturers:** Pfadenhauer**Credit points (CP):** 4 **Hours per week:** 2/0**Term:** Wintersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Qualitative Social Research [TVWL3SOZ2] (S. [75](#))**Learning Control / Examinations**

The assessment consists of a written exam (according to Section 4 (2), 1 of the examination regulation).

Prerequisites

None.

Conditions

The lecture is obligatory and has to be attended.

Learning Outcomes

The student

- gains a basic overview of the well-established and some of the advanced explorative methods of data collection and interpretative methods of data evaluation.
- acquires basic knowledge of methodology/the philosophy of science.
- is capable of choosing and applying appropriate explorative-interpretative methods according to a research question and arranging them in a conceptual research design.

Course: Additional Course Safety Sciences**Course key: [siwi_wahl]****Lecturers:** Ute Werner**Credit points (CP):** 2-9 **Hours per week:** ???**Term:** Winter-/Sommersemester **Level:** 4**Teaching language:** Deutsch**Part of the modules:** Safety Science II [TVWLINGINTER2] (S. [69](#))**Learning Control / Examinations**

See module description.

Prerequisites

See module description.

Conditions

This course is meant as a place holder for any other course from safety sciences to be chosen by the student in agreement with the module coordinator in order to fulfill the credits requirements of the module.

Learning Outcomes

Cf. to the course actually selected.

Content

Cf. to the course actually selected.

Course: Special Sociology**Course key: [spezSoz]****Lecturers:** Gerd Nollmann, Pfadenhauer, Pfaff, Haupt, Grenz, Eisewicht, Kunz**Credit points (CP):** 2 **Hours per week:** 2**Term:** Winter-/Sommersemester **Level:** 3**Teaching language:** Deutsch**Part of the modules:** Sociology/Empirical Social Research [TVWL3SOZ] (S. 74), Qualitative Social Research [TVWL3SOZ2] (S. 75)**Learning Control / Examinations**

Module *Sociology/Empirical Social Research* [TVWL3SOZ]: The assessment consists of lecture minutes (graded) and an oral presentation (according to Section 4 (2), 3 of the examination regulation).

Modul *Qualitative Social Research* [TVWL3SOZ2]: The assessment consists of an oral exam according to Section 4(2), 2 of the examination regulation.

Prerequisites

None.

Conditions

The form of the lecture has to be attended and must be completed with 2 Credit Points. The form of the lecture must not be swapped by a seminar according sociological theory, according techniques of social research or any other lecture.

Learning Outcomes

The student

- gains basic knowledge of a Special Sociology.
- gains knowledge of a specific problem in the Social Sciences.
- accordingly is capable of questioning further phenomena of the Social Sciences.
- is able to specify, pursue and explain own scientific questions.

Content

The student has the choice of the broad range of course offerings at the institute. In the course specific scientific problems and their debate will be introduced and discussed.

Neubekanntmachung der Studien- und Prüfungsordnung der Universität Karlsruhe (TH) für den Bachelorstudiengang Technische Volkswirtschaftslehre

in der Fassung vom 15. August 2008

Aufgrund von § 34 Absatz 1 Satz 1 des Landeshochschulgesetzes (LHG) vom 1. Januar 2005 hat der Senat der Universität Karlsruhe (TH) am 26. Februar 2007 die folgende Studien- und Prüfungsordnung für den Bachelorstudiengang Technische Volkswirtschaftslehre beschlossen.

Der Rektor hat seine Zustimmung am 06. März 2007 erteilt.

In dieser Satzung ist nur die männliche Sprachform gewählt worden. Alle personenbezogenen Aussagen gelten jedoch stets für Frauen und Männer gleichermaßen.

Inhaltsverzeichnis

I. Allgemeine Bestimmungen

- § 1 Geltungsbereich, Ziele
- § 2 Akademischer Grad
- § 3 Regelstudienzeit, Studienaufbau, Leistungspunkte
- § 4 Aufbau der Prüfungen
- § 5 Anmeldung und Zulassung zu den Prüfungen
- § 6 Durchführung von Prüfungen und Erfolgskontrollen
- § 7 Bewertung von Prüfungen und Erfolgskontrollen
- § 8 Erlöschen des Prüfungsanspruchs, Orientierungsprüfungen, Wiederholung von Prüfungen und Erfolgskontrollen
- § 9 Versäumnis, Rücktritt, Täuschung, Ordnungsverstoß
- § 10 Mutterschutz, Elternzeit
- § 11 Bachelorarbeit
- § 12 Berufspraktikum
- § 13 Zusatzmodule, Zusatzleistungen
- § 14 Prüfungsausschuss
- § 15 Prüfer und Beisitzende
- § 16 Anrechnung von Studienzeiten, Anerkennung von Studienleistungen und Modulprüfungen

II. Bachelorprüfung

- § 17 Umfang und Art der Bachelorprüfung
- § 18 Leistungsnachweise für die Bachelorprüfung
- § 19 Bestehen der Bachelorprüfung, Bildung der Gesamtnote
- § 20 Bachelorzeugnis, Bachelorurkunde, Transcript of Records und Diploma Supplement

III. Schlussbestimmungen

- § 21 Bescheid über Nicht-Bestehen, Bescheinigung von Prüfungsleistungen
- § 22 Aberkennung des Bachelorgrades
- § 23 Einsicht in die Prüfungsakten
- § 24 In-Kraft-Treten

I. Allgemeine Bestimmungen

§ 1 Geltungsbereich, Ziele

(1) Diese Bachelorprüfungsordnung regelt Studienablauf, Prüfungen und den Abschluss des Studiums im Bachelorstudiengang Technische Volkswirtschaftslehre an der Universität Karlsruhe (TH).

(2) Im Bachelorstudium sollen die wissenschaftlichen Grundlagen und die Methodenkompetenz der Fachwissenschaften vermittelt werden. Ziel des Studiums ist die Fähigkeit, das erworbene Wissen berufsfeldbezogen anzuwenden sowie einen konsekutiven Masterstudiengang erfolgreich absolvieren zu können.

§ 2 Akademischer Grad

Aufgrund der bestandenen Bachelorprüfung wird der akademische Grad „Bachelor of Science“ (abgekürzt: „B.Sc.“) für den Bachelorstudiengang Technische Volkswirtschaftslehre verliehen.

§ 3 Regelstudienzeit, Studienaufbau, Leistungspunkte

(1) Die Regelstudienzeit beträgt sechs Semester. Sie umfasst ein Betriebspraktikum, Prüfungen und die Bachelorarbeit.

(2) Die im Studium zu absolvierenden Lehrinhalte sind auf Fächer verteilt. Die Fächer sind in Module gegliedert, die jeweils aus einer Lehrveranstaltung oder mehreren thematisch und zeitlich aufeinander bezogenen Lehrveranstaltungen bestehen. Studienplan oder Modulhandbuch beschreiben Art, Umfang und Zuordnung der Module zu einem Fach sowie die Möglichkeiten, Module untereinander zu kombinieren. Die Fächer und ihr Umfang werden in § 17 definiert.

(3) Der für das Absolvieren von Lehrveranstaltungen und Modulen vorgesehene Arbeitsaufwand wird in Leistungspunkten (Credits) ausgewiesen. Die Maßstäbe für die Zuordnung von Leistungspunkten entsprechen dem ECTS (European Credit Transfer System). Ein Leistungspunkt entspricht einem Arbeitsaufwand von etwa 30 Stunden.

(4) Der Umfang der für den erfolgreichen Abschluss des Studiums erforderlichen Studienleistungen wird in Leistungspunkten gemessen und beträgt insgesamt 180 Leistungspunkte.

(5) Die Leistungspunkte sind in der Regel gleichmäßig auf die Semester zu verteilen.

(6) Lehrveranstaltungen/Prüfungen können auch in englischer Sprache angeboten/abgenommen werden.

§ 4 Aufbau der Prüfungen

(1) Die Bachelorprüfung besteht aus einer Bachelorarbeit, Fachprüfungen und einem Seminar-Modul. Jede der Fachprüfungen besteht aus einer oder mehreren Modulprüfungen. Eine Modulprüfung kann in mehrere Modulteilprüfungen untergliedert sein. Eine Modul(teil)prüfung besteht aus mindestens einer Erfolgskontrolle nach Absatz 2 Nr. 1 und 2. Ausgenommen hiervon sind Seminarmodule.

(2) Erfolgskontrollen sind:

1. schriftliche Prüfungen,
2. mündliche Prüfungen,
3. Erfolgskontrollen anderer Art.

242

Erfolgskontrollen anderer Art sind z. B. Vorträge, Marktstudien, Projekte, Fallstudien, Experimente, schriftliche Arbeiten, Berichte, Seminararbeiten und Klausuren, sofern sie nicht als schriftliche oder mündliche Prüfung in der Modul- oder Lehrveranstaltungsbeschreibung im Modulhandbuch ausgewiesen sind.

(3) In den Fachprüfungen (nach § 17 Absatz 2 und Absatz 3 Nr. 1 bis 7) sind mindestens 50 vom Hundert einer Modulprüfung in Form von schriftlichen oder mündlichen Prüfungen (Absatz 2 Nr. 1 und 2) abzulegen, die restliche Prüfung erfolgt durch Erfolgskontrollen anderer Art (Absatz 2 Nr. 3).

§ 5 Anmeldung und Zulassung zu den Prüfungen

(1) Die Zulassung zu den Prüfungen nach § 4 Absatz 2 Nr. 1 und 2 sowie zur Bachelorarbeit erfolgt im Studienbüro.

Um zu Prüfungen in einem Modul zugelassen zu werden, muss beim Studienbüro eine bindende Erklärung über die Wahl des betreffenden Moduls und dessen Zuordnung zu einem Fach, wenn diese Wahlmöglichkeit besteht, abgegeben werden.

(2) Die Zulassung darf nur abgelehnt werden, wenn

1. der Studierende in einem mit Technischer Volkswirtschaftslehre vergleichbaren oder einem verwandten Studiengang bereits eine Diplomvorprüfung, Diplomprüfung, Bachelor- oder Masterprüfung endgültig nicht bestanden hat, sich in einem Prüfungsverfahren befindet oder den Prüfungsanspruch in einem solchen Studiengang verloren hat oder
2. die in § 18 genannte Voraussetzung nicht erfüllt ist.

In Zweifelsfällen entscheidet der Prüfungsausschuss.

§ 6 Durchführung von Prüfungen und Erfolgskontrollen

(1) Erfolgskontrollen werden studienbegleitend, in der Regel im Verlauf der Vermittlung der Lehrinhalte der einzelnen Module oder zeitnah danach, durchgeführt.

(2) Die Art der Erfolgskontrollen (§ 4 Absatz 2 Nr. 1 bis 3) eines Moduls wird im Studienplan oder Modulhandbuch in Bezug auf die Lehrinhalte der betreffenden Lehrveranstaltungen und die Lehrziele des Moduls festgelegt. Die Art der Erfolgskontrollen, ihre Häufigkeit, Reihenfolge und Gewichtung, die Grundsätze zur Bildung der Modulteilprüfungsnoten und der Modulnote sowie Prüfer müssen mindestens sechs Wochen vor Semesterbeginn bekannt gegeben werden. Im Einvernehmen von Prüfer und Studierendem kann die Art der Erfolgskontrolle auch nachträglich geändert werden. Dabei ist jedoch § 4 Absatz 3 zu berücksichtigen.

(3) Bei unvertretbar hohem Prüfungsaufwand kann eine schriftlich durchzuführende Prüfung auch mündlich oder eine mündlich durchzuführende Prüfung auch schriftlich abgenommen werden. Diese Änderung muss mindestens sechs Wochen vor der Prüfung bekannt gegeben werden.

Bei Einvernehmen zwischen Prüfer und Kandidat kann der Prüfungsausschuss in begründeten Ausnahmefällen auch kurzfristig die Änderung der Prüfungsform genehmigen.

Wird die Wiederholungsprüfung einer schriftlichen Prüfung in mündlicher Form abgelegt, entfällt die mündliche Nachprüfung nach § 8 Absatz 2.

(4) Macht ein Studierender glaubhaft, dass er wegen länger andauernder oder ständiger körperlicher Behinderung nicht in der Lage ist, die Erfolgskontrollen ganz oder teilweise in der vorgeschriebenen Form abzulegen, entscheidet der Prüfungsausschuss über eine alternative Form der Erfolgskontrollen.

(5) Bei Lehrveranstaltungen in englischer Sprache werden die entsprechenden Erfolgskontrollen in der Regel in englischer Sprache abgenommen.

(6) Schriftliche Prüfungen (§ 4 Absatz 2 Nr. 1) sind in der Regel von zwei Prüfern nach § 15 Absatz 2 oder § 15 Absatz 3 zu bewerten. Die Note ergibt sich aus dem arithmetischen Mittel der Einzelbewertungen. Entspricht das arithmetische Mittel keiner der in § 7 Absatz 2 Satz 2 definierten Notenstufen, so ist auf die nächstliegende Notenstufe zu runden. Bei gleichem Abstand ist auf die nächst bessere Notenstufe zu runden. Das Bewertungsverfahren soll sechs Wochen nicht überschreiten. Schriftliche Einzelprüfungen dauern in der Regel mindestens 60 und höchstens 240 Minuten.

(7) Mündliche Prüfungen (§ 4 Absatz 2 Nr. 2) sind von mehreren Prüfern (Kollegialprüfung) oder von einem Prüfer in Gegenwart eines Beisitzenden als Gruppen- oder Einzelprüfungen abzunehmen und zu bewerten. Vor der Festsetzung der Note hört der Prüfer die anderen an der Kollegialprüfung mitwirkenden Prüfer an. Mündliche Prüfungen dauern in der Regel mindestens 15 Minuten und maximal 45 Minuten pro Studierenden.

(8) Die wesentlichen Gegenstände und Ergebnisse der mündlichen Prüfung in den einzelnen Fächern sind in einem Protokoll festzuhalten. Das Ergebnis der Prüfung ist dem Studierenden im Anschluss an die mündliche Prüfung bekannt zu geben.

(9) Studierende, die sich in einem späteren Prüfungszeitraum der gleichen Prüfung unterziehen wollen, werden entsprechend den räumlichen Verhältnissen als Zuhörer bei mündlichen Prüfungen zugelassen. Die Zulassung erstreckt sich nicht auf die Beratung und Bekanntgabe der Prüfungsergebnisse. Aus wichtigen Gründen oder auf Antrag des Studierenden ist die Zulassung zu versagen.

(10) Für Erfolgskontrollen anderer Art sind angemessene Bearbeitungsfristen einzuräumen und Abgabetermine festzulegen. Dabei ist durch die Art der Aufgabenstellung und durch entsprechende Dokumentation sicherzustellen, dass die erbrachte Studienleistung dem Studierenden zurechenbar ist.

(11) Schriftliche Arbeiten im Rahmen einer Erfolgskontrolle anderer Art haben dabei die folgende Erklärung zu tragen: „Ich versichere wahrheitsgemäß, die Arbeit selbstständig angefertigt, alle benutzten Hilfsmittel vollständig und genau angegeben und alles kenntlich gemacht zu haben, was aus Arbeiten anderer unverändert oder mit Abänderungen entnommen wurde.“ Trägt die Arbeit diese Erklärung nicht, wird diese Arbeit nicht angenommen.

(12) Bei mündlich durchgeführten Erfolgskontrollen anderer Art muss neben dem Prüfer ein Beisitzer anwesend sein, der zusätzlich zum Prüfer die Protokolle zeichnet.

§ 7 Bewertung von Prüfungen und Erfolgskontrollen

(1) Das Ergebnis einer Erfolgskontrolle wird von den jeweiligen Prüfern in Form einer Note festgesetzt.

(2) Im Bachelorzeugnis dürfen nur folgende Noten verwendet werden:

1	=	sehr gut (very good)	=	hervorragende Leistung
2	=	gut (good)	=	eine Leistung, die erheblich über den durchschnittlichen Anforderungen liegt
3	=	befriedigend (satisfactory)	=	eine Leistung, die durchschnittlichen Anforderungen entspricht
4	=	ausreichend (sufficient)	=	eine Leistung, die trotz ihrer Mängel noch den Anforderungen genügt
5	=	nicht ausreichend (failed)	=	eine Leistung, die wegen erheblicher Mängel nicht den Anforderungen genügt

244

Für die Bachelorarbeit und die Modulteilprüfungen sind zur differenzierten Bewertung nur folgende Noten zugelassen:

1	=	1.0, 1.3	=	sehr gut
2	=	1.7, 2.0, 2.3	=	gut
3	=	2.7, 3.0, 3.3	=	befriedigend
4	=	3.7, 4.0	=	ausreichend
5	=	4.7, 5.0	=	nicht ausreichend

Diese Noten müssen in den Protokollen und in den Anlagen (Transcript of Records und Diploma Supplement) verwendet werden.

(3) Für Erfolgskontrollen anderer Art kann die Benotung „bestanden“ (passed) oder „nicht bestanden“ (failed) vergeben werden.

(4) Bei der Bildung der gewichteten Durchschnitte der Fachnoten, Modulnoten und der Gesamtnote wird nur die erste Dezimalstelle hinter dem Komma berücksichtigt; alle weiteren Stellen werden ohne Rundung gestrichen.

(5) Jedes Modul, jede Lehrveranstaltung und jede Erfolgskontrolle darf jeweils nur einmal angerechnet werden.

(6) Erfolgskontrollen anderer Art dürfen in Modulteilprüfungen oder Modulprüfungen nur eingerechnet werden, wenn die Benotung nicht nach Absatz 3 erfolgt ist. Die zu dokumentierenden Erfolgskontrollen und die daran geknüpften Bedingungen werden im Studienplan oder Modulhandbuch festgelegt.

(7) Eine Modulteilprüfung ist bestanden, wenn die Note mindestens „ausreichend“ (4.0) ist.

(8) Eine Modulprüfung ist dann bestanden, wenn die Modulnote mindestens „ausreichend“ (4.0) ist. Die Modulprüfung und die Bildung der Modulnote werden im Studienplan oder Modulhandbuch geregelt. Die differenzierten Noten der betreffenden Erfolgskontrollen sind bei der Berechnung der Modulnoten als Ausgangsdaten zu verwenden. Enthält der Studienplan oder das Modulhandbuch keine Regelung darüber, wann eine Modulprüfung bestanden ist, so ist diese Modulprüfung dann bestanden, wenn alle dem Modul zugeordneten Modulteilprüfungen bestanden wurden.

(9) Eine Fachprüfung ist bestanden, wenn die für das Fach erforderliche Anzahl von Leistungspunkten über die im Studienplan oder Modulhandbuch definierten Modulprüfungen nachgewiesen wird.

Die Noten der Module eines Faches gehen in die Fachnote mit einem Gewicht proportional zu den ausgewiesenen Leistungspunkten der Module ein.

(10) Die Ergebnisse der Bachelorarbeit, der Modulprüfungen bzw. der Modulteilprüfungen, der Erfolgskontrollen anderer Art sowie die erworbenen Leistungspunkte werden durch das Studienbüro der Universität erfasst.

(11) Innerhalb der Regelstudienzeit, einschließlich der Urlaubssemester für das Studium an einer ausländischen Hochschule (Regelprüfungszeit), können in einem Fach auch mehr Leistungspunkte erworben werden als für das Bestehen der Fachprüfung erforderlich sind. In diesem Fall werden bei der Festlegung der Fachnote nur die Modulnoten berücksichtigt, die unter Abdeckung der erforderlichen Leistungspunkte die beste Fachnote ergeben.

Die in diesem Sinne für eine Fachprüfung nicht gewerteten Erfolgskontrollen und Leistungspunkte können im Rahmen der Zusatzfachprüfung nach § 13 nachträglich geltend gemacht werden.

(12) Die Gesamtnote der Bachelorprüfung, die Fachnoten und die Modulnoten lauten:

bis 1,5	=	sehr gut
1.6 bis 2.5	=	gut
2.6 bis 3.5	=	befriedigend
3.6 bis 4.0	=	ausreichend

(13) Zusätzlich zu den Noten nach Absatz 2 werden ECTS-Noten für Fachprüfungen, Modulprüfungen und für die Bachelorprüfung nach folgender Skala vergeben:

ECTS-Note	Quote	Definition
A	10	gehört zu den besten 10 % der Studierenden, die die Erfolgskontrolle bestanden haben
B	25	gehört zu den nächsten 25 % der Studierenden, die die Erfolgskontrolle bestanden haben
C	30	gehört zu den nächsten 30 % der Studierenden, die die Erfolgskontrolle bestanden haben
D	25	gehört zu den nächsten 25 % der Studierenden, die die Erfolgskontrolle bestanden haben
E	10	gehört zu den letzten 10 % der Studierenden, die die Erfolgskontrolle bestanden haben
FX		nicht bestanden (failed) – es sind Verbesserungen erforderlich, bevor die Leistungen anerkannt werden
F		nicht bestanden (failed) – es sind erhebliche Verbesserungen erforderlich

Die Quote ist als der Prozentsatz der erfolgreichen Studierenden definiert, die diese Note in der Regel erhalten. Dabei ist von einer mindestens fünfjährigen Datenbasis über mindestens 30 Studierende auszugehen. Für die Ermittlung der Notenverteilungen, die für die ECTS-Noten erforderlich sind, ist das Studienbüro der Universität zuständig.

§ 8 Erlöschen des Prüfungsanspruchs, Orientierungsprüfung, Wiederholung von Prüfungen und Erfolgskontrollen

(1) Die Modulteilprüfung Mikroökonomie (VWL I) im Fach Volkswirtschaftslehre (gemäß § 17 Absatz 2 Nr. 2) und die Modulteilprüfung Statistik I im Fach Statistik (gemäß § 17 Absatz 2 Nr. 7) sind bis zum Ende des Prüfungszeitraums des zweiten Fachsemesters abzulegen (Orientierungsprüfungen).

Wer die Orientierungsprüfungen einschließlich etwaiger Wiederholungen bis zum Ende des Prüfungszeitraums des dritten Fachsemesters nicht abgelegt hat, verliert den Prüfungsanspruch im Studiengang, es sei denn, dass er die Fristüberschreitung nicht zu vertreten hat; hierüber entscheidet der Prüfungsausschuss auf Antrag des Studierenden. Eine zweite Wiederholung von Prüfungen der Orientierungsprüfungen ist ausgeschlossen.

(2) Studierende können eine nicht bestandene schriftliche Prüfung (§ 4 Absatz 2 Nr. 1) einmal wiederholen. Wird eine schriftliche Wiederholungsprüfung mit „nicht ausreichend“ bewertet, so findet eine mündliche Nachprüfung im zeitlichen Zusammenhang mit dem Termin der nicht bestandenen Prüfung statt. In diesem Falle kann die Note dieser Prüfung nicht besser als 4.0 (ausreichend) sein.

246

(3) Studierende können eine nicht bestandene mündliche Prüfung (§ 4 Absatz 2 Nr. 2) einmal wiederholen.

(4) Wiederholungsprüfungen nach Absatz 2 und Absatz 3 müssen in Inhalt, Umfang und Form (mündlich oder schriftlich) der ersten Prüfung entsprechen. Ausnahmen kann der Prüfungsausschuss auf Antrag zulassen. Fehlversuche an anderen Hochschulen sind anzurechnen.

(5) Die Wiederholung einer Erfolgskontrolle anderer Art (§ 4 Absatz 2 Nr. 3) wird im Modulhandbuch geregelt.

(6) Eine zweite Wiederholung derselben schriftlichen oder mündlichen Prüfung ist nur in Ausnahmefällen zulässig. Einen Antrag auf Zweitwiederholung hat der Studierende schriftlich beim Prüfungsausschuss zu stellen. Über den ersten Antrag auf Zweitwiederholung entscheidet der Prüfungsausschuss, wenn er den Antrag genehmigt. Wenn der Prüfungsausschuss diesen Antrag ablehnt, entscheidet der Rektor. Über weitere Anträge auf Zweitwiederholung entscheidet nach Stellungnahme des Prüfungsausschusses der Rektor. Absatz 2 Satz 2 und Satz 3 gilt entsprechend.

Bei nicht bestandener Erfolgskontrolle sind dem Kandidaten Umfang und Frist der Wiederholung in geeigneter Weise bekannt zu machen.

(7) Die Wiederholung einer bestandenen Erfolgskontrolle ist nicht zulässig.

(8) Eine Fachprüfung ist nicht bestanden, wenn mindestens ein Modul des Faches nicht bestanden ist.

(9) Die Bachelorarbeit kann bei einer Bewertung mit „nicht ausreichend“ einmal wiederholt werden. Eine zweite Wiederholung der Bachelorarbeit ist ausgeschlossen.

(10) Ist gemäß § 34 Absatz 2 Satz 3 LHG die Bachelorprüfung bis zum Beginn der Vorlesungszeit des zehnten Fachsemesters einschließlich etwaiger Wiederholungen nicht vollständig abgelegt, so erlischt der Prüfungsanspruch im Studiengang, es sei denn, dass der Studierende die Fristüberschreitung nicht zu vertreten hat. Die Entscheidung darüber trifft der Prüfungsausschuss.

(11) Der Prüfungsanspruch erlischt endgültig, wenn mindestens einer der folgenden Gründe vorliegt:

1. Der Prüfungsausschuss lehnt einen Antrag auf Fristverlängerung nach Absatz 1 oder Absatz 10 ab.
2. Die Bachelorarbeit ist endgültig nicht bestanden.
3. Eine Erfolgskontrolle nach § 4 Absatz 2 Nr. 1 und 2 ist in einem Fach endgültig nicht bestanden.
4. Der Prüfungsausschuss hat dem Studierenden nach § 9 Absatz 5 den Prüfungsanspruch entzogen.

Eine Erfolgskontrolle ist dann endgültig nicht bestanden, wenn keine Wiederholungsmöglichkeit im Sinne von Absatz 2 mehr besteht oder gemäß Absatz 6 genehmigt wird. Dies gilt auch sinngemäß für die Bachelorarbeit.

§ 9 Versäumnis, Rücktritt, Täuschung, Ordnungsverstoß

(1) Der Studierende kann bei Erfolgskontrollen gemäß § 4 Absatz 2 Nr. 1 ohne Angabe von Gründen noch vor Ausgabe der Prüfungsaufgaben zurücktreten. Bei mündlichen Erfolgskontrollen muss der Rücktritt spätestens drei Werktage vor dem betreffenden Prüfungstermin erklärt werden. Die verbindlichen Regelungen zur ordentlichen Abmeldung werden gemäß § 6 Absatz 2 bekannt gegeben. Eine durch Widerruf abgemeldete Prüfung gilt als nicht angemeldet.

(2) Eine Modulprüfung wird mit „nicht ausreichend“ bewertet, wenn der Studierende einen Prüfungstermin ohne triftigen Grund versäumt oder wenn er nach Beginn der Prüfung ohne triftigen

Grund von der Prüfung zurücktritt. Dasselbe gilt, wenn die Bachelorarbeit nicht innerhalb der vorgesehenen Bearbeitungszeit erbracht wird, es sei denn, der Studierende hat die Fristüberschreitung nicht zu vertreten.

(3) Der für den Rücktritt nach Beginn der Prüfung oder das Versäumnis geltend gemachte Grund muss dem Prüfungsausschuss unverzüglich schriftlich angezeigt und glaubhaft gemacht werden. Bei Krankheit des Studierenden oder eines von ihm allein zu versorgenden Kindes oder pflegebedürftigen Angehörigen kann in Zweifelsfällen die Vorlage des Attestes eines vom Prüfungsausschuss benannten Arztes oder ein amtsärztliches Attest verlangt werden.

Die Anerkennung des Rücktritts ist ausgeschlossen, wenn bis zum Eintritt des Hinderungsgrundes bereits Prüfungsleistungen erbracht worden sind und nach deren Ergebnis die Prüfung nicht bestanden werden kann.

Wird der Grund anerkannt, wird ein neuer Termin anberaumt. Die bereits vorliegenden Prüfungsergebnisse sind in diesem Fall anzurechnen.

Bei Modulprüfungen, die aus mehreren Prüfungen bestehen, werden die Prüfungsleistungen dieses Moduls, die bis zu einem anerkannten Rücktritt bzw. einem anerkannten Versäumnis einer Prüfungsleistung dieses Moduls erbracht worden sind, angerechnet.

(4) Versucht der Studierende das Ergebnis einer Erfolgskontrolle durch Täuschung oder Benutzung nicht zugelassener Hilfsmittel zu beeinflussen, gilt die betreffende Erfolgskontrolle als mit „nicht ausreichend“ (5.0) bewertet.

(5) Ein Studierender, der den ordnungsgemäßen Ablauf der Prüfung stört, kann vom jeweiligen Prüfer oder der aufsichtsführenden Person von der Fortsetzung der Modulprüfung ausgeschlossen werden. In diesem Fall wird die betreffende Prüfungsleistung mit „nicht ausreichend“ (5.0) bewertet. In schwerwiegenden Fällen kann der Prüfungsausschuss den Studierenden von der Erbringung weiterer Prüfungsleistungen ausschließen.

(6) Der Studierende kann innerhalb einer Frist von einem Monat verlangen, dass Entscheidungen gemäß Absatz 4 und Absatz 5 vom Prüfungsausschuss überprüft werden. Belastende Entscheidungen des Prüfungsausschusses sind unverzüglich schriftlich mitzuteilen. Sie sind zu begründen und mit einer Rechtsbehelfsbelehrung zu versehen. Vor einer Entscheidung ist Gelegenheit zur Äußerung zu geben.

(7) Näheres regelt die Allgemeine Satzung der Universität Karlsruhe (TH) zur Redlichkeit bei Prüfungen und Praktika.

§ 10 Mutterschutz, Elternzeit

(1) Auf Antrag sind die Mutterschutzfristen, wie sie im jeweils gültigen Gesetz zum Schutz der erwerbstätigen Mutter (MuSchG) festgelegt sind, entsprechend zu berücksichtigen. Dem Antrag sind die erforderlichen Nachweise beizufügen. Die Mutterschutzfristen unterbrechen jede Frist nach dieser Prüfungsordnung. Die Dauer des Mutterschutzes wird nicht in die Frist eingerechnet.

(2) Gleichfalls sind die Fristen der Elternzeit nach Maßgabe des jeweiligen gültigen Gesetzes (BErzGG) auf Antrag zu berücksichtigen. Der Studierende muss bis spätestens vier Wochen vor dem Zeitpunkt, von dem er die Elternzeit antreten will, dem Prüfungsausschuss unter Beifügung der erforderlichen Nachweise schriftlich mitteilen, in welchem Zeitraum er Elternzeit in Anspruch nehmen will. Der Prüfungsausschuss hat zu prüfen, ob die gesetzlichen Voraussetzungen vorliegen, die bei einem Arbeitnehmer den Anspruch auf Elternzeit auslösen würden, und teilt dem Studierenden das Ergebnis sowie die neu festgesetzten Prüfungszeiten unverzüglich mit. Die Bearbeitungszeit der Bachelorarbeit kann nicht durch Elternzeit unterbrochen werden. Die gestellte Arbeit gilt als nicht vergeben. Nach Ablauf der Elternzeit erhält der Studierende ein neues Thema.

§ 11 Bachelorarbeit

(1) Voraussetzung für die Zulassung zur Bachelorarbeit ist, dass der Studierende sich in der Regel im 3. Studienjahr befindet und nicht mehr als eine der Fachprüfungen der ersten drei Fachsemester laut § 17 Absatz 2 noch nachzuweisen ist.

Vor Zulassung sind Betreuer, Thema und Anmeldedatum dem Prüfungsausschuss bekannt zu geben und im Falle einer Betreuung außerhalb der Fakultät für Wirtschaftswissenschaften durch den Prüfungsausschuss zu genehmigen.

Auf Antrag des Studierenden sorgt der Vorsitzende des Prüfungsausschusses dafür, dass der Studierende innerhalb von vier Wochen nach Antragstellung von einem Betreuer ein Thema für die Bachelorarbeit erhält. Die Ausgabe des Themas erfolgt in diesem Fall über den Vorsitzenden des Prüfungsausschusses.

(2) Thema, Aufgabenstellung und Umfang der Bachelorarbeit sind vom Betreuer so zu begrenzen, dass sie mit dem in Absatz 3 festgelegten Arbeitsaufwand bearbeitet werden kann.

(3) Der Bachelorarbeit werden 12 Leistungspunkte zugeordnet. Die empfohlene Bearbeitungsdauer beträgt drei Monate. Die maximale Bearbeitungsdauer beträgt einschließlich einer Verlängerung vier Monate. Die Bachelorarbeit soll zeigen, dass der Studierende in der Lage ist, ein Problem aus seinem Fach selbstständig und in begrenzter Zeit nach wissenschaftlichen Methoden zu bearbeiten. Sie kann auch in englischer Sprache abgefasst werden.

(4) Die Bachelorarbeit kann von jedem Prüfer nach § 15 Absatz 2 vergeben und betreut werden. Soll die Bachelorarbeit außerhalb der Fakultät angefertigt werden, so bedarf dies der Genehmigung des Prüfungsausschusses gemäß Absatz 1. Dem Studierenden ist Gelegenheit zu geben, für das Thema Vorschläge zu machen. Die Bachelorarbeit kann auch in Form einer Gruppenarbeit zugelassen werden, wenn der als Prüfungsleistung zu bewertende Beitrag des einzelnen Studierenden aufgrund objektiver Kriterien, die eine eindeutige Abgrenzung ermöglichen, deutlich unterscheidbar ist und die Anforderung nach Absatz 3 erfüllt.

(5) Bei der Abgabe der Bachelorarbeit hat der Studierende schriftlich zu versichern, dass er die Arbeit selbstständig verfasst hat und keine anderen als die angegebenen Quellen und Hilfsmittel benutzt hat, die wörtlich oder inhaltlich übernommenen Stellen als solche kenntlich gemacht und die Satzung der Universität Karlsruhe (TH) zur Sicherung guter wissenschaftlicher Praxis in der jeweils gültigen Fassung beachtet hat. Wenn diese Erklärung nicht enthalten ist, wird die Arbeit nicht angenommen. Bei Abgabe einer unwahren Versicherung wird die Bachelorarbeit mit „nicht ausreichend“ (5.0) bewertet.

(6) Der Zeitpunkt der Ausgabe des Themas der Bachelorarbeit und der Zeitpunkt der Abgabe der Bachelorarbeit sind beim Prüfungsausschuss aktenkundig zu machen. Das Thema kann nur einmal und nur innerhalb des ersten Monats der Bearbeitungszeit zurückgegeben werden. Ein neues Thema ist binnen vier Wochen zu stellen und auszugeben. Auf begründeten Antrag des Studierenden kann der Prüfungsausschuss die in Absatz 3 festgelegte Bearbeitungszeit um höchstens einen Monat verlängern. Wird die Bachelorarbeit nicht fristgerecht abgeliefert, gilt sie als mit „nicht ausreichend“ bewertet, es sei denn, dass der Studierende dieses Versäumnis nicht zu vertreten hat. § 8 gilt entsprechend.

(7) Die Bachelorarbeit wird von einem Betreuer sowie in der Regel von einem weiteren Prüfer bewertet. Einer der beiden muss Juniorprofessor oder Professor sein. Bei nicht übereinstimmender Beurteilung der beiden Prüfer setzt der Prüfungsausschuss im Rahmen der Bewertung der beiden Prüfer die Note der Bachelorarbeit fest. Der Bewertungszeitraum soll sechs Wochen nicht überschreiten.

§ 12 Berufspraktikum

(1) Während des Bachelorstudiums ist ein mindestens achtwöchiges Berufspraktikum, welches mit acht Leistungspunkten bewertet wird, abzuleisten.

(2) Der Studierende setzt sich dazu in eigener Verantwortung mit geeigneten Unternehmen in Verbindung. Der Praktikant wird von einem Prüfer nach § 15 Absatz 2 und einem Mitarbeiter des Unternehmens betreut.

(3) Am Ende des Berufspraktikums ist dem Prüfer ein kurzer Bericht abzugeben und eine Kurzpräsentation über die Erfahrungen im Berufspraktikum zu halten.

(4) Das Berufspraktikum ist abgeschlossen, wenn eine mindestens achtwöchige Tätigkeit nachgewiesen wird, der Bericht abgegeben und die Kurzpräsentation gehalten wurde. Die Durchführung des Berufspraktikums ist im Studienplan oder Modulhandbuch zu regeln. Das Berufspraktikum geht nicht in die Gesamtnote ein.

§ 13 Zusatzmodule, Zusatzleistungen

(1) Der Studierende kann sich weiteren Prüfungen in Modulen unterziehen. § 3, § 4 und § 8 Absatz 10 der Prüfungsordnung bleiben davon unberührt.

(2) Maximal zwei Zusatzmodule mit jeweils mindestens neun Leistungspunkten werden auf Antrag des Studierenden in das Bachelorzeugnis aufgenommen und entsprechend gekennzeichnet.

Zusatzmodule müssen nicht im Studienplan oder Modulhandbuch definiert sein. Im Zweifelsfall entscheidet der Prüfungsausschuss.

Zusatzmodule werden bei der Festsetzung der Gesamtnote nicht mit einbezogen. Alle Zusatzleistungen werden im Transcript of Records automatisch aufgenommen und als Zusatzleistungen gekennzeichnet. Zusatzleistungen werden mit den nach § 7 vorgesehenen Noten gelistet. Diese Zusatzleistungen gehen nicht in die Festsetzung der Gesamt-, Fach- und Modulnoten ein.

(3) Der Studierende hat bereits bei der Anmeldung zu einer Prüfung in einem Modul diese als Zusatzleistung zu deklarieren.

§ 14 Prüfungsausschuss

(1) Für den Bachelorstudiengang Technische Volkswirtschaftslehre wird ein Prüfungsausschuss gebildet. Er besteht aus fünf stimmberechtigten Mitgliedern: vier Professoren, Juniorprofessoren, Hochschul- oder Privatdozenten, einem Vertreter der Gruppe der wissenschaftlichen Mitarbeiter nach § 10 Absatz 1 Satz 2 Nr. 2 LHG und einem Vertreter der Studierenden mit beratender Stimme. Die Amtszeit der nichtstudentischen Mitglieder beträgt zwei Jahre, die des studentischen Mitglieds ein Jahr.

(2) Der Vorsitzende, sein Stellvertreter, die weiteren Mitglieder des Prüfungsausschusses sowie deren Stellvertreter werden vom Fakultätsrat bestellt, die Mitglieder der Gruppe der wissenschaftlichen Mitarbeiter nach § 10 Absatz 1 Satz 2 Nr. 2 LHG und der Vertreter der Studierenden auf Vorschlag der Mitglieder der jeweiligen Gruppe; Wiederbestellung ist möglich. Der Vorsitzende und dessen Stellvertreter müssen Professor oder Juniorprofessor sein. Der Vorsitzende des Prüfungsausschusses nimmt die laufenden Geschäfte wahr und wird durch ein Prüfungsssekretariat unterstützt.

(3) Der Prüfungsausschuss regelt die Auslegung und die Umsetzung der Prüfungsordnung in die Prüfungspraxis der Fakultät. Er achtet darauf, dass die Bestimmungen der Prüfungsordnung eingehalten werden. Er berichtet regelmäßig dem Fakultätsrat über die Entwicklung der Prüfungen und Studienzeiten sowie über die Verteilung der Fach- und Gesamtnoten und gibt Anregungen zur Reform des Studienplans und der Prüfungsordnung.

(4) Der Prüfungsausschuss kann die Erledigung seiner Aufgaben in dringenden Angelegenheiten und für alle Regelfälle auf den Vorsitzenden des Prüfungsausschusses übertragen.

250

(5) Die Mitglieder des Prüfungsausschusses haben das Recht, an Prüfungen teilzunehmen. Die Mitglieder des Prüfungsausschusses, die Prüfer und die Beisitzenden unterliegen der Amtsverschwiegenheit. Sofern sie nicht im öffentlichen Dienst stehen, sind sie durch den Vorsitzenden zur Verschwiegenheit zu verpflichten.

(6) In Angelegenheiten des Prüfungsausschusses, die eine an einer anderen Fakultät zu absolvierende Prüfungsleistung betreffen, ist auf Antrag eines Mitgliedes des Prüfungsausschusses ein fachlich zuständiger und von der betroffenen Fakultät zu nennender Professor, Juniorprofessor, Hochschul- oder Privatdozent hinzuzuziehen. Er hat in diesem Punkt Stimmrecht.

(7) Belastende Entscheidungen des Prüfungsausschusses sind schriftlich mitzuteilen. Sie sind zu begründen und mit einer Rechtsbehelfsbelehrung zu versehen. Widersprüche gegen Entscheidungen des Prüfungsausschusses sind innerhalb eines Monats nach Zugang der Entscheidung schriftlich oder zur Niederschrift an den Prüfungsausschuss zu richten. Hilft der Prüfungsausschuss dem Widerspruch nicht ab, ist er zur Entscheidung dem für die Lehre zuständigen Mitglied des Rektorats vorzulegen.

§ 15 Prüfer und Beisitzende

(1) Der Prüfungsausschuss bestellt die Prüfer und die Beisitzenden. Er kann die Bestellung dem Vorsitzenden übertragen.

(2) Prüfer sind Hochschullehrer und habilitierte Mitglieder sowie wissenschaftliche Mitarbeiter der jeweiligen Fakultät, denen die Prüfungsbefugnis übertragen wurde. Bestellt werden darf nur, wer mindestens die dem jeweiligen Prüfungsgegenstand entsprechende fachwissenschaftliche Qualifikation erworben hat. Bei der Bewertung der Bachelorarbeit muss ein Prüfer Hochschullehrer sein.

(3) Soweit Lehrveranstaltungen von anderen als den unter Absatz 2 genannten Personen durchgeführt werden, sollen diese zum Prüfer bestellt werden, wenn die Fakultät ihnen eine diesbezügliche Prüfungsbefugnis erteilt hat.

(4) Zum Beisitzenden darf nur bestellt werden, wer einen dem jeweiligen Prüfungsgegenstand entsprechenden akademischen Abschluss erworben hat.

§ 16 Anrechnung von Studienzeiten, Anerkennung von Studienleistungen und Modulprüfungen

(1) Studienzeiten und gleichwertige Studienleistungen und Modulprüfungen, die in gleichen oder anderen Studiengängen an anderen Hochschulen erbracht wurden, werden auf Antrag angerechnet. Gleichwertigkeit ist festzustellen, wenn Leistungen in Inhalt, Umfang und in den Anforderungen denjenigen des Studiengangs im Wesentlichen entsprechen. Dabei ist kein schematischer Vergleich, sondern eine Gesamtbetrachtung vorzunehmen. Bezüglich des Umfangs einer zur Anerkennung vorgelegten Studienleistung und Modulprüfung werden die Grundsätze des ECTS herangezogen; die inhaltliche Gleichwertigkeitsprüfung orientiert sich an den Qualifikationszielen des Moduls.

(2) Werden Leistungen angerechnet, so werden die Noten – soweit die Notensysteme vergleichbar sind – übernommen und in die Berechnung der Modulnoten und der Gesamtnote einbezogen. Falls es sich dabei um Leistungen handelt, die im Rahmen eines Auslandsstudiums erbracht werden, während der Studierende an der Universität Karlsruhe (TH) für Wirtschaftsingenieurwesen immatrikuliert ist, kann der Prüfungsausschuss für ausgewählte Sprachen die Dokumentation anerkannter Studienleistungen im Transcript of Records mit ihrer fremdsprachlichen Originalbezeichnung festlegen. Liegen keine Noten vor, wird die Leistung nicht anerkannt. Der Studierende hat die für die Anrechnung erforderlichen Unterlagen vorzulegen.

(3) Bei der Anrechnung von Studienzeiten und der Anerkennung von Studienleistungen und Modulprüfungen, die außerhalb der Bundesrepublik erbracht wurden, sind die von der Kultusministerkonferenz und der Hochschulrektorenkonferenz gebilligten Äquivalenzvereinbarungen sowie Absprachen im Rahmen der Hochschulpartnerschaften zu beachten.

(4) Absatz 1 gilt auch für Studienzeiten, Studienleistungen und Modulprüfungen, die in staatlich anerkannten Fernstudien und an anderen Bildungseinrichtungen, insbesondere an staatlichen oder staatlich anerkannten Berufsakademien erworben wurden.

(5) Die Anerkennung von Teilen der Bachelorprüfung kann versagt werden, wenn in einem Studiengang mehr als die Hälfte aller Erfolgskontrollen und/oder mehr als die Hälfte der erforderlichen Leistungspunkte und/oder die Bachelorarbeit anerkannt werden sollen.

(6) Zuständig für die Anrechnungen ist der Prüfungsausschuss. Vor Feststellungen über die Gleichwertigkeit sind die zuständigen Fachvertreter zu hören. Der Prüfungsausschuss entscheidet in Abhängigkeit von Art und Umfang der anzurechnenden Studien- und Prüfungsleistungen über die Einstufung in ein höheres Fachsemester.

II. Bachelorprüfung

§ 17 Umfang und Art der Bachelorprüfung

(1) Die Bachelorprüfung besteht aus den Fachprüfungen nach Absatz 2 und Absatz 3, dem Seminarmodul nach Absatz 4 sowie der Bachelorarbeit nach § 11.

(2) In den ersten drei Semestern sind Fachprüfungen aus folgenden Fächern durch den Nachweis von Leistungspunkten in einem oder mehreren Modulen abzulegen:

1. Volkswirtschaftslehre im Umfang von 15 Leistungspunkten,
2. Betriebswirtschaftslehre im Umfang von 15 Leistungspunkten,
3. Informatik im Umfang von 15 Leistungspunkten,
4. Operations Research im Umfang von 9 Leistungspunkten,
5. Recht im Umfang von 10 Leistungspunkten,
6. Mathematik im Umfang von 21 Leistungspunkten,
7. Statistik im Umfang von 10 Leistungspunkten,
8. wahlweise Physik oder Chemie im Umfang von je 16 Leistungspunkten.

Die Module, die ihnen zugeordneten Leistungspunkte und die Zuordnung der Module zu den Fächern sind im Studienplan oder Modulhandbuch festgelegt. Zur entsprechenden Modulprüfung kann nur zugelassen werden, wer die Anforderungen nach § 5 erfüllt.

(3) Im vierten bis sechsten Semester sind Fachprüfungen im Umfang von fünf Modulen mit je neun Leistungspunkten abzulegen. Die Module verteilen sich folgendermaßen auf die Fächer:

1. Volkswirtschaftslehre: zwei Module,
2. Betriebswirtschaftslehre: ein Modul,
3. Wahlbereich: zwei Module aus den Fächern Volkswirtschaftslehre, Betriebswirtschaftslehre, Recht, Soziologie, Informatik, Operations Research, Ingenieurwissenschaften/Naturwissenschaften. Auf die Fächer Recht und Soziologie darf dabei in Summe höchstens ein Modul entfallen.

Die in den Fächern zur Auswahl stehenden Module sowie die diesen zugeordneten Lehrveranstaltungen werden im Studienplan oder Modulhandbuch bekannt gegeben. Der Studienplan oder das Modulhandbuch kann auch Mehrfachmodule definieren, die aus 18 Leistungspunkten (Doppelmodul) bzw. 27 Leistungspunkten (Dreifachmodul) bestehen und für Fachprüfungen nach 1. bis 7. bei in Summe mindestens gleicher Leistungspunktezahl entsprechend anrechenbar sind. Auch die Mehrfachmodule mit ihren zugeordneten Lehrveranstaltungen, Leistungspunkten und Fächern bzw. Fächerkombinationen sind im Studienplan oder Modulhandbuch geregelt.

252

(4) Ferner sind im Rahmen des Seminarmoduls bestehend aus zwei Seminaren mindestens sechs Leistungspunkte nachzuweisen. Neben den hier im Umfang von drei Leistungspunkten vermittelten Schlüsselqualifikationen müssen zusätzliche Schlüsselqualifikationen im Umfang von mindestens drei Leistungspunkten erworben werden.

(5) Als weitere Prüfungsleistung ist eine Bachelorarbeit gemäß § 11 anzufertigen. Der Bachelorarbeit werden 12 Leistungspunkte zugeordnet.

(6) Prüfungen nach § 17 Absatz 3 können in einem Fach nur absolviert werden, wenn eine eventuelle Prüfung dieses Fachs nach § 17 Absatz 2 erfolgreich absolviert wurde. Auf Antrag eines Studierenden kann der Prüfungsausschuss hierzu Ausnahmen genehmigen.

§ 18 Leistungsnachweise für die Bachelorprüfung

Voraussetzung für die Anmeldung zur letzten Prüfung der Bachelorprüfung nach § 17 Absatz 1 ist die Bescheinigung über das erfolgreich abgeleistete Berufspraktikum nach § 12. In Ausnahmefällen, die der Studierende nicht zu vertreten hat, kann der Prüfungsausschuss die nachträgliche Vorlage dieses Leistungsnachweises genehmigen.

§ 19 Bestehen der Bachelorprüfung, Bildung der Gesamtnote

(1) Die Bachelorprüfung ist bestanden, wenn alle in § 17 genannten Prüfungsleistungen mindestens mit „ausreichend“ bewertet wurden.

(2) Die Gesamtnote der Bachelorprüfung errechnet sich als ein mit Leistungspunkten gewichteter Notendurchschnitt. Dabei werden die Noten gemäß § 17 Absatz 3 und 4 sowie der Bachelorarbeit jeweils mit dem doppelten Gewicht der Noten gemäß § 17 Absatz 2 berücksichtigt.

(3) Hat der Studierende die Bachelorarbeit mit der Note 1.0 und die Bachelorprüfung mit einem Durchschnitt von 1.1 oder besser abgeschlossen, so wird das Prädikat „mit Auszeichnung“ (with distinction) verliehen.

§ 20 Bachelorzeugnis, Bachelorurkunde, Transcript of Records und Diploma Supplement

(1) Über die Bachelorprüfung wird nach Bewertung der letzten Prüfungsleistung eine Bachelorurkunde und ein Zeugnis erstellt. Die Ausfertigung von Bachelorurkunde und Zeugnis soll nicht später als sechs Wochen nach der Bewertung der letzten Prüfungsleistung erfolgen. Bachelorurkunde und Bachelorzeugnis werden in deutscher und englischer Sprache ausgestellt. Bachelorurkunde und Zeugnis tragen das Datum der letzten nachgewiesenen Prüfungsleistung. Sie werden dem Studierenden gleichzeitig ausgehändigt. In der Bachelorurkunde wird die Verleihung des akademischen Bachelorgrades beurkundet. Die Bachelorurkunde wird vom Rektor und vom Dekan unterzeichnet und mit dem Siegel der Universität versehen.

(2) Das Zeugnis enthält die in den Fachprüfungen, den zugeordneten Modulprüfungen sowie dem Seminarmodul und der Bachelorarbeit erzielten Noten, deren zugeordnete Leistungspunkte und ECTS-Noten und die Gesamtnote und die ihr entsprechende ECTS-Note. Das Zeugnis ist vom Dekan der Fakultät und vom Vorsitzenden des Prüfungsausschusses zu unterzeichnen.

(3) Weiterhin erhält der Studierende als Anhang ein Diploma Supplement in deutscher und englischer Sprache, das den Vorgaben des jeweils gültigen ECTS User's Guide entspricht. Das Diploma Supplement enthält eine Abschrift der Studiendaten des Studierenden (Transcript of Records).

(4) Die Abschrift der Studiendaten (Transcript of Records) enthält in strukturierter Form alle erbrachten Prüfungsleistungen. Dies beinhaltet alle Fächer, Fachnoten und ihre entsprechende ECTS-Note samt den zugeordneten Leistungspunkten, die dem jeweiligen Fach zugeordneten Module mit den Modulnoten, entsprechender ECTS-Note und zugeordneten Leistungspunkten

sowie die den Modulen zugeordneten Lehrveranstaltungen samt Noten und zugeordneten Leistungspunkten. Aus der Abschrift der Studiendaten soll die Zugehörigkeit von Lehrveranstaltungen zu den einzelnen Modulen und die Zugehörigkeit der Module zu den einzelnen Fächern deutlich erkennbar sein. Angerechnete Studienleistungen sind im Transcript of Records aufzunehmen.

(5) Die Bachelorurkunde, das Bachelorzeugnis und das Diploma Supplement einschließlich des Transcript of Records werden vom Studienbüro der Universität ausgestellt.

III. Schlussbestimmungen

§ 21 Bescheid über Nicht-Bestehen, Bescheinigung von Prüfungsleistungen

(1) Der Bescheid über die endgültig nicht bestandene Bachelorprüfung wird dem Studierenden durch den Prüfungsausschuss in schriftlicher Form erteilt. Der Bescheid ist mit einer Rechtsbehelfsbelehrung zu versehen.

(2) Hat der Studierende die Bachelorprüfung endgültig nicht bestanden, wird ihm auf Antrag und gegen Vorlage der Exmatrikulationsbescheinigung eine schriftliche Bescheinigung ausgestellt, die die erbrachten Prüfungsleistungen und deren Noten sowie die zur Prüfung noch fehlenden Prüfungsleistungen enthält und erkennen lässt, dass die Prüfung insgesamt nicht bestanden ist. Dasselbe gilt, wenn der Prüfungsanspruch erloschen ist.

§ 22 Aberkennung des Bachelorgrades

(1) Hat der Studierende bei einer Prüfungsleistung getäuscht und wird diese Tatsache nach der Aushändigung des Zeugnisses bekannt, so können die Noten der Modulprüfungen, bei denen getäuscht wurde, berichtigt werden. Gegebenenfalls kann die Modulprüfung für „nicht ausreichend“ (5.0) und die Bachelorprüfung für „nicht bestanden“ erklärt werden.

(2) Waren die Voraussetzungen für die Zulassung zu einer Prüfung nicht erfüllt, ohne dass der Studierende darüber täuschen wollte, und wird diese Tatsache erst nach Aushändigung des Zeugnisses bekannt, wird dieser Mangel durch das Bestehen der Prüfung geheilt. Hat der Studierende die Zulassung vorsätzlich zu Unrecht erwirkt, so kann die Modulprüfung für „nicht ausreichend“ (5.0) und die Bachelorprüfung für „nicht bestanden“ erklärt werden.

(3) Vor einer Entscheidung ist Gelegenheit zur Äußerung zu geben.

(4) Das unrichtige Zeugnis ist zu entziehen und gegebenenfalls ein neues zu erteilen. Mit dem unrichtigen Zeugnis ist auch die Bachelorurkunde einzuziehen, wenn die Bachelorprüfung auf Grund einer Täuschung für nicht bestanden erklärt wurde.

(5) Eine Entscheidung nach Absatz 1 und Absatz 2 Satz 2 ist nach einer Frist von fünf Jahren ab dem Datum des Zeugnisses ausgeschlossen.

(6) Die Aberkennung des akademischen Grades richtet sich nach den gesetzlichen Vorschriften.

§ 23 Einsicht in die Prüfungsakten

(1) Nach Abschluss der Bachelorprüfung wird dem Studierenden auf Antrag innerhalb eines Jahres Einsicht in seine Bachelorarbeit, die darauf bezogenen Gutachten und in die Prüfungsprotokolle gewährt.

254

(2) Die Einsichtnahme in die schriftlichen Modulprüfungen bzw. Prüfungsprotokolle erfolgt zu einem durch den Prüfer festgelegten, angemessenen Termin innerhalb der Vorlesungszeit. Der Termin ist mit einem Vorlauf von mindestens 14 Tagen anzukündigen und angemessen bekannt zu geben.

(3) Prüfungsunterlagen sind mindestens fünf Jahre aufzubewahren.

§ 24 In-Kraft-Treten

(1) Diese Studien- und Prüfungsordnung tritt am 1. Oktober 2007 in Kraft.

(2) Gleichzeitig tritt die Prüfungsordnung der Universität Karlsruhe (TH) für den Studiengang Technische Volkswirtschaftslehre vom 22. Dezember 1995, zuletzt geändert durch Satzung vom 17. September 1999 (Amtliche Bekanntmachung der Universität Karlsruhe (TH), Nr. 4 vom 9. März 2000) außer Kraft, behält jedoch ihre Gültigkeit bis zum 30. September 2013 für Prüflinge, die auf Grundlage der Prüfungsordnung der Universität Karlsruhe (TH) für den Studiengang Technische Volkswirtschaftslehre vom 22. Dezember 1995 ihr Studium an der Universität Karlsruhe (TH) aufgenommen haben. Über eine Fristverlängerung darüber hinaus entscheidet der Prüfungsausschuss auf Antrag des Studierenden.

Über einen Antrag an den Prüfungsausschuss können Studierende, die auf Grundlage der Prüfungsordnung der Universität Karlsruhe (TH) für den Studiengang Technische Volkswirtschaftslehre vom 22. Dezember 1995 ihr Studium an der Universität Karlsruhe (TH) aufgenommen haben, ihr Studium auf Grundlage dieser Prüfungsordnung fortsetzen. Der Prüfungsausschuss stellt dabei fest, ob und wie die bisher erbrachten Prüfungsleistungen in den neuen Studienplan integriert werden können und nach welchen Bedingungen das Studium nach einem Wechsel fortgeführt werden kann.

Karlsruhe, den 06. März 2007

*Professor Dr. sc. tech. Horst Hippler
(Rektor)*
