Dear potential Outgoing students,

This document serves as a guideline for you who want to study one exchange semester or two at the University of Bari (Politecnico di Bari). We hope that you will benefit from this guideline and enjoy a great time at Politecnico di Bari!

## Overview

The list of the updated programs can be accessed via this LINK.

On the top of the website, you can see an English flag symbol. It means that the programs with this little symbol will be taught in English (image 1).

CORSI DI LAUREA TRIENNALE E A CICLO UNICO

Where are the English-taught courses?

Basically, they are at the bottom of the website and presented under the subtitle "CORSI DI LAUREA MAGISTRALE" (Master's Degree Program). You need to scroll down and explore by yourself (image 2).

# Are you ready to find suitable courses (Teileistung) to study?

If your answer is yes, choose one program that interests you. Take the program Industrial Design for example.

When you click on the symbol of the program, you are led to another website where the general information is provided. Scroll down to the yellow button which says, "PIANO DI STUDI" (Study Plan), and click on it (image 3). This way, you will access the list of courses that are taught in this Master's program Industrial Design (image 4).

You simply choose the course that you think will be suitable for your study plan. Take the course [2902] DESIGN FOR INTERACTION as an example. The website will be in Italian language, so I recommend using Google Translate to read the "**Obiettivi formative**" (Training Objectives) and other information (image 5).

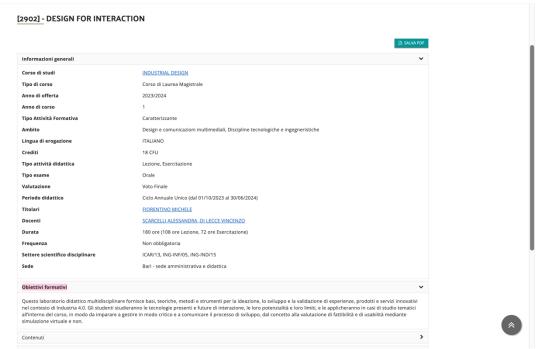

Image 5

# Important notes

- Some courses in the program serve as a Module and have several component courses that we call Teileistung. (but in Italy they call these courses as Module it is just the differences of naming the terms). You will see the list of component courses at the end of the website.
- Not all courses have sufficient information. You can contact the Program Coordinator of the program to ask for specific information. This contact can be found in the **Brochure** (image 3).
